SECTION 1.0 – INTRODUCTION

The purpose of this Initial Study/Mitigated Negative Declaration (IS/MND) is to evaluate the potential environmental impacts associated with implementing the proposed Fleet Service Facility Project. The Project would relocate and consolidate existing County fleet services operations and would not introduce a new public-serving land use.

1.1 PROJECT TITLE

Grand Avenue Fleet Facility Project

1.2 LEAD AGENCY NAME | ADDRESS

County of Orange
OC Public Works

1.4 PROJECT LOCATION

The Project site would be located at 1400 South Grand Avenue in the City of Santa Ana (City) on two lots - Assessor Parcels Numbers (APNs) 014-161-07 and 014-451-01 (Refer to Figure 1 - Project Location and Vicinity). While the site is currently identified by a single address, new addresses will be established for the proposed facilities upon development. The Fleet Services Facility is proposed to be addressed as 1310 South Grand Avenue, and the Facility Operations Building would be addressed as 1324 South Grand Avenue.

1.5 PROJECT SPONSOR'S NAME | ADDRESS

County of Orange
OC Public Works
601 North Ross Street
Santa Ana, CA 92701

1.6 GENERAL PLAN DESIGNATION

The project site is owned by the County of Orange, but is located in the City of Santa Ana (City) and under the City's General Plan has an Industrial (IND) (City General Plan, 2022a) Land Use Designation. The County's General Plan and Zoning Code do not contain a land use designation or zoning for the site.

1.7 ZONING DISTRICTS

The Project site t is zoned as Light Industrial (M1) according to the City zoning map (City 2024).

SECTION 2.0 – PROJECT DESCRIPTION AND ENVIRONMENTAL SETTING

2.1 PROJECT OVERVIEW

This IS/MND No. PP-22-0149 analyzes Orange County's (County) proposed development of a new Fleet Services Facility (Project) that will be a new stand-alone building for the Orange County Public Works Fleet Services Division. The proposed Project will be located at 1400 S. Grand Avenue in the City of Santa Ana (City) (Figure 1). This IS/MND No. PP-24-0149 has been prepared in accordance with the California Environmental Quality Act (CEQA) (Public Resources Code §21000 et seq.) and the State CEQA Guidelines (Title 14, California Code of Regulations, §15000 et seq.) and has determined that preparation of a IS/MND would be appropriate under CEQA.

2.2 PROJECT PURPOSE AND OBJECTIVES

The OC Fleet Services offices are currently located at two locations, 445 Civic Center West and 1102 East Fruit Street in the City. The proposed Project will relocate and consolidate the existing facilities to an Orange County-owned land parcel located adjacent to the County Operations Center located at 1300 South Grand Avenue and a County Data Center located at 1400 South Grand Avenue. The primary purpose of the proposed Project is to streamline operations, reduce redundancy, and enhance service delivery across County departments. The Project would serve the fleet vehicles of the Orange County Public Works OC Fleet Services Division.

The Project aligns with the County's long-term Strategic Facilities Plan goals for sustainable infrastructure and operational excellence. The County's fleet facility will support improved service delivery, reduce operational costs, and enhance workflow by centralizing maintenance and administrative functions. Additional objectives include replacing aging infrastructure, increasing service capacity, and improving vehicle circulation and safety.

The Fleet Services Facility would create a centralized, modern hub for the County's fleet operations and would include one building containing vehicle maintenance bays, administrative staff offices, technician workspaces, and storage spaces. The proposed Fleet Services Facility would also include a future Facility Operations building, a future solar panel canopy, surface parking spaces, extended access road, and a disposal lot. The proposed Fleet Services Facility would have the address 1310 South Grand Avenue, and the future Facility Operations Building would have the address 1324 South Grand Avenue.

The proposed Project would continue to provide the following Core Services, which are currently provided at 445 Civic Center West and 1102 East Fruit Street:

- **Maintenance and Repair Services** - Provide repair services for over 3,000 County-owned vehicles and equipment
 - Manage and accounts for all County fleet costs.
 - Implement vehicle emission reduction measures outlined in the South Coast Air Quality Management District (SCAQMD) mandates.
 - Manage and support the operation of County Compressed Natural Gas Fueling.
- **Air Quality Regulations** - Manage the emissions compliance programs to ensure that all rules and regulations are adhered to and reported on as required by the SCAQMD.

- **Vehicle Operations** - Provide centralized parking and storage space for County fleet vehicles when not in use and would serve as the primary location where employees pick up and return fleet vehicles used in County operations.

2.3 PROJECT BACKGROUND

2.3.1 Location

The Project site would be located at 1400 South Grand Avenue in the City on two lots - APNs 014-161-07 and 014-451-01. While the site is currently identified by a single address, new addresses will be established for the proposed facilities upon development. The Fleet Services Facility is proposed to be addressed as 1310 South Grand Avenue, and the Facility Operations Building would be addressed as 1324 South Grand Avenue.

2.3.2 Environmental Setting

The majority of the existing Project site is a flat, undeveloped parcel consisting primarily consisting of non-native and ruderal vegetation resulting from prior land disturbance. Google Earth aerial imagery from 2017 also indicates the presence of vehicle tire marks across the site, suggesting past vehicular disturbance (Google 2025). The proposed access road area off McFadden Avenue currently consists of a driveway, disturbed vegetation, and a parking lot. The proposed access road from Grand Avenue currently consists of a driveway, a parking lot, and disturbed vegetation.

Soils at the Project site consist primarily of loam and silty clay loam. The site is located in the central portion of the Santa Ana Valley, within a landscape characterized by coastal plains that gradually rise toward the foothills of the Santa Ana Mountains and the historic alluvial drainage system. The Project site lies approximately 3.4 miles east of the Santa Ana River and is represented on the United States Geological Survey (USGS) Tustin, California 7.5-minute topographic quadrangle. Site elevations range from 87 to 99 feet above mean sea level (AMSL).

2.3.3 Project Site Access and Circulation

The proposed Project would extend the existing access roads to provide ingress and egress for the Project site via the existing driveways off McFadden Avenue and South Grand Avenue. The Project would add approximately 50,000 square feet (SF) of paved roadway to the access road. The proposed Project would extend the existing driveway off McFadden Avenue, connecting it to the southernmost Project boundary. The existing access road off South Grand Avenue would extend west on Hobart Street to the Project boundary, intersecting with the access road that connects to McFadden Avenue. (See Figure 2 for the Project Access Road.) Access to the Project site would be restricted to County staff.

2.3.4 Surrounding Land Uses and Sensitive Receptors

The land area to the immediate north, south, and east of the Project site are zoned M1. The land area to the immediate west of the Project site is zoned as Suburban Apartment (R4), Single-Family Residence (R1), Planned Shopping Center (C4), and Open Space Land (O) (see Figure 4).

Surrounding land uses that abut the Project Site are summarized in Table 1.

Table 1. Surrounding Land Uses

Direction	General Plan Land Use Designation	Actual Land Uses
North	Industrial, General Commercial;	Restaurants and shops
East	Industrial, Institutional	Orange County Data Center, other County administrative buildings, industrial buildings
South	Industrial, General Commercial	Shops and industrial buildings
West	Low Density Residential, Commercial	Kennedy Elementary School, residences, plaza center

The nearest sensitive receptor to the Project site is the John F. Kennedy Elementary School that is adjacent to the north side of the Project site. Specifically, the eastern school property line is immediately adjacent to the proposed access road off McFadden Avenue. The southern school property line is immediately adjacent to the Project site boundary and approximately 100 feet north of the proposed Fleet Service Standalone Building (see Figure 1). The southern portion of the school contains a field that is used by students periodically throughout the day.

The Project site is 0.15 miles from Century High School and 0.15 miles from Madison Elementary School.

There are also multi-family homes located 55 feet west of the western Project site boundary.

2.4 PROJECT DESCRIPTION

The proposed Project site will be developed with a new facility that will include one single 45,706 SF building containing vehicle maintenance bays, administrative staff offices, technician workspaces, and tool storage spaces (see Figure 3). Additionally, the Project will include a future 20,000 SF Facility Operations Building, a 10,000 SF solar panel canopy, surface parking spaces, extended access road, and a disposal lot (see Figure 2). The Project would serve the fleet vehicles of the Orange County Public Works OC Fleet Services Division. Table 2. Project Footprint Summary describes all proposed Project features.

Table 2. Project Footprint Summary

Structure	No. of Offices/Areas	SF	Net SF	Notes
Yard requirements				
Bay Requirements	36	496	17,850	Individual bays would be 18 feet wide. 18 of these maintenance bays shall have vehicle lifts.

Structure	No. of Offices/Areas	SF	Net SF	Notes
Bus Bay	2	2,640	5,280	Individual bays would be 24 feet wide. Shall be located at the end of the building to allow for easy access and circulation in and out of the subject bays.
Body Shop	1	4,500	4,500	
Prep Shop	1	1,500	1,500	
Code 3 (Police Vehicles)	1	2,500	2,500	
Metal Fabrication Shop	1	1,500	1,500	
Parts room	1	1,000	1,000	
Alignment Bay	1	480	480	Shall be located in immediate proximity to the metal fabrication and body shops, and parts room for coordination purposes.
Storage and Tools	1	3,000	3,000	
Used Oil Storage	1	200	200	
Common Spaces				One L-shaped stand-alone single-story building.
Restrooms	1	200	200	
Restrooms w/ Locker & Shower – Men/Women	2	500	1,000	
Lunch Room/Breakroom	1	500	500	
Lobby	1	100	100	
Janitor	1	150	150	

Structure	No. of Offices/Areas	SF	Net SF	Notes
Electrical/IDF/Utilities	1	50	50	
Parts room attendant	1	60	60	
Supervisors	1	195	195	
Service writer	1	65	65	
Pedestrian Corridors	1	5,576	5,576	
Total	46		45,706	

Site				
Building Footprint (Yard Requirements and Common Spaces)			45,000	Includes Yard Requirements and Common Spaces Building.
Surface Parking			~ 70,000	Parking spaces for staff, visitor & press vehicles, Delivery Truck Staging, Emergency Vehicle Staging, and Supply Receiving/Loading. Provide centralized parking and storage space for County fleet vehicles when not in use and would serve as the primary location where employees pick up and return fleet vehicles used in County operations.
Access Roads			50,000	See Section 2.4.2 for details.
Disposal Lot (Open space) – 20 Vehicles			5,000	Designated storage space for decommissioned police vehicles pending their sale at auction.
Canopy Space			10,000	Solar Panel Canopy
Facility Operations Building			20,000	
Total Site			200,000	

Structure	No. of Offices/Areas	SF	Net SF	Notes
-----------	-------------------------	----	--------	-------

Note: Utilities will cover 200,000 SF of the entire site

Additional proposed features, which are included within the SF above, include:

- Security Fencing & Control Gates & Bollards.
 - Site Lighting
 - Signage & wayfinding
 - Landscaping – drought tolerant
 - Hardscaping
 - Electric Vehicle (EV) charging stations
-

2.5 CONSTRUCTION

The proposed Project would include sustainable design and construction practices such as the use of recycled materials, highly insulated building envelopes, high efficiency heating and cooling systems, high efficiency lighting and controls, abundant use of natural light and daylight harvesting, water conserving plumbing fixtures, drought tolerant native landscaping, construction waste reduction and recycling, minimization of solar heat gain, indoor air quality, and acoustical design.

The anticipated construction activity/phasing would include the following:

- Mobilization
- Site clearing and demolition
- Ground improvement
- Rough grading and preparing building pad
- Excavation for foundations and utilities
- Placement of underground utilities
- Placement of concrete foundations and slab
- Exterior concrete work
- Windows/doors/interior partitions
- Rough electric/ plumbing/heating, ventilation, and air conditioning (HVAC)/fire sprinklers
- Landscaping
- Finishing electric/plumbing/HVAC/fire sprinklers
- Painting
- Final cleaning

2.5.1 Equipment

Equipment to be used during construction may include the following items:

- Excavators
- Skip Loader
- Bulldozer
- Tractor with Scraper
- Backhoe(s)
- Cement Trucks
- Dump Trucks
- Utility Pick-Up Trucks
- Concrete Finishing Equipment and Tools
- Graders and rollers
- Earth Compactor
- Cranes
- Forklifts
- Drill Rig

It is estimated that an average of 25 workers would be present at the construction site daily (Monday through Friday). In addition, approximately 12 truck trips per day are estimated to be required for site clearing and demolition, excavation, grading and hauling activities and for the delivery of concrete during construction. Delivery of the materials for other construction activities is estimated to require 1 to 3 truck trips per day. To be conservative, it is assumed that all the 12 truck trips, in addition to the 25 construction workers, would enter the site during a.m. peak hour and leave during p.m. peak hour, resulting in a total of 74 vehicle trips per day for the 18-month construction period.

2.5.2 Grading

The total size of the Project site disturbance would be approximately 200,000 SF (4.59 acres). It is anticipated that 5 feet of existing earth material in the currently undeveloped Project site, excluding the proposed access roads, would be excavated and backfilled with engineered fill. Approximately 500 cubic

yards (CY) of soil would be excavated for foundations of the New Fleet Facility. Prior to construction, the Project applicant shall obtain a grading permit from the County.

2.5.3 Utilities

The proposed Project would install new underground utility infrastructure to serve the Project's operations. Utility improvements would include the installation of water, sewer, and storm drain lines, as well as dry utilities such as electricity, natural gas, and telecommunications. All utility lines would be installed below grade within the alignments of proposed access road extensions to minimize surface disturbance and ensure long-term access for maintenance. A solar canopy would also be developed on-site to reduce the Project's demand for the electric grid.

Connections would be made to existing off-site utility mains located adjacent to or near the Project site. Utility installation would occur in coordination with the appropriate service providers and would comply with applicable local, state, and federal regulations. No significant utility demands are anticipated as part of the Project, and all necessary infrastructure upgrades would be constructed as part of the Project to ensure adequate capacity and service.

2.5.4 Landscaping and Hardscaping

All landscaping would comply with Section 7-9-71.2. and Section 7-9-68 of the Orange County Codified Ordinances, which establish standards for water-efficient landscaping. The proposed Project would incorporate native, drought-tolerant landscaping to provide ample green space in parking areas to the maximum extent feasible.

In addition, the proposed Project would include the installation of pleasant, shaded outdoor spaces for visitors and employees. These areas would feature built-in benches or other permanent seating elements integrated into the hardscape design. Hardscaping elements may include paved walkways, plaza areas, and other site furnishings designed to enhance accessibility and create inviting, functional outdoor environments.

2.5.5 Signage

The facility shall have a strong visual presence to convey its intended use. The facility should be easily identifiable as a fleet services building through a combination of building-massing, architectural treatment, building signage and monument signs.

Signage shall be highly visible and clearly direct staff and visitors to their destinations. The design of way finding elements shall incorporate OC Fleet Services branded signage and graphics. The Project would include Americans with Disabilities Act (ADA) compliant plaque-type signage, as required, including restrooms, accessible exterior entry and path of travel, assistive listening system provisions and any other code-required signage. There would also be a highly visible exterior monument or marquee building identification sign (or signs, as dictated by the design) including the building address.

2.5.6 Walls and Fencing

Security fences, controlled access gates, security cameras would be incorporated into the site design. The Design specifications of building walls are provided below:

- Corridors: High impact abuse resistant gypsum board up to 4'-0" high, or equivalent.
- Lobby and Public Areas: High impact abuse resistant gypsum board up to 4'-0" high, or equivalent.
- Restrooms: Ceramic wall tile over full mortar setting bed thin set up to 4'-0" high min.; Gypsum board shall moisture and mold resistant.
- Offices: Gypsum wall board with 4" rubber base
- Corner guards: In all corridors, and in other high abuse areas, subject to the use of rolling cages or carts, wall corners shall be fitted with 3" x 3" x 72" brushed stainless steel corner guards with tapered edges.
- Crash rails: Provide continuous crash rails on all corridor walls, and in other high abuse areas subject to the use of rolling cages or carts. Polyvinyl chloride (PVC) free polyethylene terephthalate glycol (PETG) or equivalent.
- Gypsum board finish: Where gypsum drywall with taped joints is used as a finish material, it shall be covered with a light texture surface (orange peel) except in equipment and storage rooms.

2.5.7 Lighting

Lighting of the proposed structure and associated parking would consist of exterior building-mounted fixtures and pole-mounted lights within the parking area. All lighting would be designed to provide adequate illumination for safety and security while minimizing spillovers onto adjacent properties. Fixtures would be shielded and directed downward, consistent with applicable local lighting. High efficiency lighting and controls and abundant use of natural light and daylight harvesting would be incorporated into the site design.

2.5.8 Drainage

The outdoor yard shall be equipped with hose bibs and floor drains to facilitate cleaning and drainage. The yard surface shall be sloped toward the drains at the maximum grade permitted by applicable codes to ensure that water flows freely to the drains, preventing ponding. This design will allow the area to dry quickly after washing or rainfall without requiring manual sweeping or brooming of water into the drains.

2.5.9 Construction Schedule

Construction of the proposed Project is expected to occur from 2027 to 2029, over an 18-month period. Construction activities will take place from 7:00 a.m. to 8:00 p.m. Monday through Saturday and no construction work will occur on Sundays or Federal holidays, according to the County's Noise Control ordinance.

2.5.10 Project Design Features

The proposed Project would include the following Project Design Feature (PDF):

- PDF-1 Prior to the start of site preparation activities, the Project Applicant shall install a minimum 12-foot-high and approximately 1,200-foot-long concrete masonry unit (CMU) wall at the location of the New Wall as shown above in Figure 2 – Site Plan, that would cover the entire length of the south side of JFK Elementary School and east side of the adjacent homes.

2.6 OPERATION AND MAINTENANCE

Operations of the proposed Project would include similar services provided at the existing OC Fleet Services offices located at 445 Civic Center West and 1102 East Fruit Street in Santa Ana. Operations would primarily consist of providing maintenance and repair services to over 3,000 County-owned vehicles and equipment. These services ensure the safety and longevity of County-owned vehicles while maintaining compliance with vehicle rules and regulations. In addition, the facility would provide parking and storage space for County fleet vehicles when not in use and would serve as the primary location where employees pick up and return fleet vehicles used in County operations. Approximately 50 employees would operate the proposed facility Monday through Friday. The Project will not be operational during the City's nighttime noise ordinance hours (between 10:00 p.m. and 7:00 a.m.).

Maintenance and repair services provided during operation of the proposed Project include, but are not limited to:

- Routine Maintenance Services
 - Oil and Filter Changes
 - Fluid Checks and Top-Offs
 - Tire services
 - Brake System Inspection and Maintenance
 - Wiper Blade Replacement
 - Lighting Inspection and Bulb Replacement
 - Air Filter and Cabin Filter Replacement
- Mechanical repairs
 - Engine Diagnostics and Repairs
 - Transmission Service and Repairs
 - Suspension and Steering Repairs
 - Cooling System Repairs
 - Exhaust System Repairs
 - Fuel System Repairs
 - Electrical System Repairs
 - Drive Train and Axle Repairs
- Preventative Maintenance Programs
 - Scheduled Preventative Maintenance Inspections
 - Mileage-Based Service Intervals
 - Department of Transportation/California Highway Patrol Inspections and Compliance Checks
 - Vehicle Emissions Testing and Compliance
- Other Services

- Vehicle Safety Inspections
- Fleet Management Software Recordkeeping
- Vehicle Washing and Detailing
- Upfitting and Equipment Installation
- Parts Inventory and Procurement Services
- Warranty Repairs

2.6.1 Hazards

Hazards associated with Project operations would involve the use, storage and disposal of:

- Motor oil and used oil
- Antifreeze/coolant
- Brake and transmission fluids
- Solvents and degreasers
- Battery acid
- Fuel and fuel additives
- Oily rags and oil absorbents
- Aerosol cans and cleaning chemicals
- Lead-acid and lithium batteries

Handling and storing of hazardous materials during operations of the proposed Project must comply with all applicable federal, state, and County environmental and safety regulations. Federal regulations pertaining to storing and handling hazardous materials include the Resource Conservation and Recovery Act and Occupational Safety and Health Administration (OSHA) Hazard Communication Standard (29 Code of Federal Regulations [CFR] 1910.1200). State regulations include California Health and Safety Code – Hazardous Materials Business Plan (HMBP) §25500–25520, Title 22 California Code of Regulations (CCR) – Hazardous Waste, and California Fire Code (CFC) Chapter 50 (Hazardous Material). County regulations include County Health Division Certified Unified Program Agency enforcement procedures and Orange County Fire Prevention Code. These regulations are designed to prevent pollution, ensure workers’ safety, and protect public health.

2.7 RELATED PROJECTS

Table 3 below summarizes ongoing related projects within the surrounding vicinity of the Project site.

Table 3. Related Projects

Name	Location	Project Description	Status	Distance from Project Site
Park 55 Industrial Redevelopment Project	1221 & 1231 E. Dyer Road	Applicants propose to demolish two industrial buildings to accommodate three new industrial buildings with new parking, landscaping, and on-site improvements. Building one will be 69,300 SF, building two will be 47,300 SF, and building three will be 59,400	Development Project Review	1.5 mile southwest

Name	Location	Project Description	Status	Distance from Project Site
		SF. This Project requires discretionary review and approval by the Planning Commission and City Council for a Zoning Ordinance Amendment (ZOA) to amend Specific Development 63 (SD-63), and General Plan Amendment (GPA) to redesignate the area from General Commercial (GC) to Industrial/Flex - Low (Flex 1.5). This Project will be subject to sunshine ordinance meeting requirements.		
Warner Redhill Mixed-Use Development (Formerly The Bowery)	2300 S Red Hill Avenue	Arrimus Capital, "Applicant", has applied to redevelop an existing 14.58-acre industrial site currently developed with three large-scale industrial, warehousing, office buildings total 212,121 SF, associated parking areas, and landscaping. The proposed Project will demolish the three industrial buildings and remove all of the existing improvements, including the landscaping, pavement and parking lot and would redevelop of the entire site with 1,100 multi-family residential units and up to 80,000 SF of commercial retail and restaurant space. The development would consist of three mixed-use buildings that would be 6-stories in height and one residential building that would be 5-stories in height. Each of these buildings would have an adjacent parking structure. Two parking structures would provide seven levels of above ground parking and two parking structures would provide six levels of above ground parking. In addition, the Project would develop two one-story retail/restaurant commercial buildings and a surface parking lot along Redhill Avenue. The main vehicular access to the project	Under Construction	1.57 mile southeast

Name	Location	Project Description	Status	Distance from Project Site
		site and parking facilities would be from two driveways on Warner Avenue and one driveway on Redhill Avenue. The Project would provide open space and recreation amenities for residents that would include 5.75 acres of exterior open space recreation area, open space plazas, courtyards, and roof decks, as well as interior amenities and private residential areas.		
Legado at the Met	200 E First American Way	Legado at the Met proposes to construct a 278-unit, 6-story (with lofts) multi-family residential development on a currently vacant property on the northeast corner of MacArthur Boulevard and MacArthur Place. The development will consist of studio, one, two and three-bedroom units ranging in size from approximately 612-1,783 SF. The Project will contain a four-level (one-level above ground and three levels of subterranean), 617 parking-space garage.	Entitlements Approved Grading & Underground plumbing in progress	2 miles southeast
Santa Ana Lyon Towns (Formerly	717 S. Lyon Street	Applicant is proposing a residential development with 51 townhouse units, 15,028 SF of open space and 105 parking spaces. The development will consist of 12 residential buildings with	Under Construction	0.70 mile northeast

Name	Location	Project Description	Status	Distance from Project Site
Warmington Residential)		three-story townhouse units, with eight units proposed as affordable to low-income households. Application is being submitted as a Senate Bill (SB) 330 Project and seeks incentives/concessions. The Project requires a vesting tentative tract map for condominium purposes and a State Density Bonus Agreement for 22.16 du/ac.		
MLC Holdings/Meritage Homes — 2020 East First Street	2020 East First Street	The applicant is proposing to redevelop the 3.72-acre site with 80 three-story townhome units ranging from approximately 1,200 SF to 1,800 SF in size and six live-work units that would be 2,500 SF in size. The units would provide two to four bedrooms and two car garages with either side-by-side or tandem parking configuration. The Project site would have 194 parking spaces including guest parking. As proposed, the Project would require approval of a Tentative Tract Map.	Entitled	1.25 mile northeast
Cabrillo Crossing Townhomes	1814 and 1818 East First Street	Brandywine Homes is proposing to develop two vacant parcels with 35 single-family attached townhomes, six of which are proposed as Live/Work and four as affordable. The proposed townhouse buildings will range in height from 3-4 stories designed with tuck-under parking. The units will range from 2-3 bedrooms and from 1,385 to 2,476 SF in size. The proposed development will require review and approval of a tentative tract map for condominium purposes.	Under Construction 12 units completed 8 units at 80% completed 15 units at 40% completed	1.13 mile northeast

Name	Location	Project Description	Status	Distance from Project Site
The Madison	200 N Cabrillo Park Drive	The Madison is a 6-story mixed use development consisting of five stories of residential and one story of commercial on a vacant 2.79-acre site within the Metro East Overlay (MEMU) planning area. The proposal is to construct 260 residential units including four live/work units, 445 parking spaces, and approximately 6,600 SF of commercial space.	Tolling Agreement approved through June 7, 2021 City Council approved project on June 5, 2018 Applicant filed appeal of PC denial Planning Commission denied project on December 11, 2017 Entitlement Approved (updated: October 11th, 2023)	1.17 mile northeast
Central Pointe Mixed-Use Development	1801 East Fourth Street	The applicant Waterford Property Company proposes to construct a mixed-use Project consisting of 644 multi-family residential units and 15,130 SF of commercial space on an approximately 8-acre site. The project is comprised of two 5-story buildings wrapped around a 7-level parking structure. The Project is located within the Metro East Mixed-Use Overlay District and requires Planning Commission Site Plan Review.	Building Plan Check	1.25 mile northeast

Name	Location	Project Description	Status	Distance from Project Site
Think Together Residential Development	2101 E 4th Street	The Applicant is proposing to construct a 7-story, multi-family building with 270 residential units, approximately 3,700 SF of amenity spaces, 17,709 SF of private open space, 13,504 SF of public open space, and 6,760 SF of non-residential space that can be used for live-work units.	Development Project Review	1.50 mile northeast

Figure 1 - Project Location and Vicinity

Figure 2 – Conceptual Site Plan

Figure 3 – Detailed Site Plan

Figure 4 – Zoning/Land Use

2.8 REQUIRED PERMITS AND APPROVALS

County and other applicable agency approvals¹ required for implementation of the proposed Project will include, but are not limited to, the following:

County of Orange

- Adoption of CEQA Final IS/MND
- Board of Supervisors Approval of Construction Contract and Construction Management
- Approval of Water Quality Management Plan (WQMP)
- Approval of Plans, Specifications, and Estimates (PS&E)
- Temporary Construction Easements (TCEs), if necessary
- Site Plan review
- Grading Permit
- Building Permit

Orange County Fire Authority (OCFA)

- Fire Inspections – Site Access Only

Orange County Transportation Authority (OCTA)

- Encroachment permits

Santa Ana Regional Water Quality Control Board (RWQCB)

- National Pollutant Discharge Elimination System (NPDES) Construction General Permit
- Section 401 Water Quality Certification

State Fire Marshal

- Plans and Specifications

Various Utility Companies

- Encroachment Permits
- Easements

¹ The Proposed Project would be implemented by the County of Orange on County-owned property within the City of Santa Ana. As a governmental project, the County is generally not subject to the City's discretionary land use approval and zoning requirements under California law. Accordingly, no discretionary planning approvals from the City of Santa Ana are required for implementation of the Project.

2.9 CALIFORNIA NATIVE AMERICAN CONSULTATION

The County mailed initial consultation notification letters on August 21, 2025, to the California Native American Tribes listed below pursuant to Assembly Bill (AB) 52. Refer to Section 4.22, Tribal Cultural Resources, of this IS/MND for further discussion.

- Gabrieleño Band of Mission Indians - Kizh Nation
- Juaneño Band of Mission Indians
- Gabrieleño Tongva San Gabriel Band of Mission Indians
- Soboba Band of Luiseño Indians

SECTION 3.0 – ENVIRONMENTAL DETERMINATION

3.1 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would potentially be affected by this project, involving at least one impact that is a “Potentially Significant Impact,” as indicated by the checklists on the following pages. For each of the potentially affected factors, mitigation measures are recommended that would reduce the impacts to less than significant levels.

- | | | |
|---|---|---|
| ☐ Aesthetics | ☐ Agriculture and Forestry Resources | ☐ Air Quality |
| ☐ Biological Resources | ☐ Cultural Resources | ☐ Energy |
| ☒ Geology /Soils | ☐ Greenhouse Gas Emissions | ☐ Hazards & Hazardous Materials |
| ☐ Hydrology /Water Quality | ☐ Land Use / Planning | ☐ Mineral Resources |
| ☐ Noise | ☐ Population / Housing | ☐ Public Services |
| ☐ Recreation | ☐ Transportation | ☐ Tribal Cultural Resources |
| ☐ Utilities /Service Systems | ☐ Wildfire | ☐ Mandatory Findings of Significance |

3.2 DETERMINATION

On the basis of this initial evaluation:

1. I find that the project **could not** have a significant effect on the environment, and a **NEGATIVE DECLARATION** will be prepared. ☐
2. I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A **MITIGATED NEGATIVE DECLARATION** will be prepared. ☒
3. I find the proposed project **may have a significant effect** on the environment, and an **ENVIRONMENTAL IMPACT REPORT** is required. ☐
4. I find that the proposed project **may have a “potentially significant impact” or “potentially significant unless mitigated impact”** on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An **ENVIRONMENTAL IMPACT REPORT** is required, but it must analyze only the effects that remain to be addressed. ☐
5. I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or Negative Declaration pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or Negative Declaration, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required. ☐

Title

SECTION 4.0 – EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including offsite as well as onsite, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if substantial evidence exists that an effect may be significant. If one or more “Potentially Significant Impact” entries are marked when the determination is made, an Environmental Impact Report (EIR) is required.
4. “Negative Declaration: Less Than Significant with Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact.” The lead agency must describe the mitigation measures and briefly explain how they reduce the effect to a less than significant level (mitigation measures from earlier analyses may be cross-referenced).
5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration Section 15063(c)(3)(D) of the CEQA Guidelines. In this case, a brief discussion should identify the following:
 - a. Earlier Analysis Used. Identify and state where they are available for review.
 - b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c. Mitigation Measures. For effects that are “Less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. The explanation of each issue should identify:
 - a. The significance criteria or threshold, if any, used to evaluate each question; and
 - b. The mitigation measure identified, if any, to reduce the impact to less than significant.

Mitigation measures, regulatory compliance measures, and standard conditions are defined below:

- **Regulatory Compliance Measure (RCM):** A regulatory compliance measure is mandated by federal, State, regional, or local statutes and regulations. Because a regulatory compliance measure is derived from a legal requirement, it is applicable to all projects within a particular jurisdiction. A regulatory compliance measure is therefore not necessarily specific to individual projects and can be applicable regardless of whether any potentially significant impacts would occur under a proposed project. Failure to comply with a regulatory compliance measure could result in legal action against a project.
- **Standard Condition (SC):** A standard condition, or standard condition of approval, is established by a lead agency, in this case the County, and can be applicable to any project subject to discretionary approval by the lead agency. A standard condition is therefore not specific to individual projects and can be applicable regardless of whether any potentially significant impacts would occur under a proposed project. Failure to comply with a lead agency's standard condition(s), if applicable, can lead to revocation of permits or other consequences.
- **Mitigation Measure (MM):** As defined in *State CEQA Guidelines* Section 15126.4, a mitigation measure is a measure that could minimize significant adverse impacts of a proposed project and is required when significant adverse impacts could potentially occur. A mitigation measure is fully enforceable through permit conditions, agreements, or other legally-binding instruments, and is often tracked through a Mitigation Monitoring and Reporting Program (MMRP).

SECTION 5.0 – CHECKLIST OF ENVIRONMENTAL ISSUES

5.1 AESTHETICS

1.	AESTHETICS. Except as provided in Public Resources Code Section 21099, would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
(b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
(c)	Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
(d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

5.1.1 Impact Analysis

a) Would the project have a substantial adverse effect on a scenic vista?

No Impact. According to the County's Resources Element of the General Plan, open space is defined as land that is preserved for various purposes, including conservation of natural resources, recreational activities, and the protection of scenic vistas. In addition, the County's Transportation Element designates Viewscape Corridor as routes which traverse a corridor within which unique or unusual scenic resources and aesthetic values are found. Landscape Corridors traverse developed or developing areas and have been designated for special treatment to provide a pleasant driving environment as well as community enhancement.

According to the Resources Element, the Project site is not designated, nor adjacent to a designated open space area that contains scenic vistas (County 2025). Additionally, according to the County's Scenic Highway Plan, there are no Landscape Corridors or Viewscape Corridors within the City, thus there are none within the vicinity of the proposed Project. Therefore, the Project would have no impact on a designated scenic vista and no mitigation is required.

b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. As previously discussed in Section 5.1.1(a), the Project is not within sight of a designated Landscape Corridor or Viewscape Corridor (County 2025). Furthermore, the Project is not within or adjacent to an official or eligible California State Scenic Highway. The nearest Officially Designated scenic highway is a segment of Route 91, located 7.75 miles north of the Project site (Caltrans 2025). The nearest Eligible scenic highway is a segment of Route 1, located 8.5 miles southwest of the Project site (Caltrans 2025). Due to the distance and topography between the Project site and state scenic highways, the Project would not create any visual obtrusions of any trees, rock outcroppings, or

historic buildings within a state scenic highway. No impact would occur towards a state scenic highway and no mitigation is required.

- c) *Would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

Less than Significant Impact. The majority of the existing Project site is a flat, undeveloped parcel consisting primarily consisting of non-native and ruderal vegetation resulting from prior land disturbance. Google Earth aerial imagery from 2017 also indicates the presence of vehicle tire marks across the site, suggesting past vehicular disturbance (Google 2025). The proposed access road area off McFadden Avenue currently consists of an asphalt driveway, disturbed vegetation, and a parking lot. The proposed access road off Grand Avenue currently consists of an asphalt driveway, a parking lot, and disturbed vegetation. Parcels adjacent to the Project site include existing County-owned and operated lots. The overall site area is a County business center, surrounded by train tracks and driveways, roads, commercial area, and school.

Construction activities associated with the Project would require the use of construction equipment and storage of materials on-site. Construction equipment, activities, and construction features that include demolition materials, excavated areas, stockpiled soils, and other materials generated and stored on-site would be present during construction. However, Project construction would be temporary in nature and the equipment used would be visually compatible with the surrounding industrial and commercial uses.

The surrounding vicinity of the Project to the immediate north, south, and east is highly urbanized and industrial. View corridors along Grand Avenue and McFadden Avenue primarily consist of street trees and urban and industrial developments. The Project would not be visible from these public vantage points given the existing intervening development. Proposed development would be visible from John F. Kennedy (JFK) Elementary School located immediately north, and rail transit users and residences located west. However, the Project would be visually compatible in height and appearance to the surrounding industrial and urban development. In addition, the proposed landscaping features, described in Section 2.6.4, would enhance the visual quality of the proposed Project. The proposed 12-foot noise wall would also provide a visual buffer between the Project site and the adjacent railroad, residences, and elementary school.

Construction and operation of the Project would not conflict with the applicable zoning or other regulations governing scenic quality. The proposed Project is consistent with the site's light industrial zoning designation. Therefore, a less than significant impact on visual character and public views would occur and no mitigation is required.

- d) *Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?*

Less than Significant Impact. The Project vicinity exhibits considerable ambient nighttime illumination levels due to the densely developed nature of the area and adjacent properties. Artificial light sources from the surrounding properties include interior and exterior lighting for security and incidental landscape lighting. Automobile headlights, streetlights, and stoplights for visibility and safety

purposes along Grand Avenue and McFadden Avenue contribute to overall ambient lighting levels as well.

Per County Code Section 7-9-67, the all lighting for the Project is required to be designed to confine direct rays to the premises. Lighting of the proposed structure and associated parking would consist of exterior building-mounted fixtures and pole-mounted lights within the parking area. All lighting would be designed to provide adequate illumination for safety and security while minimizing spillover onto adjacent properties. Fixtures would be shielded and directed downward, consistent with applicable local lighting. High efficiency lighting and controls and abundant use of natural light and daylight harvesting would be incorporated into the site design.

With required adherence to the County Code and given the illumination of the Project vicinity under existing conditions, the proposed Project would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the surrounding urban area. Light and glare impacts would be less than significant and no mitigation is required.

5.2 AGRICULTURE & FORESTRY RESOURCES

2.	AGRICULTURE & FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?	☐	☐	☐	☒
(b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
(c)	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
(d)	Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒

2.	AGRICULTURE & FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to nonagricultural use or the conversion of forest land to non-forest use?	☐	☐	☐	☒

5.2.1 Impact Analysis

- a) *Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?*

No Impact. The majority of the existing Project site is a flat, undeveloped parcel consisting primarily of non-native and ruderal vegetation resulting from prior land disturbance. Google Earth aerial imagery from 2017 also indicates the presence of vehicle tire marks across the site, suggesting past vehicular disturbance (Google 2025). The proposed access road area off McFadden Avenue consists of a driveway, disturbed vegetation, and a parking lot. Similarly, the proposed access road off Grand Avenue consists of a driveway, a parking lot, and disturbed vegetation. Parcels adjacent to the Project site include existing County-owned and operated lots. The overall site area consists of a County business center, surrounded by train tracks and driveways, roads, commercial area, and a school.

According to the California Department of Conservation (DOC) Important Farmland Finder map, the Project site is situated within an area designated as Urban and Built-up Land and is not designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (DOC 2022). The existing Project site consists of bare ground and ruderal vegetation, thus does not support agricultural uses. Therefore, no impact would occur towards Farmland and no mitigation is required.

- b) *Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?*

No Impact. According to the DOC California Williamson Act Enrollment Finder, the County did not report any Williamson Act data in 2024 (DOC 2024a). The existing Project site consists of development and ruderal vegetation, thus does not support agricultural uses. No impact would occur towards agricultural or Williamson Act lands and no mitigation is required.

- c) *Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?*

No Impact. The Project site is zoned as M1, does not contain and is not located within an area zoned for forest land, timberland, or timberland zoned Timberland Production, nor would it result in rezoning of these resources. Therefore, no impact to forest land would occur and no mitigation is required.

- d) *Would the project result in the loss of forest land or conversion of forest land to non-forest use?*

No Impact. As described in Threshold c) above, the Project site does not contain forest land and is zoned for light industrial uses. Accordingly, the proposed Project would not result in the loss or conversion of forest land into non-forest use. No impact on forest land would occur and no mitigation is required.

- e) *Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or the conversion of forest land to non-forest use?*

No Impact. As previously discussed in Thresholds a), b), and c) above, the Project site does not contain, is not zoned for, nor is it designated as Farmland or forest land. The Project site is disturbed, consists of ruderal vegetation, thus it does not support agricultural uses or contain forest land. No impact would occur towards Farmland or forest land and no mitigation is required.

5.3 AIR QUALITY

3.	AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
(b)	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
(c)	Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
(d)	Result in other emissions, such as those leading to odors adversely affecting a substantial number of people?	☐	☐	☒	☐

5.3.1 Impact Analysis

- a) *Would the project conflict with or obstruct implementation of the applicable air quality plan?*

Less than Significant Impact. An Air Quality, Energy, and Greenhouse Gas (GHG) Emissions Impact Analysis (Air Report - November 5th, 2025) was prepared by Vista Environmental in support of the

proposed Project (Appendix A). The following discussion summarizes the analysis contained in the Air Report.

The regional plan that applies to the proposed Project is the SCAQMD Air Quality Management Plan (AQMP). Therefore, this section discusses any potential inconsistencies of the proposed Project with the AQMP and discusses whether the proposed Project would interfere with the region's ability to comply with federal and state air quality standards. If the decision-makers determine that the proposed Project is inconsistent, the lead agency may consider project modifications or inclusion of mitigation to eliminate the inconsistency.

The SCAQMD CEQA Handbook states that "New or amended GP Elements (including land use zoning and density amendments), Specific Plans, and significant projects must be analyzed for consistency with the AQMP." Strict consistency with all aspects of the plan is usually not required. A proposed Project is considered consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The SCAQMD CEQA Handbook identifies two key indicators of consistency:

- (1) Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.
- (2) Whether the project will exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

Both criteria are evaluated in the following sections.

Criterion 1 - Increase in the Frequency or Severity of Violations?

Based on the air quality modeling analysis contained in Section 5.3.1, Threshold b) below, short-term regional construction air emissions would not result in significant impacts based on SCAQMD regional thresholds of significance or local thresholds of significance. The ongoing operation of the proposed Project would generate air pollutant emissions that are inconsequential on a regional basis and would not result in significant impacts based on SCAQMD thresholds of significance. The analysis for long-term local air quality impacts showed that local pollutant concentrations would not be projected to exceed the air quality standards. Therefore, a less than significant long-term impact would occur and no mitigation would be required.

Therefore, based on the information provided above, the proposed Project would be consistent with the first criterion.

Criterion 2 - Exceed Assumptions in the AQMP?

Consistency with the AQMP assumptions is determined by performing an analysis of the proposed Project with the assumptions in the 2022 AQMP, which is the most current adopted AQMP. The emphasis on this criterion is to ensure that the analyses conducted for the proposed Project are based on the same forecasts as the AQMP. The 2022 AQMP was developed through use of the planning forecasts provided in the Connect SoCal and 2019 Federal Transportation Improvement Program (FTIP), which was the most current FTIP when the 2022 AQMP was prepared. The 2025 FTIP is the most current FTIP. Local governments are required to use these plans as the basis of their plans for

the purpose of consistency with applicable regional plans under CEQA. For this Project, the City of Santa Ana General Plan Land Use Map defines the assumptions that are represented in AQMP.

The Project site is currently designated as IND in the City General Plan. The proposed Project consists of development of a Fleet Services Building that would consolidate existing operations that occur in two locations into one facility, Facilities Operations Building, solar panel canopy, surface parking spaces, extended access road, and a disposal lot. The proposed Project is an allowed use within the current land use designation. As such, the proposed Project is not anticipated to exceed the AQMP assumptions for the Project site and is found to be consistent with the AQMP for the second criterion.

Based on the above, the proposed Project will not result in an inconsistency with the SCAQMD AQMP. Therefore, a less than significant impact will occur in relation to implementation of the AQMP and no mitigation is required.

- b) *Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?*

Less than Significant Impact. The following discussion summarizes the analysis contained in the Air Report.

The SCAQMD has published a report on how to address cumulative impacts from air pollution: White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution (Appendix A):

“...the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or Environmental Impact Report (EIR). The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for TAC emissions. The project specific (project increment) significance threshold is $HI > 1.0$ while the cumulative (facility- wide) is $HI > 3.0$. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts. Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant.”

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD’s recommended daily thresholds for Project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which the South Coast Air Basin is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds for Project-specific impacts would be considered cumulatively considerable. The following section calculates the potential air emissions associated with the construction and operations of the proposed project and compares the emissions to the SCAQMD standards.

Construction Emissions

The construction activities for the proposed Project are anticipated to include the site preparation and grading of the Project site, building construction of the Fleet Services Building, Facilities Operations Building, and solar panel canopy, paving of the on-site roads, disposal lot, and parking areas, and application of architectural coatings. The CalEEMod model (Version 2022.1, the most recent version) has been utilized to calculate the construction-related emissions from the proposed Project and the input parameters utilized in this analysis have been detailed in Section 8.1 of the Air Report. The thresholds of significance are discussed in Section 9.0 of the Air Report.

The maximum daily regional construction-related criteria for pollutant emissions from the proposed Project are shown in the table below, which corresponds to emissions values during the seasons that maximum daily pollutant emissions occur.

Table 4. Construction-Related Criteria Pollutant Emissions

Season and Year of Construction	Maximum Daily Pollutant Emissions (pounds/day)					
	VOC	NO _x	CO	SO ₂	PM ₁₀	PM _{2.5}
Daily Summer Maximum						
2026	3.20	29.3	29.8	0.05	6.86	3.85
2027	1.11	9.85	14.4	0.03	0.78	0.42
Daily Winter Maximum						
2026	1.16	10.4	14.3	0.03	0.82	0.46
2027	26.1	9.87	14.2	0.03	0.78	0.42
Maximum Daily Construction Emissions	26.1	29.3	29.8	0.05	6.86	3.85
SCQAMD Regional Thresholds	75	100	550	150	150	55
SCAQMD Local Thresholds¹	--	174	1,179	--	12	7
Exceeds Thresholds?	No	No	No	No	No	No

Notes:

¹ The nearest off-site sensitive receptor is the JFK Elementary School that is adjacent to the north side of the project site. According to SCAQMD methodology, all receptors closer than 25 meters are based on the 25-meter threshold. Calculated from SCAQMD's Mass Rate Look-up Tables for 4.59 acres interpolated from two and five acres in Air Monitoring Area 17, Central Orange County.

Source: CalEEMod Version 2022.1.

The table above shows that none of the analyzed criteria pollutants would exceed the regional emissions threshold during construction of the proposed Project. It also shows that the proposed Project's regional construction-related criteria pollutant emissions that consist of both on-site and off-site emissions sources would not exceed the local thresholds, which provides for a worst-case analysis, since the local thresholds are for analyzing only the emissions created on-site. Therefore, a less than significant regional or local air quality impact would occur from construction of the proposed Project.

Operational Emissions

The OC Fleet Services offices are currently located at 445 Civic Center West and 1102 East Fruit Street in the City of Santa Ana. The proposed Project would consist of the relocation and consolidation of the two existing facilities services into the proposed fleet services building. As such, operation of the proposed Project would likely result in a decrease in emissions over existing conditions, with the development of a more-energy efficient building and increased efficiency through consolidation of activities into one facility. However, this analysis does not consider the operational emissions

currently being created by the two existing locations, in order to provide a conservative or worst-case analysis of the proposed Project.

Long-term air quality emissions from the proposed Project would be due to emissions from onsite area sources and energy usage emissions created from the on-going use of the proposed Project. The operations-related regional criteria air quality impacts created by the proposed Project have been analyzed through use of the CalEEMod model and the input parameters utilized in this analysis have been detailed in Section 8.1 of the Air Report. The thresholds of significance are discussed in Section 9.0 of the Air Report. The worst-case summer or winter VOC, NO_x, CO, SO₂, PM₁₀, and PM_{2.5} daily emissions created from the proposed Project's long-term operations have been calculated and are summarized in the table below and the CalEEMod emissions printouts are shown in Appendix A of the Air Report.

Table 5. Operational Criteria Pollutant Emissions

Emissions Source	Pollutant Emissions (pounds/day)					
	VOC	NO _x	CO	SO ₂	PM ₁₀	PM _{2.5}
Mobile Sources ¹	1.30	0.73	7.30	0.02	1.50	0.40
Area Sources ²	2.10	0.03	3.30	<0.01	0.01	<0.01
Energy Usage ³	0.04	0.66	0.56	<0.01	0.05	0.05
Total Emissions	3.44	1.42	11.16	0.02	1.56	0.45
SCQAMD Regional Thresholds	55	55	550	150	150	55
SCAQMD Local Thresholds	--	174	1,179	--	3	2
Exceeds Thresholds?	No	No	No	No	No	No

Notes:

¹ Mobile sources consist of emissions from vehicles and road dust.

² Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.

³ Energy usage consists of emissions from natural gas usage.

Source: Calculated from CalEEMod Version 2022.1.

The data provided in the table above shows that none of the analyzed criteria pollutants would exceed either the regional or local emissions thresholds during operation of the proposed Project. Therefore, a less than significant regional and local air quality impact would occur from operation of the proposed Project.

Local Carbon Monoxide Hotspot Impacts from Project-Generated Vehicular Trips

Carbon Monoxide (CO) is the pollutant of major concern along roadways because the most notable source of CO is motor vehicles. For this reason, CO concentrations are usually indicative of the local air quality generated by a roadway network and are used as an indicator of potential local air quality impacts. Local air quality impacts can be assessed by comparing future without and with project CO levels to the state and federal CO standards of 20 ppm over one hour or 9 ppm over 8 hours.

At the time of the SCAQMD 1993 Handbook, the Air Basin was designated nonattainment under the California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS) for CO. With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations in the Air Basin and in the state have steadily declined. In 2007, the Air Basin was designated as an attainment for CO under both the CAAQS and NAAQS. SCAQMD conducted a CO hot spot analysis for attainment at the busiest intersections in Los Angeles during the peak morning and afternoon periods and did not

predict a violation of CO standards. Since the nearby intersections to the proposed Project are much smaller with less traffic than what was analyzed by the SCAQMD, no local CO Hotspot is anticipated to be created from the proposed Project and no CO Hotspot modeling was performed. Therefore, a less than significant long-term air quality impact is anticipated to local air quality with the on-going use of the proposed Project.

Therefore, the proposed Project would not result in a cumulatively considerable net increase of any criteria pollutant; impacts would be less than significant and no mitigation is required.

c) Would the project expose sensitive receptors to substantial pollutant concentrations?

Less than Significant Impact. The following discussion summarizes the analysis contained in the Air Report.

The local concentrations of criteria pollutant emissions produced in the nearby vicinity of the proposed Project, which may expose sensitive receptors to substantial concentrations have been calculated above in Threshold b) for both construction and operations, which are discussed separately below. The discussion below also includes an analysis of the potential impacts from toxic air contaminant emissions. The nearest sensitive receptor to the project site is the JFK Elementary School that is adjacent to the north side of the Project site. There are also multi-family homes that are as near as 95 feet west of the Project site.

Construction-Related Sensitive Receptor Impacts

The construction activities for the proposed Project are anticipated to include the site preparation and grading of the Project site, building construction of the Fleet Services Building, Facilities Operations Building, and solar panel canopy, paving of the onsite roads, disposal lot, and parking areas, and application of architectural coatings. Construction activities may expose sensitive receptors to substantial pollutant concentrations of localized criteria pollutant concentrations and from toxic air contaminant emissions created from onsite construction equipment, which are described below.

Local Criteria Pollutant Impacts from Construction

The local air quality impacts from construction of the proposed Project have been analyzed above in Threshold b) and found that the construction of the proposed Project would not exceed the local NO_x, CO, PM₁₀ and PM_{2.5} thresholds of significance. Therefore, construction of the proposed Project would create a less than significant construction-related impact on local air quality and no mitigation would be required.

Toxic Air Contaminants Impacts from Construction

The greatest potential for toxic air contaminant (TAC) emissions would be related to diesel particulate matter (DPM) emissions associated with heavy equipment operations during construction of the proposed Project. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of “individual cancer risk”. “Individual Cancer Risk” is the likelihood that a person exposed to concentrations of toxic air contaminants over a 70-year lifetime will contract cancer, based on the use of standard risk-assessment methodology (Appendix A). It should be noted that the most current cancer risk assessment methodology recommends analyzing a 30-year exposure period for the nearby sensitive receptors (Appendix A).

Given the relatively limited number of heavy-duty construction equipment, the varying distances that construction equipment would operate to the nearby sensitive receptors, and the short-term construction schedule, the proposed Project would not result in a long-term (i.e., 30 or 70 years) substantial source of toxic air contaminant emissions and corresponding individual cancer risk. In addition, California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 regulates emissions from off-road diesel equipment in California. This regulation limits idling of equipment to no more than 5 minutes, requires equipment operators to label each piece of equipment and provide annual reports to California Air Resources Board (CARB) of their fleet's usage and emissions. This regulation also requires systematic upgrading of the emission Tier level of each fleet, and currently no commercial operator is allowed to purchase Tier 0, Tier 1 or Tier 2 equipment. In addition to the purchase restrictions, equipment operators need to meet fleet average emissions targets that become more stringent each year between years 2014 and 2023. By January 2026, 75 percent or more of all contractors' equipment fleets must be Tier 2 or higher and by January 2029, 100 percent of all equipment fleets must be Tier 2 or higher. Therefore, no significant short-term DPM impacts would occur during construction of the proposed Project and no mitigation is required.

Operations-Related Sensitive Receptor Impacts

The on-going operations of the proposed Project may expose sensitive receptors to substantial pollutant concentrations of local CO emission impacts from the project-generated vehicular trips and from the potential local air quality impacts from on-site operations. The following analyzes the vehicular CO emissions. Local criteria pollutant impacts from on-site operations, and TAC impacts.

Local CO Hotspot Impacts from Project-Generated Vehicle Trips

CO is the pollutant of major concern along roadways because the most notable source of CO is motor vehicles. For this reason, CO concentrations are usually indicative of the local air quality generated by a roadway network and are used as an indicator of potential impacts to sensitive receptors. The analysis provided above in Threshold b) shows that no local CO Hotspots are anticipated to be created at any nearby intersections from the vehicle traffic generated by the proposed Project. Therefore, operation of the proposed Project would result in a less than significant exposure of off-site sensitive receptors to substantial pollutant concentrations and no mitigation is required.

Local Criteria Pollutant Impacts from On-site Operations

The local air quality impacts from the operation of the proposed Project would occur from on-site sources such as architectural coatings and landscaping equipment. The analysis provided above in Threshold b) found that the operation of the proposed Project would not exceed the local NO_x, CO, PM₁₀ and PM_{2.5} thresholds of significance. Therefore, the on-going operations of the proposed Project would create a less than significant operations-related impact on local air quality due to on-site emissions and no mitigation would be required.

Operations-Related TAC Impacts

The proposed Project consists of development of a new fleet services facility that would generate DPM emissions from the servicing of diesel vehicles and from diesel vehicle trips to and from the Project site. PM from diesel exhaust is the predominant TAC in most areas and according to The California Almanac of Emissions and Air Quality 2013 Edition, prepared by CARB, about 80 percent of the outdoor TAC cancer risk is from diesel exhaust (Appendix A). Some chemicals in diesel exhaust, such as benzene and formaldehyde have been listed as carcinogens by State Proposition 65 and the Federal Hazardous Air Pollutants program.

According to the 2020 CEQA California Environmental Quality Act Statute & Guidelines (State CEQA Guidelines), Appendix M provides the performance standards for infill projects eligible for streamlined reviews and states the following:

“Significant sources of air pollution” include airports, marine ports, rail yards and distribution centers that receive more than 100 heavy-duty truck visits per day, as well as stationary sources that are designated major by the Clean Air Act.”

In addition, the Health Risk Assessments (HRA) for Proposed Land Use Project, prepared by California Air Pollution Control Officers Association (CAPCOA), July 2009, details that a potentially significant impact may occur if sensitive receptors are placed within 1,000 feet of distribution centers that generate more than 100 trucks deliveries per day. As detailed above in Section 8.1, the proposed Project consists of the consolidation of two existing facilities that are located within 2 miles of the project site into the proposed facility. The new fleet services facility will relocate approximately 150 daily vehicle trips (in and out). According to Orange County Public Works (OCPW) staff, less than 5 percent of the fleet is diesel-powered or approximately 7.5 daily trips to the Project site would be from diesel-powered vehicles, which is well below both the state CEQA Guidelines and CAPCOA guidelines provided above for when a potentially significant health risk impact would occur from diesel vehicle emissions. Based on the above reasons it can be reasonably concluded that the DPM emissions created from the on-going operation of the proposed Project would result in a less than significant TAC impact to the nearby sensitive receptors and no mitigation would be required.

- d) *Would the project result in other emissions, such as those leading to odors adversely affecting a substantial number of people?*

Less than Significant Impact. The following discussion summarizes the analysis contained in the Air Report.

Individual responses to odors are highly variable and can result in a variety of effects. Generally, the impact of an odor results from a variety of factors such as frequency, duration, offensiveness, location, and sensory perception. The frequency is a measure of how often an individual is exposed to an odor in an ambient environment. The intensity refers to an individual's or group's perception of the odor strength or concentration. The duration of an odor refers to the elapsed time over which an odor is experienced. The offensiveness of the odor is the subjective rating of the pleasantness or unpleasantness of an odor. The location accounts for the type of area in which a potentially affected person lives, works, or visits; the type of activity in which he or she is engaged; and the sensitivity of the impacted receptor.

Sensory perception has four major components: detectability, intensity, character, and hedonic tone. The detection (or threshold) of an odor is based on a panel of responses to the odor. There are two types of thresholds: the odor detection threshold and the recognition threshold. The detection threshold is the lowest concentration of an odor that will elicit a response in a percentage of the people that live and work in the immediate vicinity of the project site and is typically presented as the mean (or 50 percent of the population). The recognition threshold is the minimum concentration that is recognized as having a characteristic odor quality, this is typically represented by recognition by 50 percent of the population. The intensity refers to the perceived strength of the odor. The odor character is what the substance smells like. The hedonic tone is a judgment of the pleasantness or unpleasantness of the odor. The hedonic tone varies in subjective experience, frequency, odor character, odor intensity, and duration. Potential odor impacts have been analyzed separately for construction and operations below.

Construction-Related Odor Impacts

Potential sources that may emit odors during construction activities include the application of coatings such as asphalt pavement, paints and solvents and emissions from diesel equipment. Standard construction requirements that limit the time of day when construction may occur as well as SCAQMD Rule 1108 that limits Volatile Organic Compounds (VOC) content in asphalt and Rule 1113 that limits the VOC content in paints and solvents would minimize odor impacts from construction. As such, the objectionable odors that may be produced during the construction process would be temporary and would not likely be noticeable for extended periods of time beyond the Project site's boundaries. Through compliance with the applicable regulations that reduce odors and due to the transitory nature of construction odors, a less than significant odor impact would occur and no mitigation would be required.

Operations-Related Odor Impacts

The proposed Project would consist of development of a Fleet Services Building, Facilities Operations Building, solar panel canopy, surface parking spaces, extended access road, and a disposal lot. Potential sources that may emit odors during the on-going operations of the proposed Project would primarily occur from the trash storage areas and from the use of fuels associated with servicing vehicles. Pursuant to City regulations, permanent trash enclosures that protect trash bins from rain as well as limit air circulation would be required for the trash storage areas. The use of fuels on-site will be required to meet SCAQMD's Rule 461 requirements that require the use of dispensing equipment that minimizes vapor and liquid leaks that will also minimize odor impacts. Due to the distance of the nearest receptors from the project site (immediately adjacent JFK Elementary School and multi-family homes 55 feet west) and through compliance with SCAQMD's Rules 402 and 461, City trash storage regulations, a less than significant impact related to odors would occur during the on-going operations of the proposed Project and no mitigation is required.

5.4 BIOLOGICAL RESOURCES

4.	BIOLOGICAL RESOURCES. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
(b)	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
(c)	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
(d)	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
(e)	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
(f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

5.4.1 Impact Analysis

a) *Would the project have a substantial adverse effect, either directly or through habitat modification, on any species identified as candidate, sensitive or special status species in local or regional plans, policies or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

Less than Significant. Impact. On October 28, 2025, a Biological Reconnaissance Survey Report (Biology Report) was prepared by Chambers Group in support of the proposed Project. The Biology Report is attached as Appendix B.

Based on the literature review (see Section 4.1 of the Biology Report) and field survey conducted for the Project, there are 44 special status plant species with a potential to occur on or within the vicinity of the Project site based on habitat present and a 5-mile radius of the Project site. Ten of these 44 special status plant species are federal- and/or state-listed as endangered or threatened.

Of the 44 plant species, 26 species are considered absent from the proposed Project site due to lack of suitable habitat, lack of suitable soil types and/or typically occur outside the elevation range on-site. Twelve of the 44 plant species can occur in disturbed, meadow and grassland habitat, but are

considered absent from the proposed Project site due to level of repeated disturbance in the area and lack of observation on-site. Six of the 44 plant species are presumed to be locally extinct and are absent from the proposed Project site because there is a lack of suitable habitat, depleted seed bank in the surrounding area, and recent records are greater than 5 miles away from the proposed Project site and/or are more than 40 years old. Of the 44 special status plant species evaluated for their potential occurrence on the Project site, all 44 species were not observed and are considered absent from the site.

Based on the literature review and field survey conducted for the Project, 14 special status wildlife species have potential to occur on or within the vicinity of the Project site. These special status wildlife species are federal- and/or state-listed as endangered or threatened, federally proposed threatened, or state candidate endangered. None of these sensitive wildlife species were observed within the Project site.

Six of the 14 wildlife species are considered absent because of the highly developed, urbanized conditions of the Project site and lack of native vegetation or natural habitat. Three of the 14 wildlife species are considered absent because the Project site lacks required hydrological features such as streams, rivers, riparian corridors, or standing freshwater habitats. Two of the 14 wildlife species are considered absent because the site lacks the appropriate soil conditions, host plants, or specific habitat features required for the species are not present. Two of the 14 wildlife species are considered absent because the Project site lacks roosting, foraging, or structural habitat needed by the species. One of the 14 wildlife species, Burrowing Owl (*Athene cunicularia*), has a low potential to occur because the Project site contains minimal marginal habitat features such as small debris piles and landscape outside of the Project site boundaries to provide foraging opportunities. There are ground squirrel burrows on-site, but they are active with squirrels and in pore areas for a burrowing owl to occupy.

The Project site primarily contains non-native, ornamental, ruderal vegetation that provides little to no habitat value for special status plants or wildlife species. Furthermore, no special status species were identified during the field survey. Therefore, a less than significant impact towards sensitive species would occur and no project specific mitigation is required.

- b) *Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

No Impact. According to the Biology Report, the Project site is fully characterized by disturbed ruderal vegetation, ornamental landscaping, and developed areas. The Project site's ruderal vegetation occupies approximately 5.92 acres and occurs primarily within the southwestern field and the north-south corridor between buildings. These areas consist of disturbed, compacted soils supporting pioneering herbaceous species adapted to frequent disturbance, including Bermuda grass, cheeseweed, Russian thistle, and Johnsongrass. Smaller patches of ornamental landscaping, totaling about 0.61 acre, are present along the southern, eastern, and northwestern perimeters of the site and are characterized by non-native horticultural species such as silk floss tree, star jasmine, pomegranate, bougainvillea, and carrotwood. In addition, developed areas account for approximately 4.99 acres of the site and include man-made features such as buildings, parking areas, and two asphalt road entrances located off Grand Avenue and McFadden Avenue, with a developed parking lot adjacent to the ruderal vegetation on the eastern portion of the site. No California Department of Fish and Wildlife (CDFW) or United States Department of Fish and Wildlife (USFWS) designated riparian

habitat, other sensitive natural communities, natural drainage features or intact native plant communities are present on the Project site, and were not observed during the field survey.

The USFWS designates critical habitat for the coastal California gnatcatcher approximately 4.7 miles from the Project site. However, no suitable habitat for coastal California gnatcatcher occurs within or adjacent to the Project site due to the highly developed and urbanized condition surrounding the area. No impacts on USFWS critical habitat will occur as a result of the Project and no mitigation is required.

Due to the lack of riparian habitat or other sensitive natural community within the Project site, no impact would occur and no mitigation is required.

- c) *Would the project have a substantial adverse effect on state or federally protected wetlands (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

No Impact. The Project would not have a substantial adverse effect on state or federally protected wetlands or other aquatic resources through direct removal, filling, hydrological interruption, or other means. As discussed in the Biology Report, the Project site does not contain wetlands or other potential jurisdictional waters and is fully developed, with no natural drainages, washes, or evidence of an ordinary high-water mark (OHWM). A site inspection conducted on October 28, 2025, identified no surface hydrology features, including channels, depressions, or culverts, that would support wetland or hydric conditions, and no wetland indicator vegetation, hydric soils, or wetland hydrology indicators were observed. Vegetation across the site consists primarily of developed areas and non-native landscaping typical of an urbanized environment. Two concrete storm drains located along the southern entrance road are engineered features designed to convey runoff and do not function as natural watercourses. Because no wetlands or aquatic resources are present on the Project site, no permits or approvals under Section 404 of the Clean Water Act or Section 1602 of the California Fish and Game Code would be required, and implementation of the Project would not result in impacts to state- or federally protected wetlands. No mitigation is required.

- d) *Would the project Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

No Impact. As discussed in the Biology Report, the Project site does not function as a wildlife movement corridor. The proposed Project would construct a new Fleet Facility and provide County vehicle maintenance services. The surrounding area is highly urbanized and fragmented, bordered by train tracks, residential developments, schools, and commercial businesses. These existing barriers substantially limit wildlife movement and connectivity. As a result, the site does not provide a continuous or viable pathway for wildlife species to travel between habitat areas. No impact towards migratory species would occur and no mitigation is required.

- e) *Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*
- f) *Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservancy Conservation Plan, or other approved local, regional, or state habitat conservation plan?*

e & f) No Impact. The proposed Project does not conflict with any local policies or ordinances protecting biological resources as the General Plan Resources Element defers to the County of Orange (Central/Coastal) Natural Community Conservation Plan (NCCP)/Habitat Conservation Plan (HCP). The Project site does not contain sensitive natural communities, wetlands, or riparian habitat subject to protection under the Orange County General Plan or NCCP/HCP (County 1996). There are no existing trees within the Project construction site boundary, thus no tree removal is proposed. The site is fully developed and characterized by disturbed ruderal vegetation, ornamental landscaping, and existing infrastructure, and the proposed Project would occur entirely within these previously disturbed areas. No impacts regarding a tree preservation policy, NCCP, or HCP would occur and no mitigation is required.

5.5 CULTURAL RESOURCES

5.	CULTURAL RESOURCES. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☐	☒
(b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☒	☐
(c)	Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

5.5.1 Impact Analysis

- a) *Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?*

No Impact. A Cultural Resources Survey Letter Report (Appendix C: Cultural Report – October 10, 2025) was prepared by Chambers Group in support of the proposed Project.

Chambers Group requested a records search from the California Historical Resources Information System (CHRIS) South-Central Coastal Information Center (SCCIC) at California State University, Fullerton, on May 30, 2025. A study area with a half-mile radius of the Project site was requested to provide additional context to the Project site and surrounding area. The SCCIC returned the records search results on June 26, 2025, providing information on all documented cultural resources and previous archaeological investigations within a half-mile radius of the Project site. Resources consulted during the records search conducted by the SCCIC included the National Register of Historic Places (NRHP), California Historical Landmarks (CHL), California Points of Historical Interest (CPHI), the California State Historic Resources Inventory, local registries of historic properties, and a review of available Sanborn Fire Insurance maps as well as historical photographs, maps, and aerial imagery.

The study also included a search for potential prehistoric and/or historic burials (human remains) evident in previous site records and/or historical maps.

The cultural resource assessment contained in the Cultural Report also included a field survey of the entire proposed Project site. The survey consisted of a systematic surface inspection site transected at no more than 15-meter intervals to ensure that any evidence of surface-exposed cultural materials and/or evidence of paleontological resources could be identified.

Based on the archival research, record searches, and field survey discussed in the Cultural Report, there are no historic resources within the Project site. Therefore, no impact would occur or would cause a substantial adverse change in the significance of a historical resource. No mitigation is required.

- b) *Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?*

Less than Significant Impact. As discussed in the Cultural Report, based on the review of available historic maps and aerial imagery, Chambers Group archaeologists observed that the Project site was accessible by dirt road by 1896. The Project site was in use as orchard/agricultural land with small residential buildings associated by 1931, and continued in this arrangement until approximately 1970, when the first of the current buildings situated on Project parcels were developed. Subsequent development removed the remaining evidence of agricultural use by 1981.

Based on the CHRIS record search, no archaeological resources have been documented within the Project site. While no archaeological resources were apparent during the survey effort, there remains a potential for encountering buried cultural resources. Given the historic context, these are more likely to be historic-period materials associated with the prior use of the area for agricultural development such as agricultural equipment or related refuse. As the parcels associated with the Project site once supported at least two ranch houses and a well, it is possible that both infrastructure supporting and waste from the ranches could be encountered. Though not indicated during the survey, these items may take the form of refuse pits, foundations, building debris, or irrigation system items such as supply pipes, or drains.

In the event that archaeological resources are inadvertently discovered during Project construction activities, the County's Standard Conditions of Approval (SC) CUL-1 and CUL-2 requires that construction be halted in the vicinity of the find, a qualified archaeologist evaluates the discovery, appropriate notifications be made, and any necessary mitigation or treatment measures be implemented in accordance with applicable regulations. Impacts would be less than significant with implementation of SC's CUL-1 and CUL-2 and no mitigation is required.

SC CUL-1 The County shall retain the services of a Qualified Archaeologist, meeting the Secretary of the Interior Standards, and County requirements. The Qualified Archaeologist shall remain on call throughout the Project. The Qualified Archaeologist or cultural resources specialist working under the direction of the Qualified Archaeologist, shall provide an initial cultural resources sensitivity training (which may be incorporated within a more comprehensive or multi-discipline Worker Environmental Awareness Program [WEAP]) to inform all construction personnel prior to construction activities about the proper procedures in the event of an archaeological discovery. The cultural resources sensitivity training is necessary to inform the construction personnel of the potential to encounter buried cultural resources and provide examples of potential cultural materials that may

be encountered. The training shall be held in conjunction with the Project's initial on-site safety meeting and shall explain the applicable protocols, procedures, and legal basis for the protection of significant archaeological resources.

SC CUL-2 In the event of an inadvertent discovery of potential cultural resources (artifacts or features) during ground-disturbing activities, construction activities within a 50-foot radius of the discovery shall be halted while the Qualified Archaeologist assesses the find. The archaeologist shall evaluate the find in accordance with federal, State, and local guidelines, including those set forth in the California Public Resources Code Section 21083.2, to assess the significance of the find and identify avoidance or other measures as appropriate. If the resource is determined to be significant or unique through significance evaluation, and avoidance is not possible, appropriate mitigation or treatment shall be established and implemented. These might include a cultural resources mitigation and monitoring plan, treatment plans, or data recovery programs. All monitoring or associated plans would be prepared and implemented under the direction of the Qualified Archaeologist. All required close-out reporting or archaeological site records would be completed in accordance with the Office of Historic Preservation's guidelines and submitted to the appropriate CHRIS Information Center (IC), as necessary.

c) *Would the project disturb any human remains, including those interred outside of formal cemeteries?*

Less than Significant Impact. No historic burial sites have been documented within the Project site or vicinity (Appendix C). In the event that human remains are discovered during ground-disturbing activities, the proposed Project would be subject to California Health and Safety Code § 7050.5, CEQA Guidelines § 15064.5, and California PRC § 5097.98. If human remains are found during ground-disturbing activities, State of California Health and Safety Code § 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC § 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner shall be notified immediately. If the human remains are determined to be prehistoric, the County Coroner shall notify the Native American Heritage Commission (NAHC), which shall notify a most likely descendant (MLD). The MLD shall complete the inspection of the site within 48 hours of notification and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials (Appendix C). Compliance with existing regulations and Regulatory Compliance Measure (RCM) CUL-1 pertaining to the discovery of human remains would result in less than significant impacts. No mitigation is required.

Regulatory Compliance Measure:

RCM CUL-1 Human Remains. In the event that human remains are encountered on the project site, work within 50 feet of the discovery shall be redirected and the County Coroner notified immediately consistent with the requirements of CCR Section 15064.5(e). State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code (PRC) Section 5097.98. If the remains are determined to be Native American, the County Coroner shall notify the NAHC, which shall determine and notify a Most Likely Descendant (MLD). With the permission of the property owner, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and non-destructive analysis of human remains and items associated with Native American burials.

Consistent with CCR Section 15064.5(d), if the remains are determined to be Native American and an MLD is notified, the County shall consult with the MLD as identified by the NAHC to develop an agreement for treatment and disposition of the remains. Prior to the issuance of grading permits, the Director of the Orange County Public Works Department, or designee, shall verify that all grading plans specify the requirements of CCR Section 15064.5(e), State Health and Safety Code Section 7050.5, and PRC Section 5097.98, as stated above.

5.6 ENERGY

6.	ENERGY Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
(b)	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

5.6.1 Impact Analysis

- a) *Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?*

Less than Significant Impact. The following discussion summarizes the analysis contained in the Air Report (Appendix A).

The proposed Project would impact energy resources during construction and operation. Energy resources that would be potentially impacted include electricity, natural gas, and petroleum-based fuel supplies and distribution systems. This analysis includes a discussion of the potential energy impacts of the proposed Project, with particular emphasis on avoiding or reducing inefficient, wasteful, and unnecessary consumption of energy. A general definition of each of these energy resources is provided below.

See Appendix A for definitions of electricity, natural gas, and petroleum-based fuels. In 2024, Orange County consumed 19,225 Gigawatt-hours per year of electricity and 561.7 million Therms of natural gas (Appendix A). In 2023, 1,150 million gallons of gasoline and 62 million gallons of diesel were sold in Orange County (Appendix A).

The following section calculates the potential energy consumption associated with the construction and operations of the proposed Project and provides a determination if any energy utilized by the proposed Project is wasteful, inefficient, or unnecessary consumption of energy resources.

Construction Energy

The proposed Project would consume energy resources during construction in three general forms:

1. Petroleum-based fuels used to power off-road construction vehicles and equipment on the Project site, construction worker travel to and from the Project site, as well as delivery and haul truck trips (e.g. hauling of demolition material to off-site reuse and disposal facilities).
2. Electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power and any needed electricity associated with the conveyance of water that would be used during Project construction for dust control (supply and conveyance); and,
3. Energy used in the production of construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction-Related Electricity

During construction the proposed Project would consume electricity to construct the proposed structures. Electricity would be supplied to the Project site by Southern California Edison (SCE) and would be obtained from the existing electrical lines in the vicinity of the Project site. The use of electricity from existing power lines rather than temporary diesel or gasoline powered generators would minimize impacts on fuel consumption. Electricity consumed during project construction would vary throughout the construction period based on the construction activities being performed. Various construction activities include electricity associated with the conveyance of water that would be used during project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power. Such electricity demand would be temporary, nominal, and would cease upon the completion of construction. Overall, construction activities associated with the proposed Project would require limited electricity consumption that would not be expected to have an adverse impact on available electricity supplies and infrastructure. Therefore, the use of electricity during project construction would not be wasteful, inefficient, or unnecessary.

Since there are currently power lines in the vicinity of the Project site, it is anticipated that only nominal improvements would be required to SCE distribution lines and equipment with development of the proposed Project. Compliance with City's guidelines and requirements would ensure that the proposed Project fulfills its responsibilities relative to infrastructure installation, coordinates any electrical infrastructure removals or relocations, and limits any impacts associated with construction of the Project. Construction of the Project's electrical infrastructure is not anticipated to adversely affect the electrical infrastructure serving the surrounding usages or utility system capacity.

Construction-Related Petroleum Fuel Use

Petroleum-based fuel usage represents the highest amount of transportation energy potentially consumed during construction, which would be utilized by both off-road equipment operating on the Project site and on-road automobiles transporting workers to and from the Project site and on-road trucks transporting equipment and supplies to the Project site.

The off-road construction equipment fuel usage was calculated through use of the off-road equipment assumptions and fuel use assumptions shown in Section 8.2 of the Air Report (Appendix A), which found that construction of the proposed Project would consume 7,334 gallons of gasoline and 46,907 gallons of diesel fuel. This equates to 0.0006 percent of the gasoline and 0.076 percent of the

diesel used annually in Orange County. As such, the construction-related petroleum use would be nominal, when compared to current county-wide petroleum usage rates.

Construction activities associated with the proposed Project would be required to adhere to all state and SCAQMD regulations for off-road equipment and on-road trucks, which provide minimum fuel efficiency standards. As such, construction activities for the proposed Project would not result in the wasteful, inefficient, and unnecessary consumption of energy resources. Impacts regarding transportation energy would be less than significant. Development of the Project would not result in the need to manufacture construction materials or create new building material facilities specifically to supply the proposed Project. It is difficult to measure the energy used in the production of construction materials such as asphalt, steel, and concrete. It is reasonable to assume that the production of building materials such as concrete, steel, etc., would employ all reasonable energy conservation practices in the interest of minimizing the cost of doing business.

Operational Energy

The on-going operation of the proposed Project would require the use of energy resources for multiple purposes including, but not limited to, HVAC, refrigeration, lighting, appliances, and electronics. Energy would also be consumed during operations related to water usage, solid waste disposal, landscape equipment, and vehicle trips. However, the Project would relocate and consolidate existing County fleet services operations and would not introduce a new public-serving land use. Therefore, there is no net increase in energy usage expected to occur during operations.

Operations-Related Electricity

Operation of the proposed Project would result in consumption of electricity at the Project site. As detailed in Section 8.2 of the Air Report, the proposed Project would consume 821,132 kilowatt-hours per year of electricity, which does not account for the electricity that will be produced by the proposed 10,000 SF solar canopy. This equates to 0.0043 percent of the electricity consumed annually in Orange County. As such, the operation-related electricity use would be nominal, when compared to current electricity usage rates in the County.

In addition, the proposed Project would comply with all federal, state, and City requirements related to the consumption of electricity, including CCR Title 24, Part 6 Building Energy Efficiency Standards and CCR Title 24, Part 11: California Green Building Standards. The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into the proposed structures, including enhanced insulation, use of energy efficient lighting and appliances, water and space heating systems, as well as requiring a variety of other energy-efficiency measures to be incorporated into the proposed Project. Therefore, it is anticipated that the proposed Project will be designed and built to minimize electricity use and that existing and planned electricity capacity and electricity supplies would be sufficient to support the proposed Project's electricity demand. Thus, the Project would not result in the wasteful or inefficient use of electricity and no project-specific mitigation measures would be required.

Operations-Related Natural Gas

Operation of the proposed Project would result in increased consumption of natural gas at the Project site. As detailed in Section 8.2 of the Air Report, the proposed Project would consume 2,463 MBTU per year of natural gas. This equates to 0.0044 percent of the natural gas consumed annually in

Orange County. As such, the operations-related natural gas use would be nominal, when compared to current natural gas usage rates in the County.

In addition, the proposed Project would comply with all federal, state, and City requirements related to the consumption of natural gas, that includes CCR Title 24, Part 6 Building Energy Efficiency Standards and CCR Title 24, Part 11: California Green Building Standards. The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into the proposed Project, including enhanced insulation as well as use of efficient natural gas appliances and HVAC units. Therefore, it is anticipated that the proposed Project will be designed and built to minimize natural gas use and that existing and planned natural gas capacity and natural gas supplies would be sufficient to support the proposed Project's natural gas demand. Thus, impacts with regard to natural gas supply and infrastructure capacity would be less than significant and no project-specific mitigation measures would be required.

Operations-Related Vehicular Petroleum Fuel Usage

Operation of the proposed Project would result in increased consumption of petroleum-based fuels related to vehicular travel to and from the Project site. As detailed in Section 8.2 of the Air Report, the proposed Project would consume 24,777 gallons of gasoline per year from vehicle travel. This equates to 0.02 percent of the gasoline consumed annually in Orange County. As such, the operations-related petroleum use would be nominal, when compared to current petroleum usage rates

In addition, the proposed Project would comply with all federal, state, County and City requirements related to the consumption of transportation energy that includes CCR Title 24, Part 10 California Green Building Standards that require conduit to be installed in the proposed parking areas for future EV charging stations. Therefore, it is anticipated that the proposed Project will be designed and built to minimize transportation energy through the promotion of the use of electric-powered vehicles, and it is anticipated that existing and planned capacity and supplies of transportation fuels would be sufficient to support the proposed Project's demand. Thus, impacts with regard transportation energy supply and infrastructure capacity would be less than significant and no project-specific mitigation measures would be required.

In conclusion, the proposed Project would comply with regulatory compliance measures outlined by the State, County and City related to air quality (see section 4.0 of the Air Report), energy (see section 5.0 of the Air Report), and GHGs (see section 6.0 of the Air Report). Additionally, the proposed Project would be constructed in accordance with all applicable County Building and Fire Codes. Therefore, the proposed Project would not result in the wasteful, inefficient, or unnecessary consumption of energy resources during Project construction or operation; impacts would be less than significant and no mitigation is required.

- b) *Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?*

Less than Significant Impact. The following discussion summarizes the analysis contained in the Air Report (Appendix A).

The proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. The applicable energy plans for the proposed Project include the *Santa Ana General Plan Conservation Element*, adopted April 2022, and the County of Orange General Plan,

Chapter 6 Resources Element, September 13, 2005, that provides an Energy Resources Component. The City and County plans are analyzed separately below.

City of Santa Ana General Plan Conservation Element

The proposed Project's consistency with the energy conservation policies from the City's General Plan are shown in the table below.

Table 6. Proposed Project Compliance with the City General Plan Energy Policies

General Plan Policy	Proposed Project Implementation Actions
Goal CN-3: Energy Resources Reduce consumption of and reliance on nonrenewable energy and support the development and use of renewable energy sources.	
Policy CN-3.1: Interagency Coordination. Consult with regional agencies and utility companies to pursue energy efficiency goals and expand renewable energy strategies.	Not Applicable. This policy is for the City to implement.
Policy CN-3.2: Education Programs. Support education programs to provide information on energy conservation and alternatives to nonrenewable energy sources.	Not Applicable. This policy is for the City to implement.
Policy CN-3.3: Development Patterns. Promote energy-efficient development patterns by clustering mixed use developments and compatible uses adjacent to public transportation.	Consistent. The project will provide employment opportunities in close proximity to existing residential sites and there is existing Orange County Transportation Authority (OCTA) bus stops adjacent to the Project site on McFadden Avenue and Grand Avenue.
Policy CN-3.4: Site Design. Encourage site planning and subdivision design that incorporates the use of renewable energy systems.	Consistent. The proposed Project will include a 10,000 SF solar PV system.
Policy CN-3.5: Landscaping. Promote and encourage the planting of native and diverse tree species to improve air quality, reduce heat island effect, reduce energy consumption, and contribute to carbon mitigation with special focus in environmental justice areas.	Consistent. The proposed Landscape Plan will be designed to include native and diverse tree species that will be located adjacent to the onsite road system as well in the proposed parking lots, in order to reduce the heat island effect and associated reduction in energy consumption.
Policy CN-3.6: Life Cycle Costs. Encourage construction and building development practices that use renewable resources and life cycle costing in construction and operating decisions.	Consistent. The proposed Project will be constructed using renewable resources based on the Title 24 Part 6 and Part 11 building standards that require construction materials to be reused or recycled.
Policy CN-3.7: Energy Conservation Design and Construction. Incorporate energy conservation features in the design of new construction and rehabilitation projects.	Consistent. The proposed structures will be designed to meet or exceed the 2025 Title 24 Part 6 building standards that require the incorporation of energy conservation features into the structures.
Policy CN-3.8: Energy-Efficient Public Facilities. Promote and encourage efficient use of energy and the conservation of available resources in the design, construction, maintenance, and operation of public facilities, infrastructure, and equipment.	Consistent. The proposed public facilities will be designed to meet or exceed the 2025 Title 24 Part 6 building standards that require the incorporation of energy conservation features into the structures.
Policy CN-3.9: Energy Generation in Public Facilities. Encourage and support the generation, transmission, use, and storage of locally distributed renewable energy in	Consistent. The proposed public facility will include a 10,000 SF solar PV canopy system.

General Plan Policy	Proposed Project Implementation Actions
order to promote energy independence, efficiency, and sustainability.	
Policy CN-3.10: Energy Conservation in Public Projects. Work with businesses and contractors that use energy-efficient practices in the provision of services and equipment for City construction projects.	Not Applicable. This policy is for City construction projects.
Policy CN-3.11: Energy-Efficient Transportation Infrastructure. Continue to support public and private infrastructure for public transportation such as bus routes, rail lines, and the OC Streetcar.	Consistent. There is existing OCTA bus stops adjacent to the Project site on McFadden Avenue and Grand Avenue.
Source: City of Santa Ana, 2022.	

As shown above, the proposed Project would be consistent with the energy conservation policies from the General Plan Conservation Element. Therefore, the proposed Project would not conflict with the City's plan for renewable energy or energy efficiency. Impacts would be less than significant.

County of Orange General Plan Resource Element

The proposed Project's consistency with the applicable energy-related policies in the County's General Plan are shown in the table below.

Table 7. Proposed Project Compliance with County General Plan Energy Policies

General Plan Energy Policy	Proposed Project Consistency with General Plan Policies
Policy 1 – Land Use. To plan urban land uses with a balance of residential, industrial, commercial, and public land uses as set forth in the Land Use Element.	Consistent. The proposed Project is an allowed use under the current land use designation of Industrial. In addition, the proposed Project is in close proximity to existing residential and retail uses, which will reduce energy usage by reducing vehicle trips.
Policy 2 – Energy Resource Development. To encourage and actively support the efficient use and optimum development of energy resources in the County consistent with sound resource management practices.	Not Applicable. This policy is only applicable for the development of energy resources. No known energy resources (i.e. oil wells or mining) exist on the Project site.
Policy 3 – Energy Conservation. To encourage and actively support the utilization of energy conservation measures in all new and existing structures in the County.	Consistent. The proposed Project has been designed to exceed the state's Title 24 energy efficiency standards and will incorporate several energy-efficiency design features into the Project.
Policy 4 – Transportation. To provide incentives for transportation system management programs and support regional public transportation programs that reduce energy consumption.	Not Applicable. This policy is only applicable to the County to develop regional transportation programs.
Policy 5 – Energy Financing. To examine the benefits of local government financing programs that promote energy conservation and development through cooperative public/private efforts.	Not Applicable. This policy is only applicable to the County to develop government financing programs that promote energy conservation.
Policy 6 – Alternative Energy Systems. To encourage the use of alternative energy systems and to the extent feasible, remove the regulatory barriers to their implementation.	Consistent. The proposed Project will include a 10,000 SF solar PV canopy system and will provide electric vehicle charging stations.

General Plan Energy Policy	Proposed Project Consistency with General Plan Policies
Policy 7 – Solar Access. To support and encourage voluntary efforts to provide solar access opportunities in new developments.	Consistent. The proposed Project will include a 10,000 SF solar PV canopy system.

Source: County of Orange, 2005.

As shown above, the proposed Project would be consistent with all applicable energy-related policies provided in the County’s General Plan. Therefore, the proposed Project would not conflict with the County’s plan for renewable energy or energy efficiency. Energy impacts would be less than significant and no mitigation is required.

5.7 GEOLOGY AND SOILS

7.	GEOLOGY AND SOILS. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
	i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
	ii) Strong seismic ground shaking?	☐	☐	☒	☐
	iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
	iv) Landslides?	☐	☐	☐	☒
(b)	Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
(c)	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
(d)	Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
(e)	Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
(f)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

5.7.1 Impact Analysis

- a) *Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:*
- i) *Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.*

Less than Significant Impact. According to the Department of Conservation (DOC) California Geologic Survey Earthquake Zones of Required Investigation, the Project site is not located within an Alquist-Priolo Earthquake Fault Zone (DOC 2024b). The nearest Alquist-Priolo Earthquake Fault is located 8.5 miles southwest of the Project site. Given this distance, it is reasonable to assume that the risk of loss, injury, or death involving rupture of a known earthquake fault is low.

In addition, the Project must be designed and constructed in accordance with the California Building Standards Code (California Code of Regulations, Title 24), which incorporates seismic design provisions of the current California Building Code (CBC) and American Society of Civil Engineers Standard 7 (ASCE 7). These standards require that buildings be engineered to withstand anticipated seismic forces for their location, occupancy type, and soil conditions, including specific detailing for lateral force-resisting systems, foundation design, and structural ductility. Compliance with these requirements ensures that, even in the seismically active regions of Southern California, structures are designed to minimize the risk of loss, injury, or death in the event of ground rupture or shaking. Impacts related to rupture of a known earthquake fault would be less than significant and no mitigation is required.

- ii) *Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?*

Less than Significant Impact. As stated above in Section 5.7.1 Threshold a)i), the proposed Project is not located in the immediate vicinity of a state-designated Alquist-Priolo Earthquake Fault Zone and, therefore, is not considered susceptible to surface fault rupture hazards. However, the Project site is located within Southern California, which contains various active and inactive faults and is generally considered a seismically active region.

The closest surface trace of a potentially active fault to the Project site is the Newport-Inglewood-Rose-Canyon Fault Zone, which is located approximately 6 miles southwest of the Project site (DOC 2015).

Given the location of the nearest fault zone and general seismicity of Southern California, the Project site could be subject to strong ground shaking in the event of an earthquake. However, as previously discussed, the Project will be required to comply with structural design components of the CBC, which ensures buildings are engineered to withstand anticipated seismic forces. Compliance with applicable regulations would ensure that the Project would result in less than significant impacts regarding strong seismic ground shaking and no mitigation is required.

- iii) *Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?*

Less than Significant Impact. According to the DOC's Earthquake Zones of Required Investigation, the Project site is within a liquefaction zone (DOC 2024b). The proposed Project would comply with Public Resources Code (PRC) Chapter 7.8 Section 2697 regarding projects located within a seismic hazard zone through RCM GEO-1, which requires the preparation of a geotechnical report defining and delineating any seismic hazard and recommended project design features.

Regulatory Compliance Measure:

RCM GEO-1 Geotechnical Investigation. Pursuant to PRC Chapter 7.8 Section 2697, prior to the approval of a project located in a seismic hazard zone, the Project proponent shall prepare a geotechnical report defining and delineating any seismic hazard. The County of Orange must have a site-specific geotechnical investigation conducted by a licensed professional to identify and evaluate the potential for seismic-related ground failure, including liquefaction, and to recommend appropriate design and construction project features or measures to be implemented for the Project.

In addition, the Project will comply with CBC standards, which requires that structures be designed to withstand the effects of ground shaking and ground failure, including the mitigation of liquefaction hazards through ground improvement, deep foundations, or other engineered solutions. Therefore, compliance with PRC and CBC would result in less than significant impacts regarding seismic-related ground failure, and no project-specific mitigation is required.

- iv) *Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?*

No impact. According to the DOC's Earthquake Zones of Required Investigation, the Project site is not within, nor adjacent to a Landslide Zone (DOC 2024b). There are no substantial hazards with respect to slope stability given the Project site and surrounding areas are mostly flat. No landslide-related impact would occur, and no project-specific mitigation is required.

- b) *Would the project result in substantial soil erosion or the loss of topsoil?*

Less than Significant Impact. During grading of the Project site, soils may be prone to erosion due to wind or rain. Because the proposed Project would disturb more than one acre of undeveloped land, it is subject to the NPDES General Permit. Under the NPDES program, the Project applicant must prepare and implement a Storm Water Pollution Prevention Plan (SWPPP) that identifies potential sources of sediment and pollutants, specifies best management practices (BMPs) for erosion and sediment control, and outlines inspection and maintenance procedures to ensure effectiveness throughout construction. A comprehensive discussion of erosion and water quality from rain events can be found in Section 5.10, *Hydrology and Water Quality*. Therefore, compliance with existing regulations would result in less than significant impacts related to soil erosion or loss of topsoil. No mitigation is required

- c) *Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?*

Less than Significant Impact. As noted above in Section 5.7.1 Threshold a)iii) and Threshold a)iv), the Project site is within a liquefaction hazard zone but not within a mapped Landslide Zone (DOC 2024b). With implementation of RCM GEO-1 a site-specific geotechnical investigation prepared by a licensed professional for the proposed Project will address the potential for liquefaction on-site and recommend required design features or measures for implementation.

In addition, the Project will comply with CBC standards pertaining to seismic design criteria and foundation/soil stability requirements intended to ensure that structures are designed to resist the effects of ground shaking, ground failure, and soil instability. With adherence to existing regulations and implementation of RCM GEO-1, impacts related to unstable geologic units would be less than significant and no mitigation is required.

- d) *Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?*

Less than Significant Impact. According to the United States Department of Agriculture (USDA), the Project site is situated on “Chino silty clay loam, drained” and “Mocho loam, 0 to 2 percent slopes, warm mean annual air temperature (MAAT), Major Land Resource Area (MLRA) 19” (USDA 2024). These soils have a Hydrologic Soil Group rating of C and B, respectively. According to Chapter 7 of the USDA’s Hydrology National Engineering Handbook, soils with a Hydrologic Soil Group rating of D have high shrink-swell (expansive) properties (USDA 2009). Because the Project site soils are rated B and C, they are not classified as highly expansive, although some minor shrink-swell behavior may occur under seasonal wetting and drying conditions.

The Project would be subject to RCM GEO-1, which requires preparation of a site-specific geotechnical investigation to evaluate soil conditions, including expansion potential, and to provide design recommendations. In a worst-case scenario, untreated expansive soils could undergo shrink-swell cycles that result in differential settlement or heave, potentially causing cracking of foundations, slabs, or pavements, and damage to utilities. However, standard grading, foundation design, and site preparation in compliance with the CBC, geotechnical report recommendations, and local regulations would ensure that expansive soil conditions are properly addressed. Expansive soil impacts would be less than significant, and no project-specific mitigations are required.

- e) *Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?*

No Impact. The proposed Project does not involve development or use of septic tanks or alternative waste water disposal systems. The Project will provide connections to the existing sewer collection system in the City of Santa Ana. No septic tank impact would occur and no mitigation is required.

- f) *Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

Less than Significant with Mitigation Incorporated. The following discussion summarizes the analysis on paleontological resources contained in the Cultural Report. Chambers Group requested a paleontological records search from the Natural History Museum of Los Angeles County (NHMLA) on May 30, 2025. This information was requested with the intent of providing further context related to

the paleontological sensitivity of the area based on known fossil locations identified within the Project site and the requested half-mile search radius. The paleontological records provide insight into what associated geological formations are most likely to contain fossils as well as the associated depths and placement of the known fossil locals relative to the geological formations in the area.

The records search results, received on June 8, 2025, identified no fossil localities directly within the Project site. However, the results identified fossil localities nearby from the same sedimentary deposits that may occur in the Project site, either at the surface or at depth (Appendix C, Cultural Report). As such, there is potential to encounter potentially significant paleontological resources within these fossil bearing sedimentary deposits underlying the Project site, depending on the specific depth and locations of these sedimentary deposits and the related Project construction plans.

In the event that paleontological resources are inadvertently discovered during Project construction activities, Mitigation Measure (MM) PAL-1 requires that a County-approved Qualified Project Paleontologist be retained during ground-disturbing activities and that a paleontological mitigation plan be developed and implemented to guide monitoring, recovery, and curation of any resources encountered. MM PAL-1 also requires that the Project Paleontologist prepare a final report summarizing monitoring efforts and any paleontological resources discovered, with additional documentation submitted as needed. With implementation of MM PAL-1, paleontological impacts would be less than significant.

MM PAL-1 Prior to the issuance of a grading permit, the County shall be required to obtain the services of a Qualified Project Paleontologist to remain on call for the duration of the proposed ground-disturbing construction activity. The paleontologist selected must be approved by the County. Upon approval or request by the County, a Paleontological Mitigation Plan (PMP) outlining procedures for paleontological data recovery shall be prepared for the Project and submitted to the County for review and approval. The development and implementation of the PMP shall include consultations with the County's Engineering Geologist as well as a requirement that the curation of all specimens recovered under any scenario shall be through an appropriate repository agreed upon by the County. If the County accepts ownership, the curation location may be revised. The PMP shall include developing a multilevel ranking system, or Potential Fossil Yield Classification (PFYC), as a tool to demonstrate the potential yield of fossils within a given stratigraphic unit. The PMP shall outline the monitoring and salvage protocols to address paleontological resources encountered during Project-related ground-disturbing activities, as well as the appropriate recording, collection, and processing protocols to appropriately address any resources discovered. At the completion of all ground-disturbing activities, the Project Paleontologist shall prepare a final paleontological mitigation report summarizing any monitoring efforts and observations, as performed in line with the PMP, and all paleontological resources encountered, if any. As well as providing follow-up reports and records for specific discoveries, as necessary.

5.8 GREENHOUSE GAS EMISSIONS

8.	GREENHOUSE GAS EMISSIONS. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
(b)	Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

5.8.1 Impact Analysis

- a) *Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*

Less than Significant Impact. The following discussion summarizes the analysis contained in the Air Report (Appendix A).

The proposed Project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. The proposed Project is anticipated to generate GHG emissions from mobile sources, area sources, energy usage, waste disposal, water usage, and construction equipment. The Project's GHG emissions have been calculated with the CalEEMod (version 2022.1) model based on the construction and operational parameters detailed in Section 8.1 of the Air Report. A summary of the results is shown in the table below and the CalEEMod model run is provided in Appendix A of the Air Report.

Table 8. Project Related Greenhouse Gas Annual Emissions

Category	Greenhouse Gas Emissions (Metric Tons per Year)			
	CO ₂	CH ₄	N ₂ O	CO ₂ e
Mobile Sources ¹	192	0.01	0.01	195
Area Sources ²	1.5	<0.01	<0.01	1.5
Energy Usage ³	260	0.02	<0.01	261
Water and Wastewater ⁴	12.0	0.27	0.01	20.0
Solid Waste ⁵	17.0	1.70	0.00	60.0
Refrigeration ⁶	--	--	--	0.02
Construction ⁷	17.0	<0.01	<0.01	17.1
Total GHG Emissions	499	2.00	0.03	555
SCAQMD Screening Threshold				3,000
Exceed Thresholds?				No

Notes:

¹ Mobile sources consist of GHG emissions from vehicles.

² Area sources consist of GHG emissions from consumer products, architectural coatings, and landscaping equipment.

³ Energy usage consists of GHG emissions from electricity and natural gas usage.

⁴ Water includes GHG emissions from electricity used for transport of water and processing of wastewater.

⁵ Waste includes the CO₂ and CH₄ emissions created from the solid waste placed in landfills.

⁶ Refrigeration includes GHG emissions from refrigerants in air conditioning units.

⁷ Construction emissions amortized over 30 years as recommended in the SCAQMD GHG Working Group on November 19, 2009.

Source: CalEEMod Version 2022.1 (see Appendix A)

The data provided in the table above shows that the proposed Project would create 555 metric tons carbon dioxide equivalent (MTCO₂e) per year, which would be well below the SCAQMD's screening threshold of 3,000 MTCO₂e per year. Furthermore, the Project would relocate and consolidate existing County fleet services operations and would not introduce a new public-serving land use. Hence, no net increase in operational energy usage is expected to occur. Therefore, a less than significant generation of GHG emissions would occur from development of the proposed Project and no mitigation is required.

- b) Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?*

Less than Significant Impact. The following discussion summarizes the analysis contained in the Air Report (Appendix A).

The proposed Project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing GHG emissions. As detailed above, the applicable plan for the proposed Project is CARB's 2022 Scoping Plan.

The 2022 Scoping Plan identifies additional GHG reduction actions and strategies necessary to achieve the AB 1279 target of 85 percent below 1990 levels by 2045. These actions and strategies build upon

those identified in the first update to the Scoping Plan (2013) and in the second update to the Scoping Plan (2017). Although a number of these measures are currently established as statewide regulations, some measures have not yet been formally proposed or adopted. It is expected that these measures or similar actions to reduce GHG emissions will be adopted as required to achieve statewide GHG emissions targets. Provided in the table below, Consistency with the 2022 Scoping Plan, is an evaluation of applicable reduction actions/strategies by emissions source category to determine how the proposed Project would be consistent with or exceed reduction actions/strategies outlined in the 2022 Scoping Plan.

Table 9. Consistency with the 2022 Scoping Plan

AB 32 GHG Inventory Sector (shown in Bold) and Scoping Plan Action	Proposed Project Consistency with Scoping Plan Actions
GHG Emissions Reductions Relative to the SB 32 Target 40% below 1990 levels by 2030.	No Conflict. The primary GHG emissions generated by the proposed Project would be from generation of electricity. SB 1020 requires that by end of 2035, 90 percent of electricity and by end of 2045 that 100 percent of electricity is generated from renewable and zero-carbon resources. In addition, the proposed Project will include a 10,000 SF solar PV canopy system that will assist in meeting this requirement. As such, the proposed Project would not conflict with this strategy.
Smart Growth / VMT VMT per capita reduced to 25% below 2019 levels by 2030, and 22% below 2019 levels by 2045.	No Conflict. As detailed in the VMT Screening Memo (Appendix G), the proposed Project meets both the City and County VMT screening criteria. As such, the proposed Project would not conflict with this strategy.
Light-Duty Vehicle (LDV) Zero-Emission Vehicles (ZEVs) 100% of LDV sales are ZEV by 2035.	Not Applicable. Executive Order N-79-20 requires all new LDVs sold in California to be zero-emission by the year 2035. The proposed Project would not include any vehicle sales activities.
Truck ZEVs 100% of medium-duty (MDV)/HDC sales are ZEV by 2040 (AB 74 University of California Institute of Transportation Studies [ITS] report).	No Conflict. Executive Order (EO) N-79-20 requires all new LDVs sold in California to be zero-emission by the year 2045. Any truck deliveries to the project site during either construction or operations would be operated and maintained by outside companies that would be required to meet the state truck regulations. As such, the proposed Project would not conflict with this strategy.
Aviation 10% of aviation fuel demand is met by electricity (batteries) or hydrogen (fuel cells) in 2045.	Not Applicable. The proposed Project would not utilize any aviation fuel.

AB 32 GHG Inventory Sector (shown in Bold) and Scoping Plan Action	Proposed Project Consistency with Scoping Plan Actions
Sustainable aviation fuel meets most or the rest of the aviation fuel demand that has not already transitioned to hydrogen or batteries.	
Ocean-going Vessels (OGV)	
2020 OGV At-Berth regulation fully implemented, with most OGVs utilizing shore power by 2027. 25% of OGVs utilize hydrogen fuel cell electric technology by 2045.	Not Applicable. The proposed Project would not utilize any OGVs.
Port Operations	
100% of cargo handling equipment is zero-emission by 2037. 100% of drayage trucks are zero emission by 2035.	Not Applicable. The proposed Project would not impact any operations at any ports.
Freight and Passenger Rail	
100% of passenger and other locomotive sales are ZEV by 2030. 100% of line haul locomotive sales are ZEV by 2035. Line haul and passenger rail rely primarily on hydrogen fuel cell technology, and others primarily utilize electricity.	Not Applicable. The proposed Project would not impact any freight or passenger rail operations.
Oil and Gas Extraction	
Phase out oil and gas extraction operations by 2045.	Not Applicable. The proposed Project would not impact any oil and gas extraction activities.
Petroleum Refining	
CCS on majority of petroleum refining operations by 2030. Production reduced in line with petroleum demand.	Not Applicable. The proposed Project would not impact any petroleum refining activities.
Electricity Generation	
Electric sector GHG target of 38 MMTCO ₂ e in 2030 and 31 MMTCO ₂ e in 2045. Retail sales load coverage	No Conflict. SB 1020 requires that 100 percent of retail sales of electricity be generated by renewable or zero-carbon source of electricity by December 1, 2045. In addition, the proposed Project will include a 10,000 SF solar PV canopy system that will assist in meeting this requirement. As such, the proposed Project would not conflict with this strategy.
New Residential and Commercial Buildings	
All electric appliances beginning 2026 (residential) and 2029 (commercial).	Not Applicable. The proposed non-residential project would be constructed prior to 2029.
Existing Residential Buildings	
80% of appliance sales are electric by 2030 and 100% of appliance sales are electric by 2035. Appliances are replaced at end of life.	Not Applicable. The proposed Project would not include any existing residential buildings.
Existing Commercial Buildings	
80% of appliance sales are electric by 2030, and 100% of appliance sales are electric by 2045. Appliances are replaced at end of life.	Not Applicable. The proposed Project would not include any existing commercial buildings.
Food Products	

AB 32 GHG Inventory Sector (shown in Bold) and Scoping Plan Action	Proposed Project Consistency with Scoping Plan Actions
7.5% of energy demand is electrified directly and/or indirectly by 2030; 75% by 2045.	Not Applicable. The proposed Project would not include any commercial food production activities.
Construction Equipment 25% of energy demand is electrified by 2030 and 75% electrified by 2045.	No Conflict. EO N-79-20 requires all off-road vehicles and equipment to transition to 100 percent zero-emission equipment, where feasible, by 2035. All construction equipment fleets utilized during construction of the proposed Project are required to be registered with CARB and meet CARB's current emission reductions regulations, which are anticipated to be updated to meet EO N-79-20 requirements. As such, the proposed Project would not conflict with this strategy.
Chemicals and Allied Products; Pulp and Paper Electrify 0% of boilers by 2030 and 100% of boilers by 2045. Hydrogen for 25% of process heat by 2035 and 100% by 2045. Electrify 100% of other energy demand by 2045.	Not Applicable. The proposed Project would not include any pulp and paper production activities.
Stone, Clay, Glass, and Cement CCS on 40% of operations by 2035 and on all facilities by 2045. Process emissions reduced through alternative materials and CCS.	Not Applicable. The proposed Project would not include any stone, clay, glass and cement production activities.
Other Industrial Manufacturing 0% energy demand electrified by 2030 and 50% by 2045.	Not Applicable. The proposed Project would be constructed prior to 2030.
Combined Heat and Power Facilities retire by 2040.	Not Applicable. The proposed Project would not include any existing combined heat and power facilities.
Agriculture Energy Use 25% energy demand is electrified by 2030 and 75% by 2045.	Not Applicable. The proposed Project would not include any commercial agriculture activities.
Low Carbon Fuels for Transportation Biomass supply is used to produce conventional and advanced biofuels, as well as hydrogen.	Not Applicable. The proposed Project would not include any production of fuels for transportation.
Low Carbon Fuels for Buildings and Industry In 2030s, renewable natural gas (RNG) blended in pipeline. Renewable hydrogen blended in natural gas pipeline at 7% energy (~20% by volume), ramping up between 2030 and 2040. In 2030s, dedicated hydrogen pipelines constructed to serve certain industrial clusters.	Not Applicable. The proposed Project would not include any production of fuels for buildings and industry.
Non-combustion Methane Emissions	

AB 32 GHG Inventory Sector (shown in Bold) and Scoping Plan Action	Proposed Project Consistency with Scoping Plan Actions
Increase landfill and dairy digester methane capture. Some alternative manure management deployed for smaller dairies. Moderate adoption of enteric strategies by 2030. Divert 75% of organic waste from landfills by 2025. Oil and gas fugitive methane emissions reduced 50% by 2030 and further reductions as infrastructure components retire in line with reduced fossil gas demand. High Global Warming Potential (GWP) Potential Emissions Low GWP refrigerants introduced as building electrification increases, mitigating Hydrofluorocarbons (HFC) emissions. Compensate for Remaining Emissions Carbon Dioxide Removal (CDR) demonstration projects deployed by 2030. CDR scaled to compensate for remaining GHG emissions in 2045	Not Applicable. The proposed Project would not include the operation of any landfill or dairy. Not Applicable. The proposed Project would not include the manufacturing of appliances that use low GWP refrigerants. Not Applicable. The proposed Project would not include any CDR demonstration projects

Source: CARB, 2022.

As shown above, the proposed Project would not conflict with any applicable proposed action or strategy in the 2022 CARB Scoping Plan. Therefore, the proposed Project would be consistent with the 2022 CARB Scoping Plan and potential GHG impacts would be less than significant. No mitigation is required.

5.9 HAZARDS AND HAZARDOUS MATERIALS

9.	HAZARDS AND HAZARDOUS MATERIALS. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
(b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
(c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
(d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
(e)	For a project located within an airport land use plan or, where such a plan had not been adopted, within 2 miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☒	☐
(f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
(g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	☒

5.9.1 Impact Analysis

a) *Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*

Less than Significant Impact. Construction activities for the proposed Project would involve the use of chemical substances such as solvents, paints, fuel for equipment, and other potentially hazardous materials. However, such activities would be relatively short-term. The transport, use and disposal of hazardous materials would be in small quantities and be temporary. While construction of the Project would require the temporary transport, use, and disposal of hazardous waste, construction activities associated with the Project would be required to comply with all applicable federal, state, and local regulations governing such activities. As the Project would not use a significant amount of hazardous materials during construction, it would not create a significant hazard to the public or the environment, and this impact would be less than significant.

During routine operations, the facility would handle common automotive maintenance materials, including motor oils, hydraulic fluids, cleaning solvents, and batteries. The proposed Fleet Facility would manage hazardous materials, including motor oil, fuels, solvents, coolants, lubricants, and

other automotive fluids, in accordance with applicable federal, state, and local environmental and occupational safety regulations. Hazardous materials are stored in designated, clearly labeled containers within secured areas equipped with appropriate secondary containment measures to minimize the potential for spills or releases. Facility personnel receive training on the proper handling, storage, and disposal of hazardous materials, and routine inspections are conducted to ensure compliance with established procedures and regulatory requirements. Used oils, fluids, filters, and other regulated wastes are managed in accordance with applicable hazardous waste regulations through licensed waste transporters and recycling or disposal facilities, as appropriate. Spill response equipment is maintained onsite, and established spill prevention and response procedures are implemented to promptly contain and mitigate accidental releases.

The facility would operate under the oversight of applicable regulatory agencies, including the California Division of Occupational Safety and Health (Cal/OSHA), the South Coast Air Quality Management District (South Coast AQMD), the Orange County Certified Unified Program Agency (CUPA), and other federal, state, and local agencies with jurisdiction. The County maintains required permits, plans, inspections, and reporting to ensure continued compliance with applicable environmental and safety. Compliance with existing regulations would result in less than significant impacts related to hazardous materials. No mitigation is required.

- b) *Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*

Less than Significant Impact. The primary incidents involving the routine handling and use of petroleum products, automotive fluids, and other hazardous materials at the Fleet Services Building could include minor drips, leaks, or spills during both construction and operational phases. Impacts from such incidents would be avoided by thoroughly cleaning up minor drips, leaks, or spills as soon as they occur, in compliance with all applicable regulations for proper handling of these materials. As discussed in Section 5.10, *Hydrology and Water Quality*, a site SWPPP would be developed and implemented as a compliance mechanism with the NPDES General Construction Permit to ensure quick response to minor drips, leaks, or spills.

The County would develop and implement a HMBP as required by the California Health and Safety Code and the Orange County Health Care Agency (OCHCA). The HMBP would be completed and approved prior to handling or storing reportable quantities of hazardous materials or waste, or installation of tanks and other oil-filled equipment. The HMBP would include an Emergency Response Plan to address potential spills or releases.

If the facility includes aboveground petroleum or fuel tanks exceeding 55 gallons, and with a total storage capacity of 1,320 gallons or more, a Spill Prevention, Control, and Countermeasure (SPCC) Plan would also be required under federal regulations (40 CFR 112) and California Aboveground Storage Tank regulations. In addition, the facility would be required to immediately notify the California Office of Emergency Services and OCHCA in the event of a spill of 42 gallons or more of petroleum. Therefore, impacts that would create a significant hazard to the public or environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment would be less than significant and no mitigation is required.

- c) *Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

Less than Significant Impact. The nearest sensitive receptor to the Project site is the John F. Kennedy Elementary School that is adjacent to the north side of the Project site. Specifically, the eastern school property line is immediately adjacent to the proposed access road off McFadden Avenue. The southern school property line is immediately adjacent to the Project site boundary and approximately 100 feet north of the proposed Fleet Service Standalone Building (see Figure 1). The southern portion of the school contains a field that is used by students periodically throughout the day. The Project site is also 0.15 miles east from Century High School and 0.15 miles west from Madison Elementary School. During construction of the proposed Fleet Facilities Building, hazardous materials such as fuels (e.g., diesel and gasoline), oils, lubricants, paints, adhesives, and cleaning solvents would be used and temporarily stored on-site. Construction equipment would also generate emissions, including diesel exhaust, which contains hazardous air pollutants. In addition, there is a potential for accidental spills or leaks of these materials during handling, fueling, or maintenance activities. However, construction-related hazardous materials would be used in relatively small quantities and managed in accordance with applicable federal, state, and local regulations, including proper storage, labeling, and spill prevention measures. Standard BMPs, such as secondary containment, prompt spill cleanup, and worker training, would further reduce the risk of accidental release.

During operations, the Fleet Facilities Building would handle hazardous materials such as motor oil, lubricants, cleaning solvents, batteries, and small quantities of fuels. However, these materials are generally stored in limited quantities and managed under strict regulatory frameworks, including the HMBP and OCHCA requirements. Refer to Impact Analysis 5.9.1 a) for additional analysis.

Compliance with regulations will ensure the proper containment, storage, and disposal procedures, and adherence to spill prevention and emergency response plans, the handling and use of these materials would not result in significant hazardous emissions or releases that could affect nearby schools. Therefore, potential impacts from hazardous emissions or materials within one-quarter mile of existing or proposed schools would be less than significant and no mitigation is required.

- d) *Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

No Impact. According to the Department of Toxic Substances Control (DTSC) and State Water Resources Board (SWRCB), the Project is not located on a site which is included on a list of hazardous materials site (DTSC 2025; SWRCB 2025).

A Phase I Environmental Site Assessment (ESA) was prepared by Verdantas in support of the proposed Project. (Appendix D: Phase I ESA -, February 19, 2026)

Historically, from at least the late 1930s through the mid-1980s, the Project site was used as an orchard without structures, tanks, or other features observed onsite with the exception of an undeveloped road transecting the middle of the site. In 2022, the Project site was partially developed with the present-day asphalt-paved parking lot in the northeast portion of the Project site. Currently, the Project site is partially developed with an asphalt-paved parking lot in the northeast portion and asphalt-paved, gated drive aisles traversing the Project site from entrances on the north, via East McFadden Avenue, and on the east, via South Grand Avenue. The asphalt-paved parking lot is

currently used by the adjoining Orange County offices to the east and north of the Project site. The remaining portions of the Project site are undeveloped landscaped or lawn areas.

From at least the late 1930s through the early 1950s, the adjoining properties consisted primarily of orchards. Between the mid-1960s and 2020, the adjoining properties were redeveloped with their present-day commercial/industrial structures. The Southern Pacific railroad is located adjacent to the west of the Project site, operating from at least the late 1800s until present. Currently, the Project vicinity consists primarily of mixed commercial and residential properties. JFK Elementary School is located directly to the northwest on the Site. Orange County offices, providing various services, are located north, east, and south of the Site. One 12,000-gallon diesel Underground Storage Tank (UST) is located approximately 100 feet east of the southern portion of the Site. The UST is used by the adjacent Orange County Data Center and no records indicative of a release from this UST were identified as part of the Phase I ESA. No off-site properties with environmental concerns that could present a risk to the Project were identified.

The findings of the Phase I ESA concluded that there is no evidence of Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), Historical Recognized Environmental Conditions (HRECs), or business environmental risks in connection with the Project site. Therefore, no impact related to a hazardous materials site would occur during construction or operations of the proposed Project and no mitigation is required.

- e) *For a project located within an airport land use plan or, where such a plan had not been adopted, within 2 miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?*

Less than Significant Impact. The Project site is not within 2 miles of an airport. The nearest airport is John Wayne Airport, located 3.5 miles south of the Project site. According to the Land Use Plan for John Wayne Airport, the Project site is within the boundary of the notification area required by Federal Aviation Regulation (FAR) Part 77 for any construction or alteration of objects within 20,000 feet of an airport runway that exceeds 150 feet above ground level (Commission 2008). The proposed Project would consist of low-lying structures that would be well below the 150-foot height threshold for FAR notification requirements.

In addition, the Project site is outside of the John Wayne Airport Impact Zones, which means it is located beyond the areas identified by the airport as being subject to higher risks from aircraft operations (Commission 2008). Therefore, impacts related to airport safety hazards or excessive noise during construction and operations would be less than significant. No mitigation is required.

- f) *Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

Less than Significant Impact. The Unified County of Orange and Orange County Operational Area Emergency Operation Plan describe the emergency organization and the process of preparing, responding to, and recovering from disasters (County 2019).

The Project would avoid obstructing public roads, access points, or designated emergency routes. Construction activities would follow standard traffic control and staging practices to maintain safe access for emergency vehicles and personnel. No road closures would be necessary under the proposed Project. Equipment staging would occur entirely within the Project site boundaries, as shown in Figure 2.

During operations, the facility would not block or impede any established emergency evacuation routes, fire lanes, or other access points critical to the implementation of local emergency response plans. Routine maintenance and material handling would be conducted on-site without creating hazards or obstructions that could interfere with emergency response. The two access roads off McFadden Ave and Grand Ave would comply with the OCFA and California Fire Code requirements, including adequate fire vehicle access, and would be utilized for emergency evacuation from the site.

As a result, the Project would not impair or physically interfere with adopted emergency response or evacuation plans, and potential impacts would be less than significant. No mitigation is required.

- g) Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?*

No Impact. The Project site is located in an urbanized area and there are no large, undeveloped areas and/or steep slopes on or near the site that may pose wildfire hazards. The Project site is not within, nor adjacent to, a Fire Hazard Severity Zone (FHSZ) of state or local responsibility (CALFire 2025). The Project would be required to adhere to the CBC and California Fire Code.

Furthermore, the existing Project site is dominated by flammable ruderal, non-native vegetation. Development of the Project would remove this vegetation and replace it with impervious surfaces, thereby reducing the site's overall fuel load and wildfire risk. Therefore, the Project would not expose people or structures to a significant risk of loss, injury, or death involving wildland fires during construction or operations. No wildland fire impacts would occur and no mitigation is required.

5.10 HYDROLOGY AND WATER QUALITY

10.	HYDROLOGY AND WATER QUALITY. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
(b)	Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
(c)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
	i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
	ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flood on- or off-site;	☐	☐	☒	☐
	iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
	iv) Impede or redirect flood flows?	☐	☐	☒	☐
(d)	In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
(e)	Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

5.10.1 Impact Analysis

- a) *Would the project violate any water quality standards or waste discharge requirements, or otherwise substantially degrade surface or ground water quality?*

Less than Significant Impact. A Hydrology and Hydraulics Report (Appendix E: Hydrology Report, December 2025), was prepared by Haley & Aldrich, Inc. in support of the proposed Project.

Construction

During construction, the proposed Project would disturb approximately 4.59 acres of soil. Construction activities associated with site grading, paving, and building development would have the potential to temporarily affect water quality through erosion, sediment transport, and accidental releases of fuels, oils, or other hazardous materials. Typical construction-related pollutants include sediment, nutrients, trash, oil and grease, and trace metals. Because construction of the proposed Project would disturb more than one acre, it would be required to obtain coverage under the State Water Resources Control Board Construction General Permit (Order 2022-0057-DWQ, as amended) pursuant to the Clean Water Act NPDES program (RCM HYD-1).

Compliance with the Construction General Permit would require preparation and implementation of a SWPPP that identifies and incorporates BMPs to control erosion, sedimentation, and the discharge of pollutants during construction (RCM HYD-1). BMPs would include, but are not limited to, soil stabilization measures, perimeter controls, good housekeeping practices, and spill prevention and response procedures. With implementation of these standard regulatory requirements, construction-related impacts on surface water quality would be temporary and less than significant.

Operation

The Project would relocate and consolidate existing County fleet services operations and would not introduce a new public-serving land use. Operation of the proposed Project would introduce potential sources of pollutants associated with vehicle maintenance, fueling, and storage activities, including oil and grease, metals, nutrients, pathogens, pesticides, and trash. In addition, the Project would increase impervious surface area, which would increase runoff volumes if not properly managed. The Hydrology Report indicates that unmitigated peak flows could increase substantially under post-development conditions; however, the Project would incorporate stormwater controls to ensure that post-development discharge does not exceed existing conditions (RCM HYD-3).

To address both flow and water quality, the project would implement a project-specific WQMP in accordance with the Orange County Drainage Area Management Plan (DAMP) and the County's NPDES Municipal Separate Storm Sewer System (MS4) permit requirements (RCM HYD-2). The WQMP includes a combination of structural and non-structural BMPs, including:

- Low Impact Development (LID) BMPs such as bioretention areas, modular wetlands, vegetated swales, and landscaped treatment areas to capture and treat stormwater runoff;
- Underground detention facilities to control peak flows and prevent increases in downstream discharge rates;
- Treatment control BMPs (e.g., proprietary filtration or modular wetland units) where LID measures alone cannot fully treat runoff;
- Structural source controls such as covered storage areas, protected fueling and maintenance areas, and drainage controls to prevent contact between stormwater and pollutants; and
- Non-structural controls including employee training, spill prevention and response plans, hazardous materials management, routine inspection and maintenance, and compliance with applicable industrial stormwater permit requirements.

These measures are designed to treat runoff to the maximum extent practicable, reduce pollutant loading, and ensure compliance with applicable waste discharge requirements and water quality standards. In addition, runoff from the site would be conveyed through BMPs prior to discharge to the municipal storm drain system, which ultimately drains to the Newport Bay watershed

Potential impacts to groundwater quality could occur through infiltration of contaminated stormwater or leaks/spills of hazardous materials. Site soils are classified as Hydrologic Soil Groups B and C, indicating moderate to slow infiltration rates, and infiltration BMPs would be used selectively where feasible and appropriate (Appendix E). The WQMP requires that stormwater be treated prior to any infiltration through the use of LID BMPs such as bioretention systems, which provide filtration

and pollutant removal. In addition, hazardous materials handling, fueling, and maintenance activities would be conducted in controlled areas with appropriate containment, drainage controls, and compliance with federal, state, and local hazardous materials regulations. Structural BMPs (e.g., covered fueling areas, secondary containment, and routing of wash water to sanitary sewer or treatment systems) and non-structural BMPs (e.g., spill response plans and inspections) would further reduce the potential for contaminants to reach underlying soils or groundwater.

Compliance with existing regulations would result in less than significant water quality impacts and no mitigation is required.

Regulatory Compliance Measures:

RCM HYD-1 **Construction General Permit.** Prior to issuance of a grading permit, the Project Applicant shall obtain coverage under the SWRCB National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities, Order No. 2022-0057-DWQ, NPDES No. CAS000002 (Construction General Permit). This shall include submission of Permit Registration Documents (PRDs), including a Notice of Intent for coverage under the permit to the SWRCB via the Stormwater Multiple Application and Report Tracking System (SMARTs). The Project Applicant shall provide the Waste Discharge Identification Number (WDID) to the Director of the County of Orange (County) Public Works Department, or designee, to demonstrate proof of coverage under the Construction General Permit. Project construction shall not be initiated until a WDID is received from the SWRCB and is provided to the Director of the County Public Works Department, or designee. A SWPPP shall be prepared and implemented for the proposed project in compliance with the requirements of the Construction General Permit. The SWPPP should identify construction BMPs to be implemented to ensure that the potential for soil erosion and sedimentation is minimized and to control the discharge of pollutants in stormwater runoff as a result of construction activities. Upon completion of construction and stabilization of the site, a Notice of Termination shall be submitted via the SMARTs.

RCM HYD-2 **MS4 Permit.** Prior to the issuance of grading or building permits, the Project Applicant shall submit a Final WQMP to the Orange County Public Works Department, or designee, for review and approval in compliance with the requirements of the NPDES *Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds Within the Orange County Region*, Order No. R8-2009-0030, NPDES No. CAS618030 as amended by Order No. R8-2010-0062 (MS4 Permit). The Final WQMP shall be prepared consistent with the requirements of the County of Orange Technical Guidance Document for Water Quality Management Plans (TGD) and the North Orange County Water Quality Management Plan template, or subsequent guidance manuals. The Final WQMP shall specify the BMPs to be incorporated into the project design to target pollutants of concern in runoff from the project site. The Orange County Public Works Department, or designee, shall ensure that the BMPs specified in the Final WQMP are

incorporated into the final project design, and shall implement, maintain and operate all such BMPs in a timely and reasonably diligent manner.

RCM HYD-3

Final Hydrology Report. Prior to issuance of a grading permit, the Project Applicant shall prepare a Final Hydrology Report to demonstrate that the post-construction runoff from the project site does not exceed existing conditions. The Project Applicant shall provide the Final Hydrology Report to the Director of the Orange County Public Works Department, or their designee, for review and approval.

- b) *Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?*

Less Than Significant Impact. The Project would add approximately 200,000 SF of impervious surface to the site. The Project does not propose groundwater extraction, dewatering, or recharge activities, and post-development runoff would be managed through storm drains and detention facilities.

The City's 2020 Urban Water Management Plan (UWMP) outlines current water demands, sources, and supply reliability to the City by forecasting water use based on climate, demographics, and land use changes within the City (MWDOC 2021). The City of Santa Ana is a retail water supplier that provides water to its residents and other customers using the imported potable water supply obtained from its regional wholesaler, Metropolitan Water District of Southern California (MET), local groundwater from the Orange County Groundwater Basin (OC Basin), and recycled water from the Orange County Water District (OCWD). The Municipal Water District of Orange County (MWDOC) UWMP, concluded that they can meet full-service demands of their member agencies through 2045 during normal years, single-dry years and multiple-dry years (MWDOC 2021).

Construction-related water use for the proposed Project would be typical of similar development projects and would be temporary in nature, occurring only during the construction period. Water demand would primarily support concrete mixing and curing, dust control to comply with air quality requirements, soil conditioning for grading and compaction, and limited equipment cleaning and worker sanitation. These activities represent standard construction practices and do not involve unusual or excessive water consumption relative to comparable projects. Construction water would be obtained from existing municipal supplies or temporary connections, and its use would cease upon completion of construction. As such, the short-term and intermittent nature of construction water demand would not result in a substantial or long-term impact on regional water supplies.

Operation of the proposed Project would require water for the daily needs of County faculty, washing vehicles and equipment cleaning, as needed, and landscaping irrigation. Based on the CalEEMod output contained in Appendix A, Project operations are estimated to require 8,273,265 gallons per year for indoor water use and 259,130 gallons per year for outdoor water use. The Project would utilize drought-tolerant landscaping to reduce irrigation water usage. Additionally, the Project would be required to comply with water efficiency standards in the California Building Energy Efficiency Standards and the California Green Building Standards Code. Although the Project would result in an incremental increase in water demand, it is anticipated that MWDOC would be able to sufficiently accommodate this. Therefore, the Project would not substantially affect groundwater supplies or interfere with sustainable groundwater management of the basin, and impacts are less than significant. No mitigation is required.

- c) *Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:*
 - i) *Result in substantial erosion or siltation on- or off-site;*
 - ii) *Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?*
 - iii) *Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources or polluted runoff?*
 - iv) *Impede or redirect flood flows?*

i)-iv) Less than Significant Impact.

The Project site consists of two parcels totaling approximately 11.3 acres. The area is largely developed with paved surfaces, storage areas, and minor landscaping. Topography is generally level with slight grading typical of urban parcels, sloping from north to south. Stormwater runoff sheet flows toward the centerline concrete gutter within the Paved Apron and Alley Layout (PAAL) and is collected into municipal storm drains. No natural drainage channels are present.

The Project is located within the Newport Bay watershed, which drains to Upper Newport Bay and ultimately the Pacific Ocean. Regional topography slopes gently toward the southwest.

Construction

Construction of the proposed Project would temporarily disturb on-site soils and modify localized drainage conditions, which could increase the potential for erosion and sedimentation during rainfall events. However, the Project site is currently developed with predominantly paved surfaces and ruderal vegetation and does not contain natural drainage channels or streams that would be altered.

During construction, erosion and siltation could occur due to grading and soil disturbance. As required under the SWRCB Construction General Permit, a SWPPP would be prepared and implemented to control erosion, sediment transport, and pollutant discharges (RCM HYD-1). The SWPPP would include BMPs such as soil stabilization, sediment barriers, perimeter controls, and good housekeeping practices. With implementation of these measures, potential construction-related erosion and siltation impacts would be minimized and would be less than significant.

Construction activities would not substantially increase long-term runoff rates or alter regional drainage patterns because these effects are temporary and would cease upon completion of grading and site stabilization. In addition, construction would not impede or redirect flood flows because the site is not located within a natural drainage channel or floodway and is not within a Federal Emergency Management Agency (FEMA) designated special flood hazard area (Appendix E).

Operation

The proposed development will convert the parcels into a centralized fleet operations facility with two primary buildings, expanded access roads, and associated infrastructure. Impervious coverage will increase significantly, resulting in higher runoff potential.

The preliminary results of the Hydrology Report indicate that unmitigated post-development peak flows could exceed existing conditions, necessitating detention and BMPs to maintain compliance with MS4 stormwater requirements (RCM HYD-2). Prior to the issuance of any grading or building permits, the applicant shall submit to the County, for review and approval, a WQMP, in compliance with the Orange County MS4 Permit (RCM HYD-2). The Project is also subject to the water quality conditions set forth per City of Santa Ana Municipal Code (Part 1, Chapter 18, Article IV, Section 18-156), which requires that all new development and significant redevelopment projects comply with the requirements of the Orange County DAMP (RCM HYD-2). Construction activities would also comply with applicable NPDES Construction General Permit requirements, including implementation of erosion and sediment control BMPs (RCM HYD-1).

The proposed drainage system will be designed to convey the mitigated 100-year design flow without surcharge and maintain hydraulic grade lines below finished surface elevations (RCM HYD-3). Pipe sizing will account for material type, roughness coefficient, and minimum slope requirements to comply with Orange County standards.

As discussed in the Hydrology Report, the proposed Project design addresses this by incorporating the following:

- An internal storm drain network;
- Underground detention facilities; and
- Water quality best management practices (BMPs; e.g., modular wetlands or bioretention)

Under post-development conditions, an internal storm drain network will collect roof and pavement runoff and route it through proposed water quality BMPs and underground detention before discharge to the existing public storm drain system along Grand Avenue. Post-development peak discharges at the connection to the public storm drain will be mitigated so they do not exceed existing conditions. These measures are intended to support compliance with the Orange County Hydrology Manual (Appendix E).

The Project site is not within a FEMA-mapped special flood hazard area (Appendix E). No flood control channels or floodplains would be altered, and flood flows would not be impeded or redirected.

Based on the existing site conditions, results of the Hydrology Report, and incorporation of project design features (internal storm drain network, underground detention facilities, and water quality BMPs), and regulatory requirements (RCM HYD-1 through HYD-3), the Project would not substantially alter existing drainage patterns or result in erosion, flooding, exceedance of stormwater system capacity, or impediment of flood flows. The proposed internal drainage system, underground detention, and water quality BMPs would mitigate post-development runoff to levels that do not exceed existing conditions and ensure compliance with the Orange County

MS4 Permit, DAMP, and applicable County and City standards. Accordingly, impacts related to drainage patterns and surface runoff would be less than significant and no mitigation is required.

- d) *Would the project in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?*

Less than Significant Impact. The Project site is not located within a FEMA-mapped special flood hazard area (Appendix E). The site is situated more than nine miles inland from the Pacific Ocean, and there are no large bodies of water, reservoirs, or dams in the vicinity that could result in a seiche. The nearest body of water is a 2.52-acre pond located 2.30 miles south of the Project site (USFWS 2026). Given these conditions, the risk of flooding, tsunami, or seiche-induced inundation is minimal. Therefore, impacts related to flood hazards, tsunamis, seiches, and associated pollutant release would be less than significant and no mitigation is required.

- e) *Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?*

Less than Significant Impact. The Project site is located within the Coastal Plain of Orange County Groundwater Basin, which is designated as a medium priority basin under the Sustainable Groundwater Management Act (DWR 2025). In 2019, the DWR approved OCWD's Alternative Plan, which demonstrated how the Coastal Plain of Orange County Groundwater Basin operated within its sustainable yield over a period of at least 10 years and is managed responsibly (DWR 2019). The Project does not propose groundwater extraction, recharge, or other activities that would affect basin sustainability.

Construction

During construction activities, excavated soil would be exposed, increasing the potential for soil erosion and sedimentation compared to existing conditions. Additionally, chemicals, liquid products, petroleum products (e.g., paints, solvents, and fuels), and concrete-related waste could be spilled or leaked and transported via stormwater runoff into receiving waters.

To address these risks, the Project would be required to comply with the NPDES Construction General Permit, as specified in RCM HYD-1, which requires preparation of a SWPPP and implementation of construction BMPs to control stormwater runoff and pollutant discharges.

Stormwater infiltration during construction is not expected to adversely affect groundwater quality because pollutants in stormwater are generally reduced through natural soil filtration processes as water infiltrates.

With compliance with applicable NPDES requirements and implementation of construction BMPs (RCM HYD-1), construction-related impacts to water quality and groundwater would be less than significant.

Operation

The Project site is located within the Coastal Plain of Orange County Groundwater Basin and within the jurisdiction of the Santa Ana RWQCB, which enforces the Basin Plan establishing water quality objectives and beneficial uses.

During operation, primary pollutants of concern include suspended solids, nutrients, heavy metals, pathogens, pesticides, oil and grease, and trash/debris. To address these, a final WQMP would be prepared in compliance with the North Orange County MS4 Permit, as required by RCM HYD-2. The WQMP would incorporate:

- LID BMPs such as bioretention areas, modular wetlands, vegetated swales, and landscaped treatment areas to capture and treat stormwater runoff;
- Underground detention facilities to control peak flows and prevent increases in downstream discharge rates;
- Treatment control BMPs (e.g., proprietary filtration or modular wetland units) where LID measures alone cannot fully treat runoff;
- Structural source controls such as covered storage areas, protected fueling and maintenance areas, and drainage controls to prevent contact between stormwater and pollutants; and
- Non-structural controls including employee training, spill prevention and response plans, hazardous materials management, routine inspection and maintenance, and compliance with applicable industrial stormwater permit requirements.

These measures would treat stormwater runoff and reduce pollutant discharges.

The Project would not require groundwater extraction during operation, as existing water infrastructure would serve the site. Additionally, operational BMPs would treat stormwater prior to any potential groundwater recharge.

The Project would comply with all applicable water quality control plans, including the Santa Ana RWQCB Basin Plan, the Orange County MS4 Permit, and the Orange County DAMP (RCM HYD-1, HYD-2, and HYD-3). Post-construction runoff would be managed through an internal storm drain network, underground detention facilities, and water quality BMPs implemented via a County-approved WQMP.

Because the Project would not extract or inject groundwater, and runoff is treated and conveyed in compliance with local and regional water quality requirements, it would not conflict with or obstruct implementation of any applicable water quality control or sustainable groundwater management plans. Impacts are therefore considered less than significant and no mitigation is required.

5.11 LAND USE AND PLANNING

11.	LAND USE/PLANNING Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Physically divide an established community?	☐	☐	☐	☒
(b)	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

5.11.1 Impact Analysis

a) Would the project physically divide an established community?

No Impact. The Project's proposed use as a fleet services facility would be consistent with the commercial and industrial uses on the project site and the surrounding development. The western perimeter of the Project site is bounded by train tracks and a fence, with residential properties located immediately beyond the tracks. The Project would maintain existing circulation patterns and would not obstruct access to any surrounding neighborhoods, community facilities, or public services, ensuring that the local community remains connected. Therefore, the Project would not physically divide the existing established community, as it does not create any new barrier between the residential neighborhoods and surrounding areas. Impacts related to dividing an established community would not occur and no mitigation is required.

b) Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

No Impact. The Project site is zoned as M1 and has a General Plan land use designation as IND. Section 41-472 of the Santa Ana Zoning Ordinance permits automotive repair and service uses, thus the proposed Fleet Services Facility is consistent with local zoning requirements. Additionally, the Project is owned and operated by the County of Orange, and the Project will be constructed and permitted according to the County requirements and CBC. No entitlements are required from the City, and the proposed Project would not result in a conflict with an adopted plan, policy, or regulation intended to protect the environment. Furthermore, the Project would relocate and consolidate existing County fleet services operations and would not introduce a new public-serving land use. Accordingly, no impact related to land use conflicts would occur and no mitigation is required.

5.12 MINERAL RESOURCES

12.	MINERAL RESOURCES Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
(b)	Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

5.12.1 Impact Analysis

- a) *Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?*
- b) *Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?*

a) & b) No Impact. The California Geological Survey designates Mineral Resource Zones (MRZs) according to the presence of, or potential for underlying mineral resources. As stated in the County General Plan Resources Element, mineral resource areas in the County are primarily located in portions of the Santa Ana River, Santiago Creek, San Juan Creek, and Arroyo Trabuco, none of which include the Project site (General Plan, County 2025). There are no mining activities or mineral extraction uses near the Project site. Thus, the Project would not result in the loss of availability of locally important mineral resources.

There are no past or ongoing oil or gas drilling activities on or near the Project site. Review of the California Geologic Energy Management Division's (CalGEM) Well Finder shows no oil or gas wells are located on the Project site or within the vicinity (DOC 2025). Therefore, development of the site would not result in the loss of regional mineral resources. No impact related to the loss of mineral resources would occur and no mitigation is required.

5.13 NOISE

13.	NOISE Would the project result in:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
(b)	Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
(c)	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐

5.13.1 Impact Analysis

- a) *Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

Less than Significant Impact. A Noise Impact Analysis (Appendix F: Noise Analysis, November 12, 2025) was prepared by Vista Environmental in support of the proposed Project.

This section summarizes the Noise Impact Analysis's discussion of the Project's construction and long-term operational noise impacts.

Construction-Related Noise

The construction activities for the proposed Project are anticipated to include site preparation and grading of the Project site, building construction of the Fleet Services Building, Facilities Operations Building, and solar panel canopy, paving of the on-site roads, disposal lot, and parking areas, and application of architectural coatings. Noise impacts from construction activities associated with the proposed Project would be a function of the noise generated by construction equipment, equipment location, sensitivity of nearby land uses, and the timing and duration of the construction activities.

Section 18-314(e) of the City's Municipal Code exempts construction noise that occurs between 7:00 a.m. and 8:00 p.m. on weekdays from the City's noise standards. Section 4-6-7(e) of the County's Municipal Code exempts construction noise that occurs between 7:00 a.m. and 8:00 p.m. on weekdays from the County's noise standards. Since neither Municipal Code provides any limits to the noise levels that may be created from construction activities that occur during the allowable times for construction, the Federal Transit Authority (FTA) construction noise thresholds, contained in Table A of the Noise Impact Analysis, have been utilized that limit noise impacts to 80 dBA Leq during the daytime when construction noise is exempt.

Construction noise levels to the nearby sensitive receptors have been calculated through use of the Roadway Construction Noise Model (RCNM) and the parameters and assumptions are detailed in Section 6.1 of the Noise Impact Analysis. Construction noise levels to the nearby sensitive receptors, including JFK Elementary School and multifamily homes, are shown in the table below and the RCNM printouts are provided in Appendix C of the Noise Impact Analysis.

PDF-1 has been provided that would require the installation of a minimum 12-foot-high and approximately 1,200-foot-long concrete masonry unit (CMU) wall at the location of the New Wall as shown above in Figure 2 – Site Plan, that would cover the entire length of the south side of JFK Elementary School and east side of the adjacent homes. .

California Department of Transportation (Caltrans) research has found that sound walls provide 5 dB of noise shielding when the wall reaches the height of line of sight between source and receiver (approximately 10 feet high) and then an additional 0.9 dBA of noise shielding for each foot above the line of sight (Appendix F). As such, the proposed 12-foot-high permanent noise barrier (see PDF-1) would provide approximately 6.8 dBA of noise reduction, which was entered into the RCNM model. The RCNM printouts are provided in Appendix D of the Noise Impact Analysis.

As shown on Table 10: Construction Noise Levels at the Nearby Sensitive Receptors, with implementation of the permanent sound wall required by PDF-1, the construction-related noise levels at the nearest sensitive receptors (JFK Elementary School and multifamily homes) would be below the FTA construction noise standard of 80 dBA. Therefore, with implementation of PDF-1 and through adherence to allowable construction times provided in the City and County Municipal Codes, the proposed Project's construction-related noise would be reduced to less than significant.

Table 10. Construction Noise Levels at the Nearby Sensitive Receptors

Construction Phase	Construction Noise Level (dBA Leq) at:		
	South Side of JFK Elementary School ¹	Multi-Family Homes to West ²	East Side of JFK Elementary School ³
Site Preparation	75	78	79
Grading	75	78	79
Building Construction	73	77	--
Paving	72	75	76
Painting	70	72	--
FTA Construction Noise Threshold⁴	80	80	80
Exceed Thresholds?	No	No	No

Notes:

¹ The south side of JFK Elementary School was analyzed at 30 feet from property line to the center of the southern solar canopy.

² The multi-family homes to the west were analyzed at 55 feet from property line to homes.

³ The east side of JFK Elementary School that is adjacent to the access road was analyzed at 15 feet from property line to the center of the community garden area. No Building Construction or Painting would occur at the access road improvement area.

⁴ The FTA Construction noise thresholds are detailed above in **Error! Reference source not found.**

Source: RCNM, Federal Highway Administration, 2006

Operational Noise

The proposed Project consists of the operation of the new fleet services facility. Potential noise impacts associated with the operations of the proposed Project would be generated from the vehicular traffic on the nearby roadways and from on-site noise sources that may create noise levels in excess of City and County standards at the nearby receptors. The noise impacts to the nearby receptors from roadway noise and from the on-site noise sources have been analyzed separately below.

Roadway Vehicular Noise Impact to Nearby Sensitive Receptors

Vehicle noise is a combination of the noise produced by the engine, exhaust and tires. The level of traffic noise depends on three primary factors (1) the volume of traffic, (2) the speed of traffic, and (3) the number of trucks in the flow of traffic. The proposed Project does not propose any uses that would require a substantial number of truck trips and the proposed Project would not alter the speed limit on any existing roadway so the proposed Project's potential off-site noise impacts have been focused on the noise impacts associated with the change of volume of traffic that would occur with development of the proposed Project.

The *Santa Ana General Plan Update Draft Program Environmental Impact Report* (Santa Ana DPEIR), prepared by Placeworks, August 2020, utilizes the following thresholds of significance to assess traffic noise impacts at sensitive receptor locations:

- Greater than 1.5 dBA increase for ambient noise environments of 65 dBA CNEL and higher;
- Greater than 3 dBA increase for ambient noise environments of 60 – 64 dBA CNEL; and
- Greater than 5 dBA increase for ambient noise environments of less than 60 dBA CNEL.

The proposed Project consists of the consolidation of two existing facilities that are located within two miles of the project site into the proposed facility. As discussed in the Air Report, according to OCPW staff, the new fleet services facility will generate approximately 150 daily vehicle trips (in and out) or a total of 300 one-way daily trips that include both vehicles to be serviced and loaner vehicles.

In addition, approximately 50 employees would work at the proposed facility. Based on each employee driving from home to work and back (2 trips) and from work to lunch and back (2 trips), the 50 employees would generate up to 200 daily trips during each workday. Therefore, it is anticipated that operation of the Proposed Project would generate an average of 500 daily trips, Monday through Friday (Appendix A).. The Santa Ana DPEIR shows that McFadden Avenue currently has 20,997 average daily trips (ADT) and Grand Avenue currently has 36,678 ADT. Therefore, the Project would result in a maximum of 2.4 percent increase in ADT on McFadden Avenue and a 1.4 percent increase in ADT on Grand Avenue.

In order for project-generated vehicular traffic to increase the noise level by 1.5 dB, the roadway traffic would have to increase by 50 percent, and to increase the noise level by 3 dB, the roadway traffic would have to double (Appendix F).

Since the proposed Project would only result in a maximum of 2.4 percent increase on McFadden Avenue and a 1.4 percent increase on Grand Avenue, when compared to existing conditions, the Project-related roadway noise increase is anticipated to be negligible and well below the most stringent 1.5 dBA road noise threshold. Operational roadway noise impacts would be less than significant.

On-site Noise Impacts to Nearby Sensitive Receptors

Section 18-312 of the City’s Municipal Code and Section 4-6-5 of the County’s Municipal Code limits the noise levels at the nearby homes to 55 dBA Leq or 75 dBA Lmax between 7:00 a.m. and 10:00 p.m. and 50 dBA Leq or 70 dBA Lmax between 10:00 p.m. and 7:00 a.m. Section 18-315 of the City’s Municipal Code and Section 4-6-8 of the County’s Municipal Code specify that the noise standard for schools is the same as the residential noise standard.

The nearest sensitive receptor to the Project site is the JFK School that is adjacent to the north side of the Project site. There are also multi-family homes that are as near as 55 feet west of the Project site. Table 11: Operational Noise Levels at the Nearby Sensitive Receptors Prior to Mitigation below shows the calculated operational noise levels at the nearby sensitive receptors, and the noise calculation printouts are provided in Appendix D of the Noise Impact Analysis. The calculated noise levels account for the noise reduction provided by the minimum 12-foot-high CMU wall required by PDF-1 and the assumption that the Project will not be operational during the City’s nighttime noise ordinance hours (between 10:00 p.m. and 7:00 a.m.).

PDF-1 has been provided that would require the installation of a minimum 12-foot-high and approximately 1,200-foot-long concrete masonry unit (CMU) wall at the location of the New Wall as shown above in Figure 2 – Site Plan, that would cover the entire length of the south side of JFK Elementary School and east side of the adjacent homes.

Table 11. Operational Noise Levels at the Nearby Sensitive Receptors

Noise Source	Calculated Noise Levels at:			
	School to North		Multi-Family Homes to West	
	Average Noise (dBA Leq)	Max Noise (dBA Lmax)	Average Day (dBA Leq)	Max Noise (dBA Lmax)
Service Bays	36.1	56.5	36.8	57.2
Siren in Service Bay	37.9	64.5	38.9	65.5

Noise Source	Calculated Noise Levels at:			
	School to North		Multi-Family Homes to West	
	Average Noise (dBA Leq)	Max Noise (dBA Lmax)	Average Day (dBA Leq)	Max Noise (dBA Lmax)
Bus Bays	42.1	53.4	38.1	49.4
Compressor at Service Bays	37.6	56.8	37.9	57.1
Body Shop	43.1	53.6	48.2	58.7
Compressor at Body Shop	37.9	45.6	42.7	50.4
Metal Fabrication Shop	41.5	62.1	44.0	64.7
Rooftop Mechanical Equipment	36.1	56.6	38.6	59.1
Max or Combined Noise Level¹	48.9	64.5	51.5	65.5
City and County Noise Standards² (Day)³	55	75	55	75
Exceed City and County Noise Standards (Day)?	No	No	No	No

Notes:¹ The calculated noise levels include noise reduction provided by the proposed 12-foot high cmu wall (see Project Design Feature 1)

² The City noise standards were obtained from Section 18.312 of the Municipal Code, and the County noise standards were obtained from Section 4-6-5 of the Municipal Code.

³ The City and County nighttime noise standards are excluded because the Project will not be operational during nighttime hours (between 10:00 p.m. and 7:00 a.m.)

Table 11 above shows the calculated operational noise levels at the nearby sensitive receptors with the noise reduction provided by the minimum 12-foot-high CMU wall and closure of the facility during nighttime hours (between 10:00 p.m. and 7:00 a.m.). With implementation of the CMU sound wall required in PDF-1, the operation-related noise levels at JFK Elementary School and at the multi-family homes would be below the City and County noise standards. Therefore, the proposed Project's operations-related noise would be less than significant.

b) *Would the project result in generation of excessive groundborne vibration or groundborne noise levels?*

Less than Significant Impact. This section summarizes the Noise Impact Analysis discussion of the Project's construction and long-term operational noise impacts (Appendix F).

Construction-Related Vibration Impacts

The construction activities for the proposed Project are anticipated to include site preparation and grading of the Project site, building construction of the Fleet Services Building, Facilities Operations Building, and solar panel canopy, paving of the on-site roads, disposal lot, and parking areas, and application of architectural coatings. The nearest off-site structure where people may sit, which makes them much more susceptible to vibration, would be the school structure located as near as 30 feet from the proposed access road to McFadden Avenue improvements that would add approximately 50,000 SF of paved roadway adjacent to the east side of JFK Elementary School.

Since neither the City or County General Plans or Municipal Codes provide any vibration standards for construction activities, Caltrans guidance (detailed in Section 4.2 of the Noise Impact analysis) has been utilized, which defines the threshold of perception from transient sources at 0.25 inch per second peak particle velocity (PPV).

The primary source of vibration during construction would be from the operation of a vibratory roller. A vibratory roller would create a vibration level of 0.21 inch per second PPV at 25 feet. Based on

typical propagation rates, the vibration level at the nearest off-site structure (30 feet away) would be 0.17 inch per second PPV. The vibration level at the nearest off-site structures would be below the 0.25 inch per second PPV threshold detailed above. Impacts would be less than significant.

Operations-Related Vibration Impacts

The proposed Project would consist of the on-going operation of the new fleet services facility. The on-going operation of the proposed Project would not include the operation of any known vibration sources. Therefore, a less than significant vibration impact is anticipated from the operation of the proposed Project and no mitigation is required.

- c) *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

Less than Significant Impact. The Project site is not within 2 miles of an airport. The nearest airport is John Wayne Airport, located 3.5 miles south of the Project site. According to the Land Use Plan for John Wayne Airport, the Project site is within the boundary of the notification area required by FAR Part 77 for any construction or alteration of objects within 20,000 feet of an airport runway that exceeds certain height limits (Commission 2008). The proposed Project would comply with this requirement if it exceeds specified heights.

In addition, the Project site is outside of the John Wayne Airport Impact Zones, which means it is located beyond the areas identified by the airport as being subject to higher risks from aircraft operations (Commission 2008). Therefore, noise impacts towards people residing or working in the Project area would be less than significant and no mitigation is required.

5.14 POPULATION AND HOUSING

14.	POPULATION AND HOUSING. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☐	☒
(b)	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

5.14.1 Impact Analysis

- a) *Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*

No Impact. During construction and operation, the proposed Project would aim to employ workers from the existing local population to minimize or avoid any unplanned substantial population growth. In addition, County employees currently working at the existing OC Fleet Services facilities at 445 Civic

Center West and 1102 East Fruit Street would be relocated to the Project site. Because the existing and proposed relocation of the OC Fleet Services facilities are located within Santa Ana, the relocation of work sites would not introduce new workers to the City of Santa Ana or result in population growth in the Project area.

While some County personnel from outside Santa Ana may occasionally visit the proposed Fleet Services Facility to service County vehicles, these visits would be temporary and would not involve new housing or permanent relocation. Furthermore, the Project would relocate and consolidate existing County fleet services operations and would not introduce a new public-serving land use. Therefore, the proposed Project would not induce substantial unplanned population growth in the area. No impact related to unplanned population growth would occur and no mitigation is required.

- b) *Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?*

No Impact. As discussed above in Section 5.14.1 Threshold a), the proposed Project involves the relocation and consolidation of existing OC Fleet Services facilities to the new vacant site that is surrounded by institutional/commercial/industrial buildings. The Project site does not contain any residential units, and no homes or housing would be removed or displaced as part of the Project. Therefore, the Project would not displace substantial numbers of existing people or require the construction of replacement housing elsewhere. No impact related to displacement of people or housing would occur and no mitigation is required.

5.15 PUBLIC SERVICES

15.	PUBLIC SERVICES.	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
	i) Fire Protection?	☐	☐	☒	☐
	ii) Police Protection?	☐	☐	☒	☐
	iii) Schools?	☐	☐	☐	☒
	iv) Parks?	☐	☐	☐	☒
	v) Other public facilities?	☐	☐	☐	☒

5.15.1 Impact Analysis

- a) i) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection?*

Less than Significant Impact. The proposed Project would be served by OCFA Station #74, which is located 0.90 miles west and approximately 7-minute driving distance.

As previously discussed in Section 5.14.1 Threshold a), the Project construction and operations would aim to employ workers from the local population, thus would not result in an increase in the local residential population. Nevertheless, a minor increase in demand for fire services would potentially result from the increase in workforce in this area. Coordination with the local fire department would be required before any building occupancy to ensure worker safety measures are in place.

According to the City of Santa Ana General Plan, although fire incidents have increased from 2013 to 2018, OCFA continues to meet their performance standards for emergency calls in Santa Ana (City 2021). Furthermore, per the County General Plan, the OCFA shall review the Project site plans prior to their consideration, to ensure that adequate fire and paramedic facilities will be available or programmed for construction with determined funding sources (County 2025). Therefore, operational impacts related to the provision of new facilities as a result of increased demand for fire services would be less than significant and no mitigation is required.

- ii) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection?*

Less than Significant Impact. The proposed Project would be served by the Santa Ana Police Department (SAPS) Substation located at 1780 McFadden Ave, Santa Ana, CA 92705. The Substation is located 0.60 miles east of the Project site and approximately 5-minute driving distance.

As previously discussed, the Project construction and operations would aim to employ workers from the local population, thus would not result in an increase in the local residential population. Nevertheless, a minor increase in demand for police services would potentially result from the increase in workforce in this area. The incremental demand of the Project for police protection services is not anticipated to increase SAPS response times to the Project site or the surrounding areas. In addition, the Project would provide security measures such as controlled access gates along both proposed access roads and a security camera system. Therefore, the Project would not result in significant impacts regarding police services and no mitigation is required.

- iii) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools?*

No Impact. As previously discussed, the Project construction and operations would aim to employ workers from the local population in an effort to avoid or minimize an increase in the local residential population or student population. Furthermore, circulation and access at JFK Elementary School would remain unchanged with implementation of the proposed Project. No impact related to schools would occur and no mitigation is necessary.

- iv) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks?*

No Impact. As previously discussed, the Project construction and operations would aim to employ workers from the local population in an effort to avoid or minimize an increase in the local residential population. The Project does not include a housing component that would induce direct population growth that would then generate demand for parks. Therefore, the Project would not increase demand for parks or require the construction or expansion of park facilities. No impacts to parks would occur and no mitigation is required.

- v) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities?*

No Impact. As previously discussed, the Project construction and operations would aim to employ workers from the local population in an effort to avoid or minimize an increase in the local residential population. The Project does not include a housing component that would induce direct population growth that would then generate demand for other public services. Instead, the Project would improve efficiency and reliability of County fleet operations by consolidating vehicle servicing into a modern facility. This enhancement would support the continued delivery of essential public services (e.g., law enforcement, emergency response, and community programs) that depend on County-owned vehicles, thereby providing a net public benefit. No impact to other public facilities would occur and no mitigation is required.

5.16 RECREATION

16.	RECREATION. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒

16.	RECREATION. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(b)	Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

5.16.1 Impact Analysis

- a) *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?*

No Impact. The Project would relocate and consolidate existing County fleet services operations and would not introduce a new public-serving land use. Project construction and operations would aim to employ workers from the local population in an effort to avoid or minimize an increase in the local residential population. The Project does not include a housing component that would induce direct population growth that would then generate demand for parks or recreational facilities. Therefore, there are no construction or operational impacts related to the increase in use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. No recreational impact would occur and no mitigation is required.

- b) *Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?*

No Impact. The Project would relocate and consolidate existing County fleet services operations and would not introduce a new public-serving land use. Project construction and operations would aim to employ workers from the local population in an effort to avoid or minimize an increase in the local residential population. The Project does not include a housing component that would induce direct population growth that would then generate demand for recreational facilities. The Project does not include new recreational facilities or require the expansion of existing recreational facilities. Therefore, no recreational impacts would occur and no mitigation is required.

5.17 TRANSPORTATION

17.	TRANSPORTATION. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities?	☐	☐	☒	☐
(b)	Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
(c)	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
(d)	Result in inadequate emergency access?	☐	☐	☒	☐

5.17.1 Impact Analysis

- a) *Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities?*

Less than Significant Impact.

Applicable programs include the Orange County Transportation Implementation Manual, City of Santa Ana General Plan Circulation Element, the Orange County Master Plan of Arterial Highways, the OCTA Long Range Transportation Plan (LRTP), and the Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).

The Project would relocate and consolidate existing County fleet services operations and would not introduce a new public-serving land use. Although the Project may introduce vehicle trips to the Project area, it would not result in a net increase in trips given the Project would relocate and consolidate existing OC Fleet operations.

Access to the Project site would be provided via existing driveways from McFadden Avenue and South Grand Avenue, both of which are designated arterial roadways within the City's and County's circulation network. The Project would not require modifications to public roadway alignments, reduce roadway capacity, or interfere with planned roadway improvements identified in the City of Santa Ana General Plan Circulation Element or the Orange County Master Plan of Arterial Highways (City 2022a; County 2026a).

The Project would not conflict with adopted or planned transit facilities, as it does not remove or obstruct transit routes, stops, or rights-of-way identified in OCTA or SCAG planning documents. In addition, the Project would not eliminate or impede existing or planned bicycle or pedestrian facilities identified in the City of Santa Ana General Plan or related active transportation plans. Access to the site would be restricted to County staff, and no new public pedestrian or bicycle access would be required.

The Project is also consistent with the SCAG RTP/SCS, as it represents a consolidation of existing public facilities and supports efficient public services without inducing additional travel demand beyond regional assumptions.

Per the Orange County Transportation Implementation Manual, the proposed Project qualifies as a government-owned facility that is not used for revenue generation or commercial purposes and is therefore exempt from the County's Growth Management (GM) Element Traffic Level of Service (LOS) policies (County 2020a). Accordingly, the Project is not subject to GM Element traffic requirements, including applicable traffic analysis methodologies and minimum traffic report standards.

According to the Orange County Vehicle Miles Travelled (VMT) Screening Application, the proposed Project is within a High-Quality Transit Area (HQTa), meaning it is within walking distance of a major transit stop or high-frequency transit corridor. This location supports multimodal transportation options, including transit, walking, and bicycling, and is consistent with state and regional goals to reduce reliance on single-occupant vehicle travel (County 2026b).

The City of Santa Ana does not maintain vehicle LOS significance thresholds for evaluating transportation impacts and, consistent with SB 743, evaluates transportation impacts using VMT

rather than intersection or roadway LOS. As discussed below under Threshold b), the City of Santa Ana's VMT guidelines allow certain projects to be screened out of a detailed VMT analysis if they meet specific criteria, including being located within a Transit Priority Area (TPA), being located in a low-VMT Traffic Analysis Zone (TAZ), and being consistent with regional land use assumptions. The Proposed Project qualifies for screening because it consolidates existing fleet operations into a centralized facility that improves operational efficiency and reduces redundant vehicle trips. The Project is located within a TPA, is situated in a low-VMT generating TAZ (more than 15 percent below the Orange County average), is consistent with RTP/SCS land use assumptions, and is located outside areas where a full VMT analysis is required. Therefore, the Project meets the City's screening criteria and does not require a detailed VMT analysis. The Project would improve connectivity within the site through extensions of existing access roads, maintain compatibility with the surrounding circulation system, and avoid impacts to the City's planned transportation facilities. Thus, the Project would not conflict with the goals, policies, or implementation measures of the City of Santa Ana Mobility Element.

Therefore, the proposed Project would not conflict with any adopted program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, or pedestrian facilities; a less than significant impact would occur. No mitigation is required.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Less than Significant Impact. A VMT Screening Memorandum (VMT Memo) was prepared in support of the proposed Project (Appendix G: VMT Screening Memorandum, October 9, 2025). The following discussion summarizes the analysis contained in the VMT Memo.

County of Orange VMT Analysis

Thresholds

The County of Orange VMT assessment guidelines are specified in the Guidelines for Evaluating Vehicle Miles Traveled Under CEQA (County 2020b). Per the County's guidelines an initial VMT project screening is needed to determine if a full VMT analysis is required. Land development projects that have one or more of the following attributes may be presumed to create a less than significant impact on transportation and circulation:

- Project in HQTA: The Project is within 0.5 mile (mi) of a Transit Priority Area (TPA) or an HQTA, unless the project is inconsistent with the RTP/SCS, has a floor to area ratio less than 0.75, provides an excessive amount of parking, or reduces the number of affordable residential units.
- Neighborhood Retail Project: The project involves local-serving retail space of less than 50,000 SF.
- Affordable Housing Project: The project is 100 percent affordable-housing units.
- Low VMT Area Project: The Project is in low VMT areas per the most recent Orange County Traffic Analysis Model (OCTAM) version showing the proposed project is within a low VMT area.
- Small Project: A project generates 500 or fewer ADT.
- Public Facilities: The development of institutional/government and public service uses that support community health, safety or welfare are also screened from subsequent CEQA VMT analysis.

Analysis

Criteria: Low VMT Area Project

While the Low VMT Areas of the County of Orange Guidelines do not feature areas within the Santa Ana City limits, the City of Santa Ana Traffic Impact Study Guidelines (Figure 3 of the VMT Memo; City 2019) show that the Project is in low VMT area (15% below County Regional Average). As such, this criterion is met. The Project does not meet any other criteria. Given the Project meets at least one criterion, it is screened out from further VMT analysis under the County of Orange assessment guidelines.

Criteria: Public Facilities

The Project would be a public facility that promotes benefits to the local community by consolidating existing fleet operations into a centralized, more efficient facility that supports essential public services (e.g., maintenance of public works and service vehicles). This consolidation reduces redundant trips between multiple existing sites, streamline fleet operations, and improves response times for public services. In addition, the Project is located within a HQTAs (County 2026b) and in a low-VMT area, which supports employee access via transit and other non-auto modes. Collectively, these factors reduce reliance on personal vehicle travel and lower overall VMT, thereby directly supporting community mobility, air quality, and overall public welfare. This criterion is met.

City of Santa Ana VMT Analysis

Thresholds

The City of Santa Ana's VMT assessment guidelines are specified in Resolution 2019-049 Vehicle Miles Traveled Thresholds of Significance for Purposes of Analyzing Transportation Impacts Under the CEQA. Per the City's guidelines an initial VMT project screening is needed to determine if a full VMT analysis is required. The following criteria are used to determine if the project can be screened out from a VMT assessment:

- Projects which serve the local community and have the potential to reduce VMT, such as neighborhood K-12 schools and local-serving retail less than 50,000 SF. (Charter schools are excluded from this criteria).
- Projects that generate less than 110 net daily trips.
- Projects located within Transit Priority Areas (TPAs). Due to the many high quality transit routes in the City, much of the City is a transit priority area.
 - TPAs are defined as a ½ mile radius around an existing or planned major transit stop (e.g. Metrolink Station, Streetcar Station, etc.) or an existing stop along a high-quality transit corridor. The City guidelines provide a map of Santa Ana TPAs.
 - HQTAs are defined as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.
 - Projects that are in TPAs will also be required to complete a secondary screening step to verify the proposed Project's consistency with the assumptions from the RTP/SCS. This consistency can be a land use review (e.g. are the proposed land uses already included in the RTP/SCS) or can be reviewed from a VMT per service population (VMT/SP) perspective (e.g. does the resulting land use increase or decrease the VMT/SP in the Traffic Analysis Zone (TAZ) compared to the RTP/SCS assumptions).
- Projects located in a low-VMT generating TAZ. Low-VMT TAZs per Santa Ana's threshold of significance are any TAZs generating VMT 15 percent below the Orange County average. The City guidelines provide a map showing the VMT/SP in Santa Ana as compared to the Orange County average. These projects will require two additional secondary screening steps:

1. Verify that the proposed land use is consistent with the existing land use that is generating low VMT/SP. This will include a land use comparison (type, density, demographics, etc.).
2. Verify that the proposed land use is consistent with RTP/SCS assumptions or the project decreases VMT/SP compared to the RTP/SCS.

In addition, the City guidelines provide a map that shows areas in the City that cannot be screened out by being located in a TPA or low-VMT generating area and identify locations where VMT analysis would be required.

Analysis

Criteria: Projects which serve the local community and have the potential to reduce VMT

The Project promotes benefits to the local community by consolidating existing fleet operations into a centralized, more efficient facility that supports essential public services (e.g., maintenance of public works and service vehicles). This consolidation reduces redundant trips between multiple existing sites, streamline fleet operations, and improves response times for public services. In addition, the Project is located within a Transit Priority Area and in a low-VMT area, which supports employee access via transit and other non-auto modes. Collectively, these factors reduce reliance on personal vehicle travel and lower overall VMT, thereby directly supporting community mobility, air quality, and overall public welfare. This criterion is met.

Criteria: Projects located within TPAs

The proposed Project is located within a TPA. Figure 2 of the VMT memo shows that the Project site is located within half-mile around high-quality bus stops per the City's guidelines. The proposed Project is also consistent with the land use assumptions from the RTP/SCS per SCAG GIS Parcel Locator Database (Appendix G). As such, this criterion is met.

Criteria: Project located in a low-VMT generating TAZ

The proposed Project is in a low-VMT generating TAZ. Figure 3 of the VMT Memo shows that according to the VMT/SP map provided by the City guidelines, the Project site is located in a low-VMT TAZ per the City's threshold of significance (TAZ generating VMT 15% below the Orange County average). The proposed land use is also consistent with the existing land use and with RTP/SCS assumptions as noted earlier. As such, this criterion is met.

Criteria: Project located outside Santa Ana development areas that cannot be screened

The proposed Project is located outside the areas in Santa Ana that cannot be screened out by being located in a TPA or low-VMT generating. Figure 4 of the VMT Memo shows that the Project site is located outside of City areas where VMT analysis is required per the City's guidelines.

Based on the VMT screening analysis presented above, the proposed Project is presumed to have a less than significant transportation impact both per County and City Guidelines and no mitigation is required.

- c) *Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?*

Less than Significant Impact. The proposed Project would relocate and consolidate existing OC Fleet Services operations to a County-owned site within an established M1 area and adjacent to existing

County facilities. Fleet maintenance and operations are consistent with the industrial zoning. Therefore, the proposed Project does not introduce new or unusual land uses that would be incompatible with surrounding uses.

With respect to geometric design, the Project would extend existing access roads and driveways from McFadden Avenue and South Grand Avenue to serve the site. These improvements would be designed to match current engineering and safety standards and would primarily serve County staff only. No sharp curves, hazardous roadway alignments, or dangerous intersections are proposed. The internal circulation system is intended to improve vehicle movement, reduce conflicts, and enhance safety for fleet vehicles and employees. Therefore, impacts related to hazardous design features would be less than significant and no mitigation is required.

d) *Would the project result in inadequate emergency access?*

Less than Significant Impact. The Project would avoid obstructing public roads, access points, or designated emergency routes. Construction activities would follow standard traffic control and staging practices to maintain safe access for emergency vehicles and personnel. No road closures would be necessary under the proposed Project. Equipment staging would occur entirely within the Project site boundaries, as shown in Figure 2.

During operations, the facility would not block or impede any established emergency evacuation routes, fire lanes, or other access points critical to the implementation of local emergency response plans. Routine maintenance and material handling would be conducted on-site without creating hazards or obstructions that could interfere with emergency response. The two access roads off McFadden Ave and Grand Ave would comply with the OCFA and California Fire Code requirements, including adequate fire vehicle access, and would be utilized for emergency evacuation from the site.

As a result, the Project would not result in inadequate emergency access, and potential impacts would be less than significant. No mitigation is required.

5.18 TRIBAL CULTURAL RESOURCES

18.	TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☒	☐

18.	TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(b)	A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☒	☐

5.18.1 Impact Analysis

- a) *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?*
- b) *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?*

a & b) Less than Significant with Mitigation Incorporated. Effective July 1, 2015, AB 52 requires meaningful consultation with California Native American Tribes on potential impacts to Tribal Cultural Resources, as defined in Public Resources Code (PRC) Section 21074 as sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are eligible for inclusion in the California Register of Historical Resources or included in a local register of historical resource. Per PRC Section 21080.3.1, a tribe must submit a written request to the relevant lead agency if it wishes to be notified of proposed Projects in its traditionally and culturally affiliated area. The lead agency must provide written formal notification to the tribes that have requested it within 14 days of determining that a project application is complete or of deciding to undertake a project. The tribe must respond to the lead agency within 30 days of receipt of the notification if it wishes to engage in consultation on the project, and the lead agency must begin the consultation process within 30 days of receiving the request for consultation. Consultation concludes when either (1) the parties agree to mitigation measures to avoid a significant effect, if one exists, on a tribal cultural resource, or (2) a party, acting in good faith and after reasonable effort, concludes that mutual

agreement cannot be reached. AB 52 also addresses confidentiality during tribal consultation per PRC Section 21082.3(c).

The NAHC is a state agency that maintains the Sacred Lands File (SLF), an official list of sites that are of cultural and religious importance to California Native American tribes. On May 30, 2025, Chambers Group requested that the NAHC conduct a search of its SLF to determine if sacred lands or resources important to Native Americans have been recorded in the Project site and surrounding half-mile radius. On June 26, 2025, Chambers Group received a response from the NAHC stating that their SLF search was positive.

In compliance with AB 52, the County mailed letters to local Native American tribes that are traditionally and culturally affiliated with the geographic area of the proposed Project and have previously requested to be notified of future projects proposed by the County. The letters, which were sent on August 21, 2025, via certified mail, provided each tribe with an opportunity to request consultation with the County regarding the proposed Project. The purpose of this effort was to provide Native American tribes with the opportunity for meaningful participation and to identify known tribal cultural resources on or near the Project site. The record of tribal consultation efforts is included as Appendix H to this IS/MND.

The following tribes received letters pursuant to AB 52:

- Gabrieleño Band of Mission Indians - Kizh Nation
- Juaneño Band of Mission Indians
- Gabrieleño Tongva San Gabriel Band of Mission Indians
- Soboba Band of Luiseño Indians

As discussed in Section 5.5, Cultural Resources, of this IS/MND, no known cultural resources have been documented within the Project site boundaries or in the direct vicinity of the Project site based on archival research and field surveys. In addition, limited potential exists for the proposed Project to impact tribal cultural resources due to significant prior disturbance from past grading and development activities on the Project site and in the surrounding area. Regulatory Compliance Measure (RCM) CUL-1, identified in Section 5.5, Cultural Resources, sets forth procedures for handling inadvertent discoveries of human remains, including those determined to be Native American.

In addition, the proposed Project would incorporate SC CUL-1 and SC CUL-1, also identified in Section 5.5, Cultural Resources. SC CUL-1 requires the County to retain a Qualified Archaeologist to oversee the project, remain on call, and provide cultural resources sensitivity training to construction personnel on proper procedures and legal protections. SC CUL-2 requires that if cultural resources are discovered, work stops within 50 feet while the archaeologist evaluates the find and, if necessary, implements mitigation, monitoring, and reporting in compliance with regulations. Pursuant to SC CUL-2, any tribal cultural resources encountered during construction of the proposed Project would be evaluated in accordance with federal, State, and local guidelines to assess their significance and identify avoidance or other measures as appropriate.

To date, no other responses from the Native American community have been received as part of the AB 52 tribal consultation effort. As a result of the County's consultation efforts, no known tribal cultural resources have been identified within the Project site. As such, adherence to SC CUL-1, SC

CUL-2, SC TCR-1, and RCM CUL-1 would ensure that impacts related to the inadvertent discovery of Native American resources would be less than significant.

Standard Condition:

SC TCR-1 Unanticipated Discovery of Native American Resources. If unanticipated archaeological resources or Native American Resources or deposits are discovered during ground-disturbing activities, Orange County Public Works (OC Public Works) shall implement the following measures. All work shall halt within a 50-foot radius of the discovery. OC Public Works shall retain a qualified professional archaeologist with knowledge of Native American resources to assess the significance of the find. If the resources are Native American in origin, OC Public Works shall coordinate with the Tribe regarding evaluation, treatment, curation, and preservation of these resources. The archaeologist shall have the authority to modify the no-work radius as appropriate, using professional judgment in consultation with OC Public Works. Work shall not continue within the no work radius until the archaeologist conducts sufficient research and evidence and data collection to establish that the resource is either (1) not cultural in origin; or (2) not potentially eligible for listing on the California Register of Historical Resources. If a potentially eligible resource is encountered, then the archaeologist and OC Public Works, as lead agency, in consultation with the Tribe, shall arrange for either: (1) avoidance of the resource, if possible; or (2) test excavations to evaluate eligibility, and if eligible, attempt to resolve adverse effects through implementation of appropriate mitigation, which may include, but shall not be limited to, salvage excavation, laboratory analysis and processing, research, curation, and preparation of a report summarizing the find. The assessment of eligibility shall be formally documented in writing as verification that the provisions in the California Environmental Quality Act for managing unanticipated discoveries and Public Resources Code Section 5024 have been met.

5.19 UTILITIES AND SERVICE SYSTEMS

19.	UTILITIES/SERVICE SYSTEMS. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
(b)	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
(c)	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
(d)	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐

19.	UTILITIES/SERVICE SYSTEMS. Would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(e)	Comply with federal, state, and local management and reduction statutes and regulations related to solid wastes?	☐	☐	☒	☐

5.19.1 Impact Analysis

- a) *Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or expansion of which could cause significant environmental effects?*

Less than Significant Impact.

Water

The City's water distribution system consists of approximately 480 miles of transmission/distribution mains ranging from four to 30 inches in diameter. Across the City's 27-square-mile service area, water is supplied by the Irvine Ranch Water District (IRWD), Metropolitan Water District of Southern California (MWD), and Orange County Water District (OCWD) from groundwater, imported water, and recycled water (City 2021).

The proposed Project includes installation of on-site utilities, including sewer lines, water lines, and storm drain lines. These utility improvements would be constructed within the Project site and would connect to existing off-site utility systems already serving the surrounding developed area. The proposed Project would increase demand for water as compared to existing conditions, and on-site infrastructure is required for Project implementation. However, as discussed in Threshold b) below, impacts regarding water supply would be less than significant and no mitigation is required.

Wastewater

Wastewater services in the City are provided by Orange County Sanitation District (OCSD), which operates Reclamation Plan No. 1 and Treatment Plant No 2. Collectively these facilities treated an average of 184 million gallons per day (MGD) from 2024 to 2025 (OCSD 2025). According to the MWDOC 2020 UWMP, Reclamation Plant No. 1 has a maximum treatment capacity of 320 MGD and Treatment Plant No. 2 has a maximum treatment capacity of 312 MGD (MWDOC 2021). Given there is a remaining capacity of 448 MGD for wastewater treatment, it is reasonable to assume that the incremental increase in wastewater from the proposed Project would not have a significant impact on the OCSD wastewater treatment facilities. A less than significant wastewater impact would occur and no mitigation is required.

Stormwater Drainage

The proposed Project would install on-site stormwater infrastructure (e.g., drainage pipes and inlets) to collect and convey runoff to existing municipal storm drain facilities located adjacent to the Project site. Specifically, the Project would include:

- An internal storm drain network;

- Underground detention facilities; and
- Water quality BMPs (BMPs; e.g., modular wetlands or bioretention)

The outdoor yard shall be equipped with hose bibs and floor drains to facilitate cleaning and drainage. The yard surface shall be sloped toward the drains at the maximum grade permitted by applicable codes to ensure that water flows freely to the drains, preventing ponding. This design will allow the area to dry quickly after washing or rainfall without requiring manual sweeping or brooming of water into the drains. A less than significant stormwater drainage impact would occur and no mitigation is required.

Electric Power, Natural Gas, and Telecommunications

Electric power is provided to the City by SCE and natural gas is provided by the Southern California Gas Company (SoCalGas). Internet, phone, and satellite in the City are currently provided by a variety of private sources, including AT&T, Time Warner Cable, Spectrum, Windstream, and Mediacom.

According to the City's General Plan Update EIR, total electricity consumption in SCE's service area was 106,080 gigawatt-hour (GWh) in 2015 and is forecasted to increase to 118,803 GWh in 2027. Therefore, there is an anticipated increase of 12,723 GWh in electricity consumption between 2015 and 2027 in the entire SCE service area. The net forecasted increase of electricity consumption in the Santa Ana area is anticipated to be 256 GWh per year (City 2025).

As discussed in Section 5.6, *Energy*, the Project would consume a less than significant amount of electricity and natural gas, thus it is reasonable to assume that existing and planned utility infrastructure would be sufficient to meet the Project's demand without requiring the construction of new or expanded facilities that could cause significant environmental impacts. Likewise, the Project would not create substantial demand for telecommunications services beyond what is already provided in the City by existing providers. Therefore, the Project would not result in significant impacts related to electric power, natural gas, or telecommunications and no mitigation is required.

- b) *Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal dry and multiple dry years?*

Less than Significant Impact. The City's 2020 UWMP outlines current water demands, sources, and supply reliability to the City by forecasting water use based on climate, demographics, and land use changes within the City (MWDOC 2021). The MWDOC UWMP, concluded that they can meet full-service demands of their member agencies through 2045 during normal years, single-dry years and multiple-dry years (MWDOC 2021).

The proposed Project would require water for the daily needs of County faculty, washing vehicles and equipment cleaning as needed, and landscaping irrigation. Based on the CalEEMod output contained in Appendix A, Project operations are estimated to require 8,273,265 gallons per year for indoor water use and 259,130 gallons per year for outdoor water use. The Project would utilize drought-tolerant landscaping to reduce irrigation water usage. Additionally, the Project would be required to comply with water efficiency standards in the California Building Energy Efficiency Standards and the California Green Building Standards Code. Although the Project would result in an incremental increase in water demand, it is anticipated that MWDOC would be able to sufficiently accommodate this. Impact regarding sufficient water supplies available to serve the project and reasonably

foreseeable future development during normal dry and multiple dry years would be less than significant. No mitigation is required.

- c) *Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*

Less than Significant Impact. As previously discussed, the City's wastewater treatment facilities treated an average of 184 MGD from 2024 to 2025 (OCSD 2025). The City's Reclamation Plant No. 1 has a maximum treatment capacity of 320 MGD and Treatment Plant No. 2 has a maximum treatment capacity of 312 MGD (MWDOC 2021). Given there is a remaining capacity of 448 MGD for wastewater treatment, it is reasonable to assume that the incremental increase in wastewater from the proposed Project would not have a significant impact on the OCSD wastewater treatment facilities. A less than significant wastewater impact would occur and no mitigation is required.

- d) *Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?*

Less than Significant Impact. The County operates three landfills to serve the region: Olinda Alpha Landfill, Frank R. Bowerman Landfill, and Prima Deshecha Landfill. The Olinda Alpha Landfill has a remaining capacity of 17.5 million cubic yards and a maximum daily throughput of 8,000 tons per day (CalRecycle 2025a). The Frank R. Bowerman Landfill has a remaining capacity of 160 million cubic yards and a maximum daily throughput of 11,500 tons per day (CalRecycle 2025b). The Prima Deshecha Landfill has a remaining capacity of 128.8 million cubic yards and a maximum daily throughput of 4,000 tons per day (CalRecycle 2025c).

According to CalRecycle, an auto dealer and service station waste generation source would produce 0.9 pounds per 100 SF per day (CalRecycle 2006). Therefore, based on the footprint of the proposed buildings, the Project would generate approximately 591 pounds (0.30 tons) of solid waste per day. This comprises approximately 0.00013 percent of the combined daily throughputs of all County landfills. Further, operation of the Project would not represent a new source of waste because it involves the relocation and consolidation of existing OC Fleet Services operations rather than the introduction of new services or expanded capacity. Waste generation would remain comparable to existing conditions.

Construction of the proposed Project would be subject to Construction and Demolition (C&D) waste diversion requirements under CALGreen Code Section 5.408, which mandates 65% diversion of C&D debris. Construction waste drop-off locations include, but are not limited to, Madison Materials / Ware Disposal in Santa Ana, CR Transfer and Material Recovery Facility in Stanton, and other County-approved C&D recycling facilities in Orange County.

Given the relatively minimal amount of solid waste anticipated to be generated during Project operations and the Project's compliance with existing regulations governing construction waste, solid waste impacts would be less than significant and no mitigation is required.

- e) *Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?*

Less than Significant Impact. The proposed Project would generate solid waste during both construction and operation. Construction waste would primarily consist of debris such as wood,

metal, concrete, and packaging materials. These materials would be disposed of or recycled in compliance with CALGreen Code Section 5.408, as previously discussed.

During operation, solid waste generated by the proposed Project would be collected by a franchise hauler and disposed of at the County's active landfills (Olinda Alpha, Frank R. Bowerman, and Prima Deshecha). As previously discussed, the Project would generate a nominal amount of waste compared to the large permitted daily throughput of the three active County landfills.

The Project would be required to comply with all applicable federal, state, and local statutes and regulations related to solid waste, including AB 939 (Integrated Waste Management Act), AB 341 (Mandatory Commercial Recycling), AB 1826 (Mandatory Commercial Organics Recycling), SB 1383 (Short-Lived Climate Pollutants), and the Orange County Integrated Waste Management Department's (OC Waste & Recycling) policies and programs for waste diversion and recycling. Compliance with these programs ensures that solid waste generated by the Project would be managed and reduced consistently with applicable regulations. Therefore, the Project would not result in a significant impact related to solid waste management or compliance with applicable statutes. No mitigation is required.

5.20 WILDFIRE

20.	WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
(b)	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
(c)	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
(d)	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

5.20.1 Impact Analysis

a) *Would the project impair an adopted emergency response plan or emergency evacuation plan?*

Less than Significant Impact. The Unified County of Orange and Orange County Operational Area Emergency Operation Plan describe the emergency organization and the process of preparing, responding to, and recovering from disasters (County 2019).

Neither the County GP Safety Element nor the City of Santa Ana GP Safety Element provide an evacuation route as part of the Project area. The Project would avoid obstructing public roads, access points, or designated emergency routes. Construction activities would follow standard traffic control

and staging practices to maintain safe access for emergency vehicles and personnel. No road closures would be necessary under the proposed Project. Equipment staging would occur entirely within the Project site boundaries, as shown in Figure 2.

During operations, the facility would not block or impede any established emergency evacuation routes, fire lanes, or other access points critical to the implementation of local emergency response plans. Routine maintenance and material handling would be conducted on-site without creating hazards or obstructions that could interfere with emergency response. The two access roads off McFadden Ave and Grand Ave would comply with the OCFA and California Fire Code requirements, including adequate fire vehicle access, and would be utilized for emergency evacuation from the site.

As a result, the Project would not impair or physically interfere with adopted emergency response or evacuation plans, and potential impacts would be less than significant and no mitigation is required.

- b) *Would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?*

No Impact. The Project site is located in an urbanized area and there are no large, undeveloped areas and/or steep slopes on or near the site that may pose wildfire hazards. The Project site is not within, nor adjacent to, a Fire Hazard Severity Zone (FHSZ) of State or local responsibility (CALFire 2025). The Project would be required to adhere to the CBC and California Fire Code.

Furthermore, the existing Project site is dominated by flammable ruderal, non-native vegetation. Development of the Project would remove this vegetation and replace it with impervious surfaces, thereby reducing the site's overall fuel load and wildfire risk. Therefore, the Project would not expose Project occupants to pollutant concentrations from a wildfire; no impact would occur and no mitigation is required.

- c) *Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?*

Less than Significant Impact. Proposed development of the currently undeveloped site with a Fleet Services Facility, paved surfaces, and irrigated landscaping would reduce the existing wildfire risk by significantly decreasing the on-site vegetative fuel load. Infrastructure improvements such as access roads, water and sewer lines, and stormwater drainage systems would be installed within the Project site and would connect to existing utility systems. These improvements are typical of urban development and would not introduce features known to increase fire risk, such as elevated power lines. The Project would also coordinate with OCFA to ensure compliance with applicable fire protection and emergency access requirements. Impacts related to installation or maintenance of associated infrastructure that could exacerbate fire risk or result in temporary or ongoing environmental effects would be less than significant. No mitigation is required.

- d) *Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability or drainage changes?*

No Impact. As previously discussed in Section 5.7.1 Threshold a)iv), the Project site is not within, nor adjacent to a Landslide Zone (DOC 2024b). There are no substantial hazards with respect to slope stability given the Project site and surrounding areas are mostly flat. Additionally, the Project site is

designated as a Zone X Area of Minimal Flood Hazard (FEMA 2009). No impact related to exposing people or structures to significant risks would occur and no mitigation is required.

5.21 MANDATORY FINDINGS OF SIGNIFICANCE

21.	MANDATORY FINDINGS OF SIGNIFICANCE.	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a)	Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☒	☐
(b)	Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects?)	☐	☐	☒	☐
(c)	Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

5.21.1 Impact Analysis

a) *Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?*

Less than Significant Impact. As discussed in Section 5.4, *Biological Resources*, the Project site is fully developed and dominated by disturbed ruderal vegetation, ornamental landscaping, and existing infrastructure, with little to no biological habitat value. The Biological Reconnaissance Survey determined that all 44 special status plant species evaluated are absent from the Project site, and no suitable habitat is present to support their occurrence. Similarly, of the 14 special status wildlife species with a potential to occur in the vicinity, 13 are absent due to the highly urbanized conditions and lack of required habitat features, and one species (burrowing owl) has only a low potential to occur due to minimal marginal habitat. No special status species were observed during field surveys, and the Project site does not function as wildlife habitat, a movement corridor, or a nursery site. The Project would not result in habitat loss, population declines, or reductions in the range or abundance of rare, threatened, or endangered species, nor would it threaten the elimination of any plant or animal community.

In addition, as discussed in Section 5.5, *Cultural Resources*, no historical resources or significant archaeological resources were identified within the Project site. While there is a low potential for encountering buried archaeological materials associated with historic agricultural use, implementation of standard conditions (SC CUL-1) would ensure that any inadvertent discoveries are properly evaluated and treated in accordance with applicable regulations. With mitigation, impacts to archaeological resources would be less than significant, and the Project would not eliminate or adversely affect important examples of the major periods of California history or prehistory.

- b) *Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects?)*

Less than Significant Impact. The Project involves development of a public fleet services facility to consolidate two existing fleet facility sites into one location, including a 45,706 SF maintenance building, a future 20,000 SF operations building, solar canopy, parking, access road, and disposal lot. Its scale, use, and operational characteristics are consistent with existing land uses in the surrounding area and do not introduce land uses, traffic, emissions, or noise levels that would substantially add to cumulative environmental effects.

When considered in combination with the related projects (see Table 3) in the surrounding area (including the Park 55 Industrial Redevelopment Project, Warner Redhill Mixed-Use Development, Legado at the Met, Santa Ana Lyon Towns, MLC Holdings/Meritage Homes, Cabrillo Crossing Townhomes, The Madison, Central Pointe Mixed-Use Development, and Think Together Residential Development) the Project's incremental contribution to cumulative impacts would be negligible. Each of these projects involves redevelopment or new construction in urbanized areas and is subject to its own environmental review under CEQA, including assessment of potential impacts such as land use, traffic, air quality, noise, and utilities. Therefore, the environmental effects of those projects are being addressed independently, and any potential cumulative effects are already mitigated or minimized through their respective approvals and mitigation measures.

The proposed Project itself does not introduce new significant impacts, and because the Project is small relative to the scale of development in the surrounding area, its addition would not meaningfully increase cumulative effects. Compliance with existing regulations and standard operational controls (e.g., for traffic circulation, stormwater management, and site operations) further ensures that the Project's contribution to cumulative environmental impacts is not considerable. Additionally, the Project would relocate and consolidate existing County fleet services operations and would not introduce a new public-serving land use. Because it reorganizes an existing function rather than expanding service capacity or intensity, the Project would not generate substantial new demand for traffic, utilities, or other infrastructure that could otherwise result in a cumulatively considerable impact.

Accordingly, the Project's incremental effects, when considered in combination with past, present, and reasonably foreseeable future projects, would not be cumulatively considerable.

- c) *Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?*

Less than Significant Impact. Environmental effects that may cause substantial adverse effects on humans typically result from impacts related to air quality and GHGs; noise; hazardous materials; ground shaking; hazardous design features with respect to transportation and roadway designs; and wildfire. The analysis contained in Sections 5.3, 5.7, 5.8, 5.9, 5.13, 5.17, and 5.20 of this document indicates that impacts would be less than significant to the environmental areas mentioned above and, therefore, would not cause substantial adverse impacts to human beings. Impacts towards human beings, either directly or indirectly, would be less than significant.

SECTION 6.0 – MITIGATION MONITORING AND REPORTING PROGRAM

Public Resources Code, Section 21081.6 (Assembly Bill 3180) requires that mitigation measures identified in environmental review documents prepared in accordance with CEQA are implemented after a project is approved. Therefore, this MMRP has been prepared to ensure compliance with the adopted mitigation measures during the construction phase and operation phase of the Fleet Services New Building Project.

The County is the agency responsible for implementation of the mitigation measures identified in the MND. This MMRP provides the County with a convenient mechanism for quickly reviewing all the mitigation measures including the ability to focus on select information such as timing. The MMRP includes the following information for each mitigation measure:

- The phase of the project during which the required mitigation measure must be implemented;
- The phase of the project during which the required mitigation measure must be monitored; and
- The enforcement agency.

The MMRP includes a checklist to be used during the mitigation monitoring period. The checklist will verify the name of the monitor, the date of the monitoring activity, and any related remarks for each mitigation measure.

In addition to the Mitigation Measures shown in the MMRP, the Project shall implement Standard Conditions of Approval (SCs) and Regulatory Compliance Measures (RCMs). SCs and RCMs are existing requirements, regulations, and standard practices that apply to the Project independent of CEQA and are not mitigation measures adopted to reduce or avoid significant environmental impacts.

MITIGATION MONITORING AND REPORTING PROGRAM Fleet Services New Building Project							
Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation	Verification of Compliance		
					Initial	Date	Remarks
Geology and Soils							
MM PAL-1 Prior to the issuance of a grading permit, the County shall be required to obtain the services of a Qualified Project Paleontologist to remain on call for the duration of the proposed ground-disturbing construction activity. The paleontologist selected must be approved by the County. Upon approval or request by the County, a Paleontological Mitigation Plan (PMP) outlining procedures for paleontological data recovery shall be prepared for the Project and submitted to the County for review and approval. The development and implementation of the PMP shall include consultations with the County’s Engineering Geologist as well as a requirement that the curation of all specimens recovered under any scenario shall be through an appropriate repository agreed upon by the County. If the County accepts ownership, the curation location may be revised. The PMP shall include developing a multilevel ranking system, or Potential Fossil Yield Classification (PFYC), as a tool to demonstrate the potential yield of fossils within a given stratigraphic unit. The PMP	Pre-Construction and Construction	Construction and Post-Construction	Orange County	Less than Significant			

MITIGATION MONITORING AND REPORTING PROGRAM Fleet Services New Building Project							
Mitigation Measure	Implementation Phase	Monitoring Phase	Enforcement Agency	Level of Significance After Mitigation	Verification of Compliance		
					Initial	Date	Remarks
shall outline the monitoring and salvage protocols to address paleontological resources encountered during Project-related ground-disturbing activities, as well as the appropriate recording, collection, and processing protocols to appropriately address any resources discovered. At the completion of all ground-disturbing activities, the Project Paleontologist shall prepare a final paleontological mitigation report summarizing any monitoring efforts and observations, as performed in line with the PMP, and all paleontological resources encountered, if any. As well as providing follow-up reports and records for specific discoveries, as necessary.							

STANDARD CONDITIONS OF APPROVAL AND REGULATORY COMPLIANCE MEASURES Fleet Services New Building Project	
Measure	
Standard Conditions of Approval	
SC CUL-1	The County shall retain the services of a Qualified Archaeologist, meeting the Secretary of the Interior Standards, and County requirements. The Qualified Archaeologist shall remain on call

STANDARD CONDITIONS OF APPROVAL AND REGULATORY COMPLIANCE MEASURES Fleet Services New Building Project	
Measure	
	throughout the Project. The Qualified Archaeologist or cultural resources specialist working under the direction of the Qualified Archaeologist, shall provide an initial cultural resources sensitivity training (which may be incorporated within a more comprehensive or multi-discipline Worker Environmental Awareness Program [WEAP]) to inform all construction personnel prior to construction activities about the proper procedures in the event of an archaeological discovery. The cultural resources sensitivity training is necessary to inform the construction personnel of the potential to encounter buried cultural resources and provide examples of potential cultural materials that may be encountered. The training shall be held in conjunction with the Project's initial on-site safety meeting and shall explain the applicable protocols, procedures, and legal basis for the protection of significant archaeological resources.
SC CUL-2	In the event of an inadvertent discovery of potential cultural resources (artifacts or features) during ground-disturbing activities, construction activities within a 50-foot radius of the discovery shall be halted while the Qualified Archaeologist assesses the find. The archaeologist shall evaluate the find in accordance with federal, State, and local guidelines, including those set forth in the California Public Resources Code Section 21083.2, to assess the significance of the find and identify avoidance or other measures as appropriate. If the resource is determined to be significant or unique through significance evaluation, and avoidance is not possible, appropriate mitigation or treatment shall be established and implemented. These might include a cultural resources mitigation and monitoring plan, treatment plans, or data recovery programs. All monitoring or associated plans would be prepared and implemented under the direction of the Qualified Archaeologist. All required close-out reporting or archaeological site records would be completed in accordance with the Office of Historic Preservation's guidelines and submitted to the appropriate CHRIS Information Center (IC), as necessary.
Regulatory Compliance measures	

STANDARD CONDITIONS OF APPROVAL AND REGULATORY COMPLIANCE MEASURES Fleet Services New Building Project	
Measure	
RCM CUL-1 Human Remains	In the event that human remains are encountered on the project site, work within 50 feet of the discovery shall be redirected and the County Coroner notified immediately consistent with the requirements of CCR Section 15064.5(e). State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code (PRC) Section 5097.98. If the remains are determined to be Native American, the County Coroner shall notify the NAHC, which shall determine and notify a Most Likely Descendant (MLD). With the permission of the property owner, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and non-destructive analysis of human remains and items associated with Native American burials. Consistent with CCR Section 15064.5(d), if the remains are determined to be Native American and an MLD is notified, the County shall consult with the MLD as identified by the NAHC to develop an agreement for treatment and disposition of the remains. Prior to the issuance of grading permits, the Director of the Orange County Public Works Department, or designee, shall verify that all grading plans specify the requirements of CCR Section 15064.5(e), State Health and Safety Code Section 7050.5, and PRC Section 5097.98, as stated above.
RCM GEO-1 Geotechnical Investigation	Pursuant to PRC Chapter 7.8 Section 2697, prior to the approval of a project located in a seismic hazard zone, the Project proponent shall prepare a geotechnical report defining and delineating any seismic hazard. The County of Orange must have a site-specific geotechnical investigation conducted by a licensed professional to identify and evaluate the potential for seismic-related ground failure, including liquefaction, and to recommend appropriate design and construction project features or measures to be implemented for the Project.

STANDARD CONDITIONS OF APPROVAL AND REGULATORY COMPLIANCE MEASURES Fleet Services New Building Project	
Measure	
RCM HYD-1 Construction General Permit	Prior to issuance of a grading permit, the Project Applicant shall obtain coverage under the SWRCB National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities, Order No. 2022-0057-DWQ, NPDES No. CAS000002 (Construction General Permit). This shall include submission of Permit Registration Documents (PRDs), including a Notice of Intent for coverage under the permit to the SWRCB via the Stormwater Multiple Application and Report Tracking System (SMARTs). The Project Applicant shall provide the Waste Discharge Identification Number (WDID) to the Director of the County of Orange (County) Public Works Department, or designee, to demonstrate proof of coverage under the Construction General Permit. Project construction shall not be initiated until a WDID is received from the SWRCB and is provided to the Director of the County Public Works Department, or designee. A SWPPP shall be prepared and implemented for the proposed project in compliance with the requirements of the Construction General Permit. The SWPPP should identify construction BMPs to be implemented to ensure that the potential for soil erosion and sedimentation is minimized and to control the discharge of pollutants in stormwater runoff as a result of construction activities. Upon completion of construction and stabilization of the site, a Notice of Termination shall be submitted via the SMARTs.

STANDARD CONDITIONS OF APPROVAL AND REGULATORY COMPLIANCE MEASURES Fleet Services New Building Project	
Measure	
RCM HYD-2 MS4 Permit	Prior to the issuance of grading or building permits, the Project Applicant shall submit a Final WQMP to the Orange County Public Works Department, or designee, for review and approval in compliance with the requirements of the NPDES <i>Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds Within the Orange County Region</i>, Order No. R8-2009-0030, NPDES No. CAS618030 as amended by Order No. R8-2010-0062 (MS4 Permit). The Final WQMP shall be prepared consistent with the requirements of the County of Orange Technical Guidance Document for Water Quality Management Plans (TGD) and the North Orange County Water Quality Management Plan template, or subsequent guidance manuals. The Final WQMP shall specify the BMPs to be incorporated into the project design to target pollutants of concern in runoff from the project site. The Orange County Public Works Department, or designee, shall ensure that the BMPs specified in the Final WQMP are incorporated into the final project design, and shall implement, maintain and operate all such BMPs in a timely and reasonably diligent manner.
RCM HYD-3 Final Hydrology Report	Prior to issuance of a grading permit, the Project Applicant shall prepare a Final Hydrology Report to demonstrate that the post-construction runoff from the project site does not exceed existing conditions. The Project Applicant shall provide the Final Hydrology Report to the Director of the Orange County Public Works Department, or their designee, for review and approval.

1.0 INTRODUCTION

1.1 Purpose of Analysis and Study Objectives

This Air Quality, Energy, and Greenhouse Gas (GHG) Emissions Impact Analysis has been completed to determine the air quality, energy, and GHG emissions impacts associated with the proposed New Fleet Service Facility project (proposed project). The following is provided in this report:

- A description of the proposed project;
- A description of the atmospheric setting;
- A description of the criteria pollutants and GHGs;
- A description of the air quality regulatory framework;
- A description of the energy conservation regulatory framework;
- A description of the GHG emissions regulatory framework;
- A description of the air quality, energy, and GHG emissions thresholds including the California Environmental Quality Act (CEQA) significance thresholds;
- An analysis of the conformity of the proposed project with the South Coast Air Quality Management District (SCAQMD) Air Quality Management Plan (AQMP);
- An analysis of the short-term construction related and long-term operational air quality, energy, and GHG emissions impacts; and
- An analysis of the conformity of the proposed project with all applicable energy and GHG emissions reduction plans and policies.

1.2 Site Locations and Study Area

The project site is located at 1400 S. Grand Avenue in the City of Santa Ana (City). The approximately 4.59-acre project site is mostly vacant other than the western and northern portions that are currently paved and is bounded by John F. Kennedy Elementary School and McFadden Avenue to the north, the Orange County Operations Center and a County Data Center located to the west, industrial uses to the south, and the Union Pacific Santa Ana Industrial Lead (Railroad) and multi-family residential uses to the west. The project local study area is shown in Figure 1.

Sensitive Receptors in Project Vicinity

The nearest sensitive receptor to the project site is the John F. Kennedy Elementary School that is adjacent to the north side of the project site. There are also the multi-family homes that are as near as 95 feet west of the project site.

1.3 Proposed Project Description

The project site would be developed with a new 45,706 square foot Fleet Services Building that will include vehicle maintenance bays, administrative staff offices, technician workspaces, and storage spaces. In addition, the project will include a future 20,000 square foot Facilities Operations Building, a 10,000 square foot solar panel canopy, surface parking spaces, extended access road, and a disposal lot. The Fleet Services Facility is proposed to be addressed as 1310 South Grand Avenue, and the Facility

Operations Building would be addressed as 1324 South Grand Avenue. The proposed project would extend the existing access roads to provide ingress and egress for the Project site via the existing driveways off McFadden Avenue and South Grand Avenue. The proposed site plan is shown in Figure 2.

Construction of the proposed project is expected to occur from July 2026 to December 2027, over an 18-month period. Construction activities will take place from 7:00 a.m. to 8:00 p.m. Monday through Saturday and no construction work will occur on Sundays or Federal holidays, per the County's Noise Control ordinance. Operations would primarily consist of providing maintenance and repair services to over 3,000 County-owned vehicles and equipment. These services ensure the safety and longevity of County-owned vehicles while maintaining compliance with vehicle rules and regulations. Approximately 50 employees would operate the proposed facility Monday through Friday.

1.4 Executive Summary

Standard Air Quality, Energy, and GHG Regulatory Conditions

The proposed project will be required to comply with the following regulatory conditions from the SCAQMD and State of California (State).

South Coast Air Quality Management District Rules

The following lists the SCAQMD rules that are applicable, but not limited to the proposed project.

- Rule 402 Nuisance – Controls the emissions of odors and other air contaminants;
- Rule 403 Fugitive Dust – Controls the emissions of fugitive dust;
- Rules 1108 and 1108.1 Cutback and Emulsified Asphalt – Controls the VOC content in asphalt;
- Rule 1113 Architectural Coatings – Controls the VOC content in paints and solvents; and
- Rule 1143 Paint Thinners – Controls the VOC content in paint thinners.

State of California Rules

The following lists the State of California Code of Regulations (CCR) air quality emission rules that are applicable, but not limited to the proposed project.

- CCR Title 13, Article 4.8, Chapter 9, Section 2449 – In use Off-Road Diesel Vehicles;
- CCR Title 13, Section 2025 – On-Road Diesel Truck Fleets;
- CCR Title 24 Part 6 – California Building Energy Standards; and
- CCR Title 24 Part 11 – California Green Building Standards.

Summary of Analysis Results

The following is a summary of the proposed project's impacts with regard to the State CEQA Guidelines air quality, energy, and GHG emissions checklist questions.

Conflict with or obstruct implementation of the applicable air quality plan?

Less than significant impact.

Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard?

Less than significant impact.

Expose sensitive receptors to substantial pollutant concentrations?

Less than significant impact.

Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less than significant impact.

Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation;

Less than significant impact.

Conflict with or obstruct a state or local plan for renewable energy;

Less than significant impact.

Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?

Less than significant impact.

Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs?

Less than significant impact.

1.5 Mitigation Measures for the Proposed Project

This analysis found that implementation of the State and SCAQMD air quality, energy, and GHG emissions reductions regulations were adequate to limit criteria pollutants, toxic air contaminants, odors, and GHG emissions from the proposed project to less than significant levels. No mitigation measures are required for the proposed project with respect to air quality, energy, and GHG emissions.

Project Local Study Area

Figure 2
Proposed Site Plan

2.0 AIR POLLUTANTS

Air pollutants are generally classified as either criteria pollutants or non-criteria pollutants. Federal ambient air quality standards have been established for criteria pollutants, whereas no ambient standards have been established for non-criteria pollutants. For some criteria pollutants, separate standards have been set for different periods. Most standards have been set to protect public health. For some pollutants, standards have been based on other values (such as protection of crops, protection of materials, or avoidance of nuisance conditions). A summary of federal and state ambient air quality standards is provided in the Regulatory Framework section.

2.1 Criteria Pollutants and Ozone Precursors

The criteria pollutants consist of: ozone, nitrogen oxides (NO_x), CO, sulfur oxides (SO_x), lead, and particulate matter (PM). The ozone precursors consist of NO_x and VOC. These pollutants can harm your health and the environment, and cause property damage. The Environmental Protection Agency (EPA) calls these pollutants “criteria” air pollutants because it regulates them by developing human health-based and/or environmentally-based criteria for setting permissible levels. The following provides descriptions of each of the criteria pollutants and ozone precursors.

Nitrogen Oxides

NO_x is the generic term for a group of highly reactive gases which contain nitrogen and oxygen. While most NO_x are colorless and odorless, concentrations of nitrogen dioxide (NO₂) can often be seen as a reddish-brown layer over many urban areas. NO_x form when fuel is burned at high temperatures, as in a combustion process. The primary manmade sources of NO_x are motor vehicles, electric utilities, and other industrial, commercial, and residential sources that burn fuel. NO_x reacts with other pollutants to form, ground-level ozone, nitrate particles, acid aerosols, as well as NO₂, which cause respiratory problems. NO_x and the pollutants formed from NO_x can be transported over long distances, following the patterns of prevailing winds. Therefore, controlling NO_x is often most effective if done from a regional perspective, rather than focusing on the nearest sources.

Ozone

Ozone is not usually emitted directly into the air, instead it is created by a chemical reaction between NO_x and VOCs in the presence of sunlight. Motor vehicle exhaust, industrial emissions, gasoline vapors, chemical solvents as well as natural sources emit NO_x and VOC that help form ozone. Ground-level ozone is the primary constituent of smog. Sunlight and hot weather cause ground-level ozone to form with the greatest concentrations usually occurring downwind from urban areas. Ozone is subsequently considered a regional pollutant. Ground-level ozone is a respiratory irritant and an oxidant that increases susceptibility to respiratory infections and can cause substantial damage to vegetation and other materials. Because NO_x and VOC are ozone precursors, the health effects associated with ozone are also indirect health effects associated with significant levels of NO_x and VOC emissions.

Carbon Monoxide

Carbon monoxide (CO) is a colorless, odorless gas that is formed when carbon in fuel is not burned completely. It is a component of motor vehicle exhaust, which contributes approximately 56 percent of all CO emissions nationwide. In cities, 85 to 95 percent of all CO emissions may come from motor vehicle exhaust. Other sources of CO emissions include industrial processes (such as metals processing and chemical manufacturing), residential wood burning, and natural sources such as forest fires. Woodstoves,

gas stoves, cigarette smoke, and unvented gas and kerosene space heaters are indoor sources of CO. The highest levels of CO in the outside air typically occur during the colder months of the year when inversion conditions are more frequent. The air pollution becomes trapped near the ground beneath a layer of warm air. CO is described as having only a local influence because it dissipates quickly. Since CO concentrations are strongly associated with motor vehicle emissions, high CO concentrations generally occur in the immediate vicinity of roadways with high traffic volumes and traffic congestion, active parking lots, and in automobile tunnels. Areas adjacent to heavily traveled and congested intersections are particularly susceptible to high CO concentrations.

CO is a public health concern because it combines readily with hemoglobin and thus reduces the amount of oxygen transported in the bloodstream. The health threat from lower levels of CO is most serious for those who suffer from heart disease such as angina, clogged arteries, or congestive heart failure. For a person with heart disease, a single exposure to CO at low levels may cause chest pain and reduce that person's ability to exercise; repeated exposures may contribute to other cardiovascular effects. High levels of CO can affect even healthy people. People who breathe high levels of CO can develop vision problems, reduced ability to work or learn, reduced manual dexterity, and difficulty performing complex tasks. At extremely high levels, CO is poisonous and can cause death.

Sulfur Oxides

SO_x gases are formed when fuel containing sulfur, such as coal and oil is burned, as well as from the refining of gasoline. SO_x dissolves easily in water vapor to form acid and interacts with other gases and particles in the air to form sulfates and other products that can be harmful to people and the environment. Exposure to SO_x gases can cause respiratory symptoms (bronchoconstriction, possible wheezing or shortness of breath) during exercise or physical activity in persons with asthma and cause possible allergic sensitization, airway inflammation, and asthma development.

Lead

Lead is a metal found naturally in the environment as well as manufactured products. The major sources of lead emissions have historically been motor vehicles and industrial sources. Due to the phase out of leaded gasoline, metal processing is now the primary source of lead emissions to the air. High levels of lead in the air are typically only found near lead smelters, waste incinerators, utilities, and lead-acid battery manufacturers. Exposure of fetuses, infants and children to low levels of lead can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased lead levels are associated with increased blood pressure.

Particulate Matter

PM is the term for a mixture of solid particles and liquid droplets found in the air. PM is made up of a number of components including acids (such as nitrates and sulfates), organic chemicals, metals, and soil or dust particles. The size of particles is directly linked to their potential for causing health problems. Particles that are less than 10 micrometers in diameter (PM₁₀) that are also known as *Respirable Particulate Matter* are the particles that generally pass through the throat and nose and enter the lungs. Once inhaled, these particles can affect the heart and lungs and cause serious health effects. Particles that are less than 2.5 micrometers in diameter (PM_{2.5}) that are also known as *Fine Particulate Matter* have been designated as a subset of PM₁₀ due to their increased negative health impacts and its ability to remain suspended in the air longer and travel further.

Volatile Organic Compounds

Hydrocarbons are organic gases that are formed from hydrogen and carbon and sometimes other elements. Hydrocarbons that contribute to formation of ozone are referred to and regulated as VOCs (also referred to as reactive organic gases). Combustion engine exhaust, oil refineries, and fossil-fueled power plants are the sources of hydrocarbons. Other sources of hydrocarbons include evaporation from petroleum fuels, solvents, dry cleaning solutions, and paint.

VOC is not classified as a criteria pollutant, since VOCs by themselves are not a known source of adverse health effects. The primary health effects of VOCs result from the formation of ozone and its related health effects. High levels of VOCs in the atmosphere can interfere with oxygen intake by reducing the amount of available oxygen through displacement. Carcinogenic forms of hydrocarbons, such as benzene, are considered TACs. There are no separate health standards for VOCs as a group.

2.2 Other Pollutants of Concern

Toxic Air Contaminants

In addition to the above-listed criteria pollutants, TACs are another group of pollutants of concern. TACs is a term that is defined under the California Clean Air Act and consists of the same substances that are defined as Hazardous Air Pollutants (HAPs) in the Federal Clean Air Act. There are over 700 hundred different types of TACs with varying degrees of toxicity. Sources of TACs include industrial processes such as petroleum refining and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Cars and trucks release at least 40 different toxic air contaminants. The most important of these TACs, in terms of health risk, are diesel particulates, benzene, formaldehyde, 1,3-butadiene, and acetaldehyde. Public exposure to TACs can result from emissions from normal operations as well as from accidental releases. Health effects of TACs include cancer, birth defects, neurological damage, and death.

TACs are less pervasive in the urban atmosphere than criteria air pollutants, however they are linked to short-term (acute) or long-term (chronic or carcinogenic) adverse human health effects. There are hundreds of different types of TACs with varying degrees of toxicity. Sources of TACs include industrial processes, commercial operations (e.g., gasoline stations and dry cleaners), and motor vehicle exhaust.

According to *The California Almanac of Emissions and Air Quality 2013 Edition*, the majority of the estimated health risk from TACs can be attributed to relatively few compounds, the most important of which is diesel particulate matter (DPM). DPM is a subset of PM_{2.5} because the size of diesel particles are typically 2.5 microns and smaller. The identification of DPM as a TAC in 1998 led the California Air Resources Board (CARB) to adopt the Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-fueled Engines and Vehicles in October 2000. The plan's goals are a 75-percent reduction in DPM by 2010 and an 85-percent reduction by 2020 from the 2000 baseline. Diesel engines emit a complex mixture of air pollutants, composed of gaseous and solid material. The visible emissions in diesel exhaust are known as particulate matter or PM, which includes carbon particles or "soot." Diesel exhaust also contains a variety of harmful gases and over 40 other cancer-causing substances. California's identification of DPM as a TAC was based on its potential to cause cancer, premature deaths, and other health problems. Exposure to DPM is a health hazard, particularly to children whose lungs are still developing and the elderly who may have other serious health problems. Overall, diesel engine emissions are responsible for the majority of California's potential airborne cancer risk from combustion sources.

Asbestos

Asbestos is listed as a TAC by CARB and as a HAP by the EPA. Asbestos occurs naturally in mineral formations and crushing or breaking these rocks, through construction or other means, can release asbestiform fibers into the air. Asbestos emissions can result from the sale or use of asbestos-containing materials, road surfacing with such materials, grading activities, and surface mining. The risk of disease is dependent upon the intensity and duration of exposure. When inhaled, asbestos fibers may remain in the lungs and with time may be linked to such diseases as asbestosis, lung cancer, and mesothelioma. The nearest likely locations of naturally occurring asbestos, as identified in the *General Location Guide for Ultramafic Rocks in California*, prepared by the California Division of Mines and Geology, is located in Santa Barbara County. The nearest historic asbestos mine to the project site, as identified in the *Reported Historic Asbestos Mines, Historic Asbestos Prospects, and Other Natural Occurrences of Asbestos in California*, prepared by U.S. Geological Survey, is located at Asbestos Mountain, which is approximately 80 miles east of the project site in the San Jacinto Mountains. Due to the distance to the nearest natural occurrences of asbestos, the project site is not likely to contain asbestos.

Formaldehyde from Composite Wood Products

Many composite wood products used in building materials and furnishings commonly found in offices, warehouses, residences, and hotels contain formaldehyde-based glues which off-gas formaldehyde after installation. Formaldehyde is listed as a TAC by CARB and as a HAP by the EPA. The primary source of formaldehyde indoors is composite wood products manufactured with urea-formaldehyde resins, such as plywood, medium density fiberboard, and particleboard. These materials are commonly used in building construction for flooring, cabinetry, baseboards, window shades, interior doors, and window and door trims. All new building products sold in California are required to meet both California Phase 2 formaldehyde compliant standards and the U.S. EPA TSCA Title VI formaldehyde regulations. In addition, Title 24 regulation require all new structures built in California to install forced air HVAC systems that are equipped with high efficiency MERV 13 air filters that will reduce the formaldehyde concentrations by an additional 15 to 52 percent over traditional air filters. For these reasons, the employees are not anticipated to be negatively impacted by formaldehyde from composite wood products.

3.0 GREENHOUSE GASES

3.1 Greenhouse Gases

Constituent gases of the Earth's atmosphere, called atmospheric GHGs, play a critical role in the Earth's radiation amount by trapping infrared radiation from the Earth's surface, which otherwise would have escaped to space. Prominent GHGs contributing to this process include carbon dioxide (CO₂), methane, ozone, water vapor, nitrous oxide (N₂O), and chlorofluorocarbons (CFCs). This phenomenon, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. Anthropogenic (caused or produced by humans) emissions of these GHGs in excess of natural ambient concentrations are responsible for the enhancement of the Greenhouse Effect and have led to a trend of unnatural warming of the Earth's natural climate, known as global warming or climate change. Emissions of gases that induce global warming are attributable to human activities associated with industrial/manufacturing, agriculture, utilities, transportation, and residential land uses. Emissions of CO₂ and N₂O are byproducts of fossil fuel combustion. Methane, a potent greenhouse gas, results from off-gassing associated with agricultural practices and landfills. Sinks of CO₂, where CO₂ is stored outside of the atmosphere, include uptake by vegetation and dissolution into the ocean. The following provides a description of each of the GHGs and their global warming potential.

Water Vapor

Water vapor is the most abundant, important, and variable GHG in the atmosphere. Water vapor is not considered a pollutant; in the atmosphere it maintains a climate necessary for life. Changes in its concentration are primarily considered a result of climate feedbacks related to the warming of the atmosphere rather than a direct result of industrialization. The feedback loop in which water is involved is critically important to projecting future climate change. As the temperature of the atmosphere rises, more water is evaporated from ground storage (rivers, oceans, reservoirs, soil). Because the air is warmer, the relative humidity can be higher (in essence, the air is able to "hold" more water when it is warmer), leading to more water vapor in the atmosphere. As a GHG, the higher concentration of water vapor is then able to absorb more thermal indirect energy radiated from the Earth, thus further warming the atmosphere. The warmer atmosphere can then hold more water vapor and so on and so on. This is referred to as a "positive feedback loop." The extent to which this positive feedback loop will continue is unknown as there is also dynamics that put the positive feedback loop in check. As an example, when water vapor increases in the atmosphere, more of it will eventually also condense into clouds, which are more able to reflect incoming solar radiation (thus allowing less energy to reach the Earth's surface and heat it up).

Carbon Dioxide

The natural production and absorption of CO₂ is achieved through the terrestrial biosphere and the ocean. However, humankind has altered the natural carbon cycle by burning coal, oil, natural gas, and wood. Since the industrial revolution began in the mid 1700s, each of these activities has increased in scale and distribution. CO₂ was the first GHG demonstrated to be increasing in atmospheric concentration with the first conclusive measurements being made in the last half of the 20th century. Prior to the industrial revolution, concentrations were fairly stable at 280 parts per million (ppm). The International Panel on Climate Change (IPCC) indicates that concentrations were 379 ppm in 2005, an increase of more than 30 percent. Left unchecked, the IPCC projects that concentration of CO₂ in the atmosphere is projected to increase to a minimum of 540 ppm by 2100 as a direct result of anthropogenic sources. This could result in an average global temperature rise of at least two degrees Celsius or 3.6 degrees Fahrenheit.

Methane

Methane is an extremely effective absorber of radiation, although its atmospheric concentration is less than that of CO₂. Its lifetime in the atmosphere is brief (10 to 12 years), compared to some other GHGs (such as CO₂, N₂O, and CFCs). CH₄ has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of methane. Other anthropogenic sources include fossil-fuel combustion and biomass burning.

Nitrous Oxide

Concentrations of N₂O also began to rise at the beginning of the industrial revolution. In 1998, the global concentration of this GHG was documented at 314 parts per billion (ppb). N₂O is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. N₂O is also commonly used as an aerosol spray propellant (i.e., in whipped cream bottles, in potato chip bags to keep chips fresh, and in rocket engines and race cars).

Chlorofluorocarbons

CFCs are gases formed synthetically by replacing all hydrogen atoms in methane or ethane with chlorine and/or fluorine atoms. CFCs are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the Earth's surface). CFCs have no natural source, but were first synthesized in 1928. They were used for refrigerants, aerosol propellants, and cleaning solvents. Due to the discovery that they are able to destroy stratospheric ozone, a global effort to halt their production was undertaken and in 1989 the European Community agreed to ban CFCs by 2000 and subsequent treaties banned CFCs worldwide by 2010. This effort was extremely successful, and the levels of the major CFCs are now remaining level or declining. However, their long atmospheric lifetimes mean that some of the CFCs will remain in the atmosphere for over 100 years.

Hydrofluorocarbons

Hydrofluorocarbons (HFCs) are synthetic man-made chemicals that are used as a substitute for CFCs. Out of all the GHGs, they are one of three groups with the highest global warming potential. The HFCs with the largest measured atmospheric abundances are (in order), HFC-23 (CHF₃), HFC-134a (CF₃CH₂F), and HFC-152a (CH₃CHF₂). Prior to 1990, the only significant emissions were HFC-23. HFC-134a use is increasing due to its use as a refrigerant. Concentrations of HFC-23 and HFC-134a in the atmosphere are now about 10 parts per trillion (ppt) each. Concentrations of HFC-152a are about 1 ppt. HFCs are manmade for applications such as automobile air conditioners and refrigerants.

Perfluorocarbons

Perfluorocarbons (PFCs) have stable molecular structures and do not break down through the chemical processes in the lower atmosphere. High-energy ultraviolet rays about 60 kilometers above Earth's surface are able to destroy the compounds. Because of this, PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane (CF₄) and hexafluoroethane (C₂F₆). Concentrations of CF₄ in the atmosphere are over 70 ppt. The two main sources of PFCs are primary aluminum production and semiconductor manufacturing.

Sulfur Hexafluoride

Sulfur Hexafluoride (SF₆) is an inorganic, odorless, colorless, nontoxic, nonflammable gas. SF₆ has the highest global warming potential of any gas evaluated; 23,900 times that of CO₂. Concentrations in the 1990s were about 4 ppt. Sulfur hexafluoride is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

Aerosols

Aerosols are particles emitted into the air through burning biomass (plant material) and fossil fuels. Aerosols can warm the atmosphere by absorbing and emitting heat and can cool the atmosphere by reflecting light. Cloud formation can also be affected by aerosols. Sulfate aerosols are emitted when fuel containing sulfur is burned. Black carbon (or soot) is emitted during biomass burning due to the incomplete combustion of fossil fuels. Particulate matter regulation has been lowering aerosol concentrations in the United States; however, global concentrations are likely increasing.

3.2 Global Warming Potential

GHGs have varying global warming potential (GWP). The GWP is the potential of a gas or aerosol to trap heat in the atmosphere; it is the cumulative radiative forcing effects of a gas over a specified time horizon resulting from the emission of a unit mass of gas relative to CO₂. The GHGs listed by the IPCC and the CEQA Guidelines are discussed in this section in order of abundance in the atmosphere. Water vapor, the most abundant GHG, is not included in this list because its natural concentrations and fluctuations far outweigh its anthropogenic (human-made) sources. To simplify reporting and analysis, GHGs are commonly defined in terms of their GWP. The IPCC defines the GWP of various GHG emissions on a normalized scale that recasts all GHG emissions in terms of CO₂ equivalent (CO₂e). As such, the GWP of CO₂ is equal to 1. The GWP values used in this analysis are based on the 2007 IPCC Fourth Assessment Report, which are used in the CalEEMod Model Version 2022.1 and are detailed in Table A. The IPCC has updated the GWP of some gases in their Sixth Assessment Report, however the new values have not yet been incorporated into the CalEEMod model that has been utilized in this analysis.

Table A – Global Warming Potentials, Atmospheric Lifetimes and Abundances of GHGs

Gas	Atmospheric Lifetime (years) ¹	Global Warming Potential (100 Year Horizon) ²	Atmospheric Abundance
Carbon Dioxide (CO ₂)	50-200	1	379 ppm
Methane (CH ₄)	9-15	25	1,774 ppb
Nitrous Oxide (N ₂ O)	114	298	319 ppb
HFC-23	270	14,800	18 ppt
HFC-134a	14	1,430	35 ppt
HFC-152a	1.4	124	3.9 ppt
PFC: Tetrafluoromethane (CF ₄)	50,000	7,390	74 ppt
PFC: Hexafluoroethane (C ₂ F ₆)	10,000	12,200	2.9 ppt
Sulfur Hexafluoride (SF ₆)	3,200	22,800	5.6 ppt

¹ Defined as the half-life of the gas.

² Compared to the same quantity of CO₂ emissions and is based on the Intergovernmental Panel On Climate Change (IPCC) 2007 standard, which is utilized in CalEEMod (Version 2022.1), that is used in this report (CalEEMod user guide: Appendix A).

Definitions: ppm = parts per million; ppb = parts per billion; ppt = parts per trillion

Source: IPCC 2007, EPA 2015

3.3 Greenhouse Gas Emissions Inventory

According to the Carbon Dioxide Information Analysis Center¹, 9,855 million metric tons of carbon dioxide equivalent (MMTCO₂e) emissions were created globally in the year 2014. According to the EPA, the breakdown of global GHG emissions by sector consists of: 25 percent from electricity and heat production; 21 percent from industry; 24 percent from agriculture, forestry and other land use activities; 14 percent from transportation; 6 percent from building energy use; and 10 percent from all other sources of energy use².

According to *Inventory of U.S. Greenhouse Gas Emissions and Sinks 1990-2022*, prepared by EPA, April 2024, total U.S. GHG emissions in 2022 were 6,343.2 million metric tons (MMT) of CO₂e emissions. Total U.S. emissions have decreased by 3.0 percent between 1990 and 2022, which is down from a high of 15.2 percent above 1990 levels in 2007. Emissions increased from 2021 to 2022 by 0.2 percent. The increase in total GHG emissions was driven largely in an increase in CO₂ emissions from fossil fuel combustion.

According to *California Greenhouse Gas Emissions for 2000 to 2022 Trends of Emissions and Other Indicators*, prepared by the CARB, September 20, 2024, the State of California created 371.1 MMTCO₂e in 2022. The 2022 emissions were 9.3 MMTCO₂e lower than in 2021. The 2022 emissions data shows the State is continuing its established long-term trend of GHG emissions declines, despite the anomalous emissions trends from 2019 through 2021, due in large part to the impacts of the COVID-19 pandemic. The transportation sector showed the largest decrease in emissions of 5.2 MMTCO₂e compared to 2021.

4.0 AIR QUALITY MANAGEMENT

The air quality at the project site is addressed through the efforts of various federal, state, regional, and local government agencies. These agencies work jointly, as well as individually, to improve air quality through legislation, regulations, planning, policy-making, education, and a variety of programs. The agencies responsible for improving the air quality are discussed below.

4.1 Federal – United States Environmental Protection Agency

The Clean Air Act, first passed in 1963 with major amendments in 1970, 1977 and 1990, is the overarching legislation covering regulation of air pollution in the United States. The Clean Air Act has established the mandate for requiring regulation of both mobile and stationary sources of air pollution at the state and federal level. The EPA was created in 1970 in order to consolidate research, monitoring, standard-setting and enforcement authority into a single agency.

The EPA is responsible for setting and enforcing the National Ambient Air Quality Standards (NAAQS) for atmospheric pollutants. It regulates emission sources that are under the exclusive authority of the federal government, such as aircraft, ships, and certain locomotives. NAAQS pollutants were identified using medical evidence and are shown below in Table B.

Table B – State and Federal Criteria Pollutant Standards

Air Pollutant	Concentration / Averaging Time		Most Relevant Effects
	California Standards	Federal Primary Standards	
Ozone (O ₃)	0.09 ppm / 1-hour 0.07 ppm / 8-hour	0.070 ppm, / 8-hour	a) Pulmonary function decrements and localized lung injury in humans and animals; (b) asthma exacerbation; (c) chronic obstructive pulmonary disease (COPD) exacerbation; (d) respiratory infection; (e) increased school absences, and hospital admissions and emergency department (ED) visits for combined respiratory diseases; (e) increased mortality; (f) possible metabolic effects. Vegetation damage; property damage
Carbon Monoxide (CO)	20.0 ppm / 1-hour 9.0 ppm / 8-hour	35.0 ppm / 1-hour 9.0 ppm / 8-hour	Visibility reduction (a) Aggravation of angina pectoris and other aspects of coronary heart disease; (b) decreased exercise tolerance in persons with peripheral vascular disease and lung disease; (c) possible impairment of central nervous system functions; (d) possible increased risk to fetuses; (f) possible increased risk of pulmonary disease; (g) possible emergency department visits for respiratory diseases overall and visits for asthma.
Nitrogen Dioxide (NO ₂)	0.18 ppm / 1-hour 0.030 ppm / annual	100 ppb / 1-hour 0.053 ppm / annual	Short-term (a) asthma exacerbations (“asthma attacks”) Long-term (a) asthma development; (b) higher risk of all-cause, cardiovascular, and respiratory mortality. Both short and long term NO ₂ exposure is also associated with chronic obstructive pulmonary disease (COPD) risk. Potential impacts on cardiovascular health, mortality and cancer, aggravate chronic respiratory disease. Contribution to atmospheric discoloration

Air Pollutant	Concentration / Averaging Time		Most Relevant Effects
	California Standards	Federal Primary Standards	
Sulfur Dioxide (SO ₂)	0.25 ppm / 1-hour 0.04 ppm / 24-hour	75 ppb / 1-hour	Respiratory symptoms (bronchoconstriction, possible wheezing or shortness of breath) during exercise or physical activity in persons with asthma. Possible allergic sensitization, airway inflammation, asthma development.
Respirable Particulate Matter (PM ₁₀)	50 µg/m ³ / 24-hour 20 µg/m ³ / annual	150 µg/m ³ / 24-hour	Short -term (a) increase in mortality rates; (b) increase in respiratory infections; (c) increase in number and severity of asthma attacks; (d) COPD exacerbation; (e) increase in combined respiratory-diseases and number of hospital admissions; (f) increased mortality due to cardiovascular or respiratory diseases; (g) increase in hospital admissions for acute respiratory conditions; (h) increase in school absences; (i) increase in lost work days; (j) decrease in respiratory function in children; (k) increase medication use in children and adults with asthma.
Suspended Particulate Matter (PM _{2.5})	12 µg/m ³ / annual	35 µg/m ³ / 24-hour 12 µg/m ³ / annual	Long-term (a) reduced lung function growth in children; (b) changes in lung development; (c) development of asthma in children; (d) increased risk of cardiovascular diseases; (e) increased total mortality from lung cancer; (f) increased risk of premature death. Possible link to metabolic, nervous system, and reproductive and developmental effects for short-term and long-term exposure to PM2.5.
Sulfates	25 µg/m ³ / 24-hour	No Federal Standards	(a) Decrease in lung function; (b) aggravation of asthmatic symptoms; (c) vegetation damage; (d) Degradation of visibility; (e) property damage
Lead	1.5 µg/m ³ / 30-day	0.15 µg/m ³ / 3-month rolling	(a) Learning disabilities; (b) impairment of blood formation and nerve function; (c) cardiovascular effects, including coronary heart disease and hypertension Possible male reproductive system effects
Hydrogen Sulfide	0.03 ppm / 1-hour	No Federal Standards	Exposure to lower ambient concentrations above the standard may result in objectionable odor and may be accompanied by symptoms such as headaches, nausea, dizziness, nasal irritation, cough, and shortness of breath

Source: 2022 AQMP, SCAQMD, 2022.

As part of its enforcement responsibilities, the EPA requires each state with federal nonattainment areas to prepare and submit a State Implementation Plan (SIP) that demonstrates the means to attain the national standards. The SIP must integrate federal, state, and local components and regulations to identify specific measures to reduce pollution, using a combination of performance standards and market-based programs within the timeframe identified in the SIP. The CARB defines attainment as the category given to an area with no violations in the past three years. As indicated below in Table C, the Air Basin has been designated by EPA for the national standards as a non-attainment area for ozone and PM2.5 and partial non-attainment for lead. Currently, the Air Basin is in attainment with the national ambient air quality standards for CO, PM10, SO₂, and NO₂.

Table C – National Air Quality Standards Attainment Status – South Coast Air Basin

Criteria Pollutant	Averaging Time	Designation ^a	Attainment Date ^b
Ozone	1979 1-Hour (0.12 ppm)	Nonattainment (Extreme)	2/6/2023 (revised deadline)
	2015 8-Hour (0.07 ppm) ^d	Nonattainment (Extreme)	8/3/2038
	2008 8-Hour (0.075 ppm) ^d	Nonattainment (Extreme)	7/20/2032
	1997 8-Hour (0.08 ppm) ^d	Nonattainment (Extreme)	6/15/2024
PM2.5 ^e	2006 24-Hour (35 µg/m ³)	Nonattainment (Serious)	12/31/2019
	2012 Annual (12 µg/m ³)	Nonattainment (Serious)	12/31/2021
	1997 Annual (15 µg/m ³)	Attainment (final determination pending)	4/5/2015 (attained 2013)
PM10 ^f	1987 24-Hour (150 µg/m ³)	Attainment (Maintenance)	7/26/2013 (attained)
Lead ^g	2008 3-Months Rolling (0.15 µg/m ³)	Nonattainment (Partial) (Attainment determination requested)	12/31/2015
CO	1971 1-Hour (35 ppm)	Attainment (Maintenance)	6/11/2007
	1971 8-Hour (9 ppm)	Attainment (Maintenance)	6/11/2007
NO ₂ ^h	2010 1-Hour (100 ppb)	Unclassifiable/Attainment	N/A (attained)
	1971 Annual (0.053 ppm)	Attainment (Maintenance)	9/22/1998 (attained)
SO ₂ ⁱ	2010 1-Hour (75 ppb)	Unclassifiable/Attainment	1/9/2018
	1971 24-Hour (0.14 ppm)	Unclassifiable/Attainment	3/19/1979

Source: SCAQMD, 2022

Notes:

a) U.S. EPA often only declares Nonattainment areas; everywhere else is listed as Unclassifiable/Attainment or Unclassifiable.

b) A design value below the NAAQS for data through the full year or smog season prior to the attainment date is typically required for attainment demonstration.

c) The 1979 1-hour ozone NAAQS (0.12 ppm) was revoked, effective June 15, 2005; however, the Basin has not attained this standard and therefore has some continuing obligations with respect to the revoked standard; original attainment date was 11/15/2010; the revised attainment date is 2/6/2023.

d) The 2008 8-hour ozone NAAQS (0.075 ppm) was revised to 0.070 ppm, effective 12/28/2015 with classifications and implementation goals to be finalized by 10/1/2017; the 1997 8-hour ozone NAAQS (0.08 ppm) was revoked in the 2008 ozone implementation rule, effective 4/6/2015; there are continuing obligations under the revoked 1997 and revised 2008 ozone NAAQS until they are attained.

e) The attainment deadline for the 2006 24-Hour PM2.5 NAAQS was 12/31/15 for the former “moderate” classification; the EPA approved reclassification to “serious”, effective 2/12/16 with an attainment deadline of 12/31/2019; the 2012 (proposal year) annual PM2.5 NAAQS was revised on 1/15/2013, effective 3/18/2013, from 15 to 12 µg/m³; new annual designations were final 1/15/2015, effective 4/15/2015; on 7/25/2016 the EPA finalized a determination that the Basin attained the 1997 annual (15.0 µg/m³) and 24-hour PM2.5 (65 µg/m³) NAAQS, effective 8/24/2016.

f) The annual PM10 standard was revoked, effective 12/18/2006; the 24-hour PM10 NAAQS deadline was 12/31/2006; the Basin’s Attainment Re-designation Request and PM10 Maintenance Plan was approved by the EPA on 6/26/2103, effective 7/26/2013.

g) Partial Nonattainment designation – Los Angeles County portion of the Basin only for near-source monitors; expect to remain in attainment based on current monitoring data; attainment re-designation request pending.

h) New 1-hour NO₂ NAAQS became effective 8/2/2010, with attainment designations 1/20/2012; annual NO₂ NAAQS retained.

i) The 1971 annual and 24-hour SO₂ NAAQS were revoked, effective 8/23/2010.

Despite substantial improvements in air quality over the past few decades, some air monitoring stations in the Air Basin still exceed the NAAQS and frequently record the highest ozone levels in the United States. In 2020, monitoring stations in the Air Basin exceeded the most current federal standards on a total of 181 days (49 percent of the year), including: 8-hour ozone (157 days over the 2015 ozone NAAQS), 24-hour PM2.5 (39 days), PM10 (3 days), and NO₂ (1 day). Nine of the top 10 stations in the nation most frequently exceeding the 2015 8-hour ozone NAAQS in 2020 were located within the Air Basin, including stations in San Bernardino, Riverside, and Los Angeles Counties (SCAQMD, 2022).

PM2.5 levels in the Air Basin have improved significantly in recent years. Since 2015, none of the monitoring stations in the Air Basin have recorded violations of the former 1997 annual PM2.5 NAAQS (15.0 µg/m³). On July 25, 2016 the U.S. EPA finalized a determination that the Air Basin attained the 1997 annual (15.0 µg/m³) and 24-hour PM2.5 (65 µg/m³) NAAQS, effective August 24, 2016. However, the Air Basin does not meet the 2012 annual PM2.5 NAAQS (12.0 µg/m³), with six monitoring stations having design values above the standard for the 2018-2020 period (SCAQMD, 2022).

4.2 State – California Air Resources Board

The CARB, which is a part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California. In this capacity, the CARB conducts research, sets the California Ambient Air Quality Standards (CAAQS), compiles emission inventories, develops suggested control measures, provides oversight of local programs, and prepares the SIP. The CAAQS for criteria pollutants in the Air Basin are shown in Table D. In addition, the CARB establishes emission standards for motor vehicles sold in California, consumer products (e.g. hairspray, aerosol paints, and barbeque lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

Table D – California Ambient Air Quality Standards Attainment Status – South Coast Air Basin

Criteria Pollutant	Averaging Time	Level ^a	Designation ^b
Ozone	1-Hour	0.09 ppm	Nonattainment
	8-Hour	0.070 ppm	Nonattainment
PM2.5	Annual	12 µg/m³	Nonattainment
PM10	24-Hour	50 µg/m³	Nonattainment
	Annual	20 µg/m³	Nonattainment
Lead	30-Day Average	1.5 µg/m³	Attainment
CO	1-Hour	20 ppm	Attainment
	8-Hour	9.0 ppm	Attainment
NO ₂	1-Hour	0.18 ppm	Attainment
	Annual	0.030	Attainment ^c
SO ₂	1-Hour	0.25 ppm	Attainment
	24-Hour	0.04 ppm	Attainment
Sulfates	24-Hour	25 µg/m³	Attainment
Hydrogen Sulfide ^c	1-Hour	0.03 ppm	Unclassified

Source: SCAQMD, 2022

Notes:

a) CA State standards, or CAAQS, for ozone, SO₂, NO₂, PM10 and PM2.5 are values not to be exceeded; lead, sulfates and H₂S standards are values not to be equaled or exceeded; CAAQS are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

b) CA State designations shown were updated by CARB in 2019, based on the 2016-2018 3-year period; stated designations are based on a 3-year data period after consideration of outliers and exceptional events.

c) The CA-60 near road portion of San Bernardino, Riverside and Los Angeles Counties has recently been redesignated as an attainment area based on data collected between 2018 and 2020.

As shown in Table D, the Air Basin has been designated by the CARB as a non-attainment area for ozone, PM10 and PM2.5. Currently, the Air Basin is in attainment with the ambient air quality standards for lead, CO, NO₂, SO₂ and sulfates, and is unclassified for Hydrogen Sulfide.

The following lists the State of California Code of Regulations (CCR) air quality emission rules that are applicable, but not limited to school projects in the State.

Assembly Bill 2588

The Air Toxics “Hot Spots” Information and Assessment Act (Assembly Bill [AB] 2588, 1987, Connelly) was enacted in 1987 as a means to establish a formal air toxics emission inventory risk quantification program. AB 2588, as amended, establishes a process that requires stationary sources to report the type and quantities of certain substances their facilities routinely release in California. The data is ranked by high, intermediate, and low categories, which are determined by: the potency, toxicity, quantity, volume, and proximity of the facility to nearby receptors.

CARB Regulation for In-Use Off-Road Diesel Vehicles

On July 26, 2007, the CARB adopted CCR Title 13, Article 4.8, Chapter 9, Section 2449 to reduce DPM and NOx emissions from in-use off-road heavy-duty diesel vehicles in California. Such vehicles are used in construction, mining, and industrial operations. The regulation limits idling to no more than five consecutive minutes, requires reporting and labeling, and requires disclosure of the regulation upon vehicle sale. Performance requirements of the rule are based on a fleet’s average NOx emissions, which can be met by replacing older vehicles with newer, cleaner vehicles or by applying exhaust retrofits. The regulation was amended in 2010 to delay the original timeline of the performance requirement making the first compliance deadline January 1, 2014 for large fleets (over 5,000 horsepower), 2017 for medium fleets (2,501-5,000 horsepower), and 2019 for small fleets (2,500 horsepower or less). Currently, no commercial operation in California may add any equipment to their fleet that has a Tier 0, Tier 1, or Tier 2 engine. It should be noted that commercial fleets may continue to use their existing Tier 0, 1 and 2 equipment, if they can demonstrate that the average emissions from their entire fleet emissions meet the NOx emissions targets.

CARB Resolution 08-43 for On-Road Diesel Truck Fleets

On December 12, 2008 the CARB adopted Resolution 08-43, which limits NOx, PM10 and PM2.5 emissions from on-road diesel truck fleets that operate in California. On October 12, 2009 Executive Order R-09-010 was adopted that codified Resolution 08-43 into CCR Title 13, Section 2025. This regulation requires that by the year 2023 all commercial diesel trucks that operate in California shall meet model year 2010 (Tier 4 Final) or latter emission standards. This regulation also provides a few exemptions including a onetime per year 3-day pass for trucks registered outside of California. All on-road diesel trucks utilized during construction of the proposed project will be required to comply with Resolution 08-43.

4.3 Regional – Southern California

The SCAQMD is the agency principally responsible for comprehensive air pollution control in the South Coast Air Basin. To that end, as a regional agency, the SCAQMD works directly with the Southern California Association of Governments (SCAG), county transportation commissions, and local governments and cooperates actively with all federal and state agencies.

South Coast Air Quality Management District

SCAQMD develops rules and regulations, establishes permitting requirements for stationary sources, inspects emission sources, and enforces such measures through educational programs or fines, when necessary. SCAQMD is directly responsible for reducing emissions from stationary, mobile, and indirect sources. It has responded to this requirement by preparing a sequence of AQMPs. The *Final 2022 Air Quality Management Plan* (2022 AQMP) was adopted by CARB on January 26, 2023 and has been submitted to the U.S. EPA for final approval, which is anticipated to occur sometime this year. After the 2022 AQMP has been adopted by the U.S. EPA, the 2022 AQMP will be incorporated into the SIP. The

2022 AQMP establishes actions and strategies to reduce ozone levels to the U.S. EPA 2015 ozone standard of 70 ppb by 2037. The 2022 AQMP promotes extensive use of zero-emission technologies across all stationary and mobile sources coupled with rules and regulations, investment strategies, and incentives.

Although SCAQMD is responsible for regional air quality planning efforts, it does not have the authority to directly regulate air quality issues associated with plans and new development projects throughout the Air Basin. Instead, this is controlled through local jurisdictions in accordance with CEQA. In order to assist local jurisdictions with air quality compliance issues the *CEQA Air Quality Handbook* (SCAQMD CEQA Handbook), prepared by SCAQMD, 1993, with the most current updates found at <http://www.aqmd.gov/ceqa/hdbk.html>, was developed in accordance with the projections and programs detailed in the AQMPs. The purpose of the SCAQMD CEQA Handbook is to assist Lead Agencies, as well as consultants, project proponents, and other interested parties in evaluating a proposed project's potential air quality impacts. Specifically, the SCAQMD CEQA Handbook explains the procedures that SCAQMD recommends be followed for the environmental review process required by CEQA. The SCAQMD CEQA Handbook provides direction on how to evaluate potential air quality impacts, how to determine whether these impacts are significant, and how to mitigate these impacts. The SCAQMD intends that by providing this guidance, the air quality impacts of plans and development proposals will be analyzed accurately and consistently throughout the Air Basin, and adverse impacts will be minimized.

The following lists the SCAQMD rules that are applicable but not limited to school development projects in the Air Basin.

Rule 402 - Nuisance

Rule 402 prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other material which causes injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. Compliance with Rule 402 will reduce local air quality and odor impacts to nearby sensitive receptors.

Rule 403- Fugitive Dust

Rule 403 governs emissions of fugitive dust during construction activities and requires that no person shall cause or allow the emissions of fugitive dust such that dust remains visible in the atmosphere beyond the property line or the dust emission exceeds 20 percent opacity, if the dust is from the operation of a motorized vehicle. Compliance with this rule is achieved through application of standard Best Available Control Measures, which include but are not limited to the measures below. Compliance with these rules would reduce local air quality impacts to nearby sensitive receptors.

- Utilize either a pad of washed gravel 50 feet long, 100 feet of paved surface, a wheel shaker, or a wheel washing device to remove material from vehicle tires and undercarriages before leaving project site.
- Do not allow any track out of material to extend more than 25 feet onto a public roadway and remove all track out at the end of each workday.
- Water all exposed areas on active sites at least three times per day and pre-water all areas prior to clearing and soil moving activities.

-
- Apply nontoxic chemical stabilizers according to manufacturer specifications to all construction areas that will remain inactive for 10 days or longer.
 - Pre-water all material to be exported prior to loading, and either cover all loads or maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code Section 23114.
 - Replant all disturbed area as soon as practical.
 - Suspend all grading activities when wind speeds (including wind gusts) exceed 25 miles per hour.
 - Restrict traffic speeds on all unpaved roads to 15 miles per hour or less.

Rules 1108 and 1108.1 – Cutback and Emulsified Asphalt

Rules 1108 and 1108.1 govern the sale, use, and manufacturing of asphalt and limits the VOC content in asphalt. This rule regulates the VOC contents of asphalt used during construction as well as any on-going maintenance during operations. Therefore, all asphalt used during construction and operation of the proposed project must comply with SCAQMD Rules 1108 and 1108.1.

Rule 1113 – Architectural Coatings

Rule 1113 governs the sale, use, and manufacturing of architectural coatings and limits the VOC content in sealers, coatings, paints and solvents. This rule regulates the VOC contents of paints available during construction. Therefore, all paints and solvents used during construction and operation of the proposed project must comply with SCAQMD Rule 1113.

Rule 1143 – Paint Thinners

Rule 1143 governs the sale, use, and manufacturing of paint thinners and multi-purpose solvents that are used in thinning of coating materials, cleaning of coating application equipment, and other solvent cleaning operations. This rule regulates the VOC content of solvents used during construction. Solvents used during construction and operation of the proposed project must comply with SCAQMD Rule 1143.

Rule 1403 – Asbestos Removal

Rule 1403 governs asbestos emissions from demolition and renovation activities. The existing structures on the project site shall be surveyed for asbestos prior to demolition activities. If asbestos is found within the existing structures, the asbestos shall be removed through utilization of the removal procedures detailed in Rule 1403.

Southern California Association of Governments

The SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the southern California region and is the largest MPO in the nation. With respect to air quality planning, SCAG has prepared the *2024-2050 Regional Transportation Plan/Sustainable Communities Strategy* (Connect SoCal 2024), adopted by SCAG on April 4, 2024 which is based on the regional development and growth forecasts provided in the *2023 Federal Transportation Improvement Program* (2023 FTIP), adopted October 2022. In September 2024, SCAG adopted the *Final 2025 Federal Transportation Improvement Program* (2025 FTIP), that provides a comprehensive listing of projects that will receive federal funding and/or are regionally significant projects that are proposed over the Federal

Fiscal years of 2024/2025 through 2027/2028 as well as years 2028/2029 and 2029/2030 that have been included for informational purposes. The projects included in the 2025 FTIP are consistent with programs and projects and subsequent amendments contained in Connect SoCal 2024.

Although the Connect SoCal 2024 and 2025 FTIP are primarily planning documents for future transportation projects, a key component of these plans are to integrate land use planning with transportation planning that promotes higher density infill development in close proximity to existing transit service. These plans form the basis for the land use and transportation components of the 2022 AQMP, which are utilized in the preparation of air quality forecasts and in the consistency analysis included in the 2022 AQMP. The Connect SoCal 2024, 2025 FTIP, and 2022 AQMP are based on projections originating within the City and County General Plans.

4.4 Local Jurisdictions

Local jurisdictions, such as the City of Santa Ana and County of Orange, have the authority and responsibility to reduce air pollution through its police power and decision-making authority. Specifically, the City and County are responsible for the assessment and mitigation of air emissions resulting from its land use decisions. The City and County are also responsible for the implementation of transportation control measures as outlined in the AQMPs. Examples of such measures include bus turnouts, energy-efficient streetlights, and synchronized traffic signals. In accordance with CEQA requirements and the CEQA review process, the City and County assess the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation.

In accordance with the CEQA requirements, the City and County do not, however, have the expertise to develop plans, programs, procedures, and methodologies to ensure that air quality within the City and region will meet federal and state standards. Instead, the City and County rely on the expertise of the SCAQMD and utilizes the SCAQMD CEQA Handbook as the guidance document for the environmental review of plans and development proposals within its jurisdiction.

5.0 ENERGY CONSERVATION MANAGEMENT

The regulatory setting related to energy conservation is primarily addressed through State and local regulations, which are discussed below.

5.1 State

Energy conservation management in the State was initiated by the 1974 Warren-Alquist State Energy Resources Conservation and Development Act that created the California Energy Resource Conservation and Development Commission (currently named California Energy Commission [CEC]), which was originally tasked with certifying new electric generating plants based on the need for the plant and the suitability of the site of the plant. In 1976 the Warren-Alquist Act was expanded to include new restrictions on nuclear generating plants, that effectively resulted in a moratorium of any new nuclear generating plants in the State. The following details specific regulations adopted by the State in order to reduce the consumption of energy.

California Code of Regulations Title 20

On November 3, 1976 the CEC adopted the *Regulations for Appliance Efficiency Standards Relating to Refrigerators, Refrigerator-Freezers and Freezers and Air Conditioners*, which were the first energy-efficiency standards for appliances. The appliance efficiency regulations have been updated several times by the CEC and the most current version is the *2016 Appliance Efficiency Regulations*, adopted January 2017 which includes almost all types of appliances and lamps that use electricity, natural gas as well as plumbing fixtures. The authority for the CEC to control the energy-efficiency of appliances is detailed in CCR Title 20, Division 2, Chapter 4, Article 4, Sections 1601-1609.

California Code of Regulations Title 24, Part 6

The CEC is also responsible for implementing the CCR Title 24, Part 6: *California's Energy Efficiency Standards for Residential and Nonresidential Buildings* (Title 24 Part 6) that were first established in 1978 in response to a legislative mandate to reduce California's energy consumption. In 2008 the State set an energy-use reduction goal of zero-net-energy use of all new homes by 2020 and the CEC was mandated to meet this goal through revisions to the Title 24, Part 6 regulations.

The Title 24 standards are updated on a three-year schedule and since 2008 the standards have been incrementally moving to the 2020 goal of the zero-net-energy use. The 2022 Title 24 standards are the current standards that went into effect on January 1, 2023 and the 2025 Title 24 standards will go into effect on January 1, 2026.

According to the 2025 Title 24 Part 6 Fact Sheet, prepared by ACE Resources, some of the notable changes over the 2022 Title 24 standards for nonresidential buildings now include an energy budget requirement, HVAC programming requirements, new nonresidential pools will need to provide a solar thermal heating system that is a minimum 65% of the size of the pool, more efficient natural gas water heaters and HVAC systems and the HVAC systems now are required to provide variable air volume rates that is determined by occupancy and time of day, all buildings with public entrances that are greater than 10,000 sq ft are now required to include an enclosed vestibule with all doors equipped with self-closing devices (the vestibule can be created with either a second door or an air curtain), higher thermal requirements for relocatable school buildings, and laboratories are now subject to the energy code.

California Code of Regulations (CCR) Title 24, Part 11

CCR Title 24, Part 11: *California Green Building Standards* (CalGreen Code) was developed in response to continued efforts to reduce GHG emissions associated with energy consumption. The CalGreen Code is also updated every three years and the current version is the 2022 CalGreen Code that went into effect on January 1, 2023 and the 2025 CalGreen Code will go into effect on January 1, 2026.

The CalGreen Code contains requirements for construction site selection; storm water control during construction; construction waste reduction; indoor water use reduction; material selection; natural resource conservation; site irrigation conservation; and more. The code provides for design options allowing the designer to determine how best to achieve compliance for a given site or building condition. The code also requires building commissioning, which is a process for verifying that all building systems (e.g., heating and cooling equipment and lighting systems) are functioning at their maximum efficiency.

The CalGreen Code provides standards for bicycle parking, carpool/vanpool/electric vehicle spaces, light and glare reduction, grading and paving, energy efficient appliances, renewable energy, graywater systems, water efficient plumbing fixtures, recycling and recycled materials, pollutant controls (including moisture control and indoor air quality), acoustical controls, storm water management, building design, insulation, flooring, and framing, among others. Implementation of the CalGreen Code measures reduces energy consumption and vehicle trips and encourages the use of alternative-fuel vehicles, which reduces pollutant emissions.

Some of the notable changes in the 2022 CalGreen Code over the prior 2019 CalGreen Code for nonresidential development mandatory requirements include the repeal of designated parking spaces for clean air vehicles and an increase in the number of electric vehicle (EV) ready parking spaces. The 2022 CalGreen Code also added new requirements for installed Level 2 or direct-current fast charger EV charging stations for autos, EV charging readiness for loading docks, enhanced thermal insulation, and acoustical ceilings.

Senate Bill 1020

Senate Bill 1020 (SB 1020) was adopted September 16, 2022 and would speed up the timeline retail electricity is supplied by renewable energy sources over the prior adoption timelines provided in SB 100, SB 350, SB 1078, SB 107, and SB X1-2. SB 1020 requires that retail sales of electricity are from renewable energy resources and zero-carbon resources supply 90 percent by December 31, 2035, 95 percent by December 31, 2040, and 100 percent by December 31, 2045.

Executive Order N-79-20

The California Governor issued Executive Order N-79-20 on September 23, 2020 that requires all new passenger cars and trucks and commercial drayage trucks sold in California to be zero-emissions by the year 2035 and all medium- heavy-duty vehicles (commercial trucks) sold in the state to be zero-emission by 2045 for all operations where feasible. Executive Order N-79-20 also requires all off-road vehicles and equipment to transition to 100 percent zero-emission equipment, where feasible by 2035.

Executive Order B-48-18 and Assembly Bill 2127

The California Governor issued Executive Order B-48-18 on January 26, 2018 that orders all state entities to work with the private sector to put at least five million zero-emission vehicles on California roads by 2030 and to install 200 hydrogen fueling stations and 250,000 electric vehicle chargers by 2025. Currently there are approximately 350,000 electric vehicles operating in California, which represents approximately

1.5 percent of the 24 million vehicles total currently operating in California. Implementation of Executive Order B-48-18 would result in approximately 20 percent of all vehicles in California to be zero emission electric vehicles. Assembly Bill 2127 (AB 2127) was codified into statute on September 13, 2018 and requires that the CEC working with CARB prepare biannual assessments of the statewide electric vehicle charging infrastructure needed to support the levels of zero emission vehicle adoption required for the State to meet its goals of putting at least 5 million zero-emission vehicles on California roads by 2030.

Assembly Bill 1109

California Assembly Bill 1109 (AB 1109) was adopted October 2007, also known as the Lighting Efficiency and Toxics Reduction Act, prohibits the manufacturing of lights after January 1, 2010 that contain levels of hazardous substances prohibited by the European Union pursuant to the Restriction of Hazardous Substances Directive. AB 1109 also requires reductions in energy usage for lighting and is structured to reduce lighting electrical consumption by: (1) At least 50 percent reduction from 2007 levels for indoor residential lighting; and (2) At least 25 percent reduction from 2007 levels for indoor commercial and all outdoor lighting by 2018. AB 1109 would reduce GHG emissions through reducing the amount of electricity required to be generated by fossil fuels in California.

Assembly Bill 1493

California Assembly Bill 1493 (also known as the Pavley Bill, in reference to its author Fran Pavley) was enacted on July 22, 2002 and required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. In 2004, CARB approved the “Pavley I” regulations limiting the amount of GHGs that may be released from new passenger automobiles that are being phased in between model years 2009 through 2016. These regulations will reduce GHG emissions by 30 percent from 2002 levels by 2016. In June 2009, the EPA granted California the authority to implement GHG emission reduction standards for light duty vehicles, in September 2009, amendments to the Pavley I regulations were adopted by CARB and implementation of the “Pavley I” regulations started in 2009.

The second set of regulations “Pavley II” was developed in 2010, and is being phased in between model years 2017 through 2025 with the goal of reducing GHG emissions by 45 percent by the year 2020 as compared to the 2002 fleet. The Pavley II standards were developed by linking the GHG emissions and formerly separate toxic tailpipe emissions standards previously known as the “LEV III” (third stage of the Low Emission Vehicle standards) into a single regulatory framework. The new rules reduce emissions from gasoline-powered cars as well as promote zero-emissions auto technologies such as electricity and hydrogen, and through increasing the infrastructure for fueling hydrogen vehicles. In 2009, the U.S. EPA granted California the authority to implement the GHG standards for passenger cars, pickup trucks and sport utility vehicles and these GHG emissions standards are currently being implemented nationwide.

The EPA has performed a midterm evaluation of the longer-term standards for model years 2022-2025, and based on the findings of this midterm evaluation, the EPA proposed The Safer Affordable Fuel Efficient (SAFE) Vehicles Proposed Rule for Model Years 2021-2026 that amends the corporate average fuel economy (CAFE) and GHG emissions standards for light vehicles for model years 2021 through 2026. The SAFE Vehicles Rule were made effective on June 29, 2020. However, the CAFE standards are now being reevaluated on a new more lenient criteria that restricts California from setting its own standards (see Section 6.2, below for more details). As such, the ability of the State to enforce AB 1493 regulations in the future is unlikely.

5.2 Local Jurisdictions

City of Santa Ana

The *Santa Ana General Plan Conservation Element*, adopted April 2022, provides the following applicable energy-related goals and policies.

Goal CN-3: Energy Resources

Reduce consumption of and reliance on nonrenewable energy, and support the development and use of renewable energy sources

Policy CN-3.1 Interagency Coordination

Consult with regional agencies and utility companies to pursue energy efficiency goals and expand renewable energy strategies

Policy CN-3.2 Education Programs

Support education programs to provide information on energy conservation and alternatives to nonrenewable energy sources.

Policy CN-3.3 Development Patterns

Promote energy-efficient development patterns by clustering mixed use developments and compatible uses adjacent to public transportation.

Policy CN-3.4 Site Design

Encourage site planning and subdivision design that incorporates the use of renewable energy systems.

Policy CN-3.5 Landscaping

Promote and encourage the planting of native and diverse tree species to improve air quality, reduce heat island effect, reduce energy consumption, and contribute to carbon mitigation with special focus in environmental justice areas.

Policy CN-3.6 Life Cycle Costs

Encourage construction and building development practices that use renewable resources and life cycle costing in construction and operating decisions.

Policy CN-3.7 Energy Conservation Design and Construction

Incorporate energy conservation features in the design of new construction and rehabilitation projects.

Policy CN-3.8 Energy-Efficient Public Facilities

Promote and encourage efficient use of energy and the conservation of available resources in the design, construction, maintenance, and operation of public facilities, infrastructure, and equipment.

Policy CN-3.9 Energy Generation in Public Facilities

Encourage and support the generation, transmission, use, and storage of locally distributed renewable energy in order to promote energy independence, efficiency, and sustainability.

Policy CN-3.10 Energy Conservation in Public Facilities

Work with businesses and contractors that use energy-efficient practices in the provision of services and equipment for City construction projects.

Policy CN-3.11 Energy-Efficient Transportation Infrastructure

Continue to support public and private infrastructure for public transportation such as bus routes, rail lines, and the OC Streetcar.

County of Orange

The County of Orange General Plan, Chapter 6 Resources Element, September 13, 2005, provides an Energy Resources Component that details the following applicable goals and policies.

Goal 1

Maximize the conservation and wise use of energy resources in all residences, businesses, public institutions, and industries in Orange County.

Goal 2

Encourage the utilization of existing energy resources to their highest potential and the development of alternative energy sources consistent with sound energy conservation practices and techniques to meet the County's future energy demand.

Policy 1 – Land Use

To plan urban land uses with a balance of residential, industrial, commercial, and public land uses as set forth in the Land Use Element.

Policy 2 – Energy Resource Development

To encourage and actively support the efficient use and optimum development of energy resources in the County consistent with sound resource management practices.

Policy 3 – Energy Conservation

To encourage and actively support the utilization of energy conservation measures in all new and existing structures in the County.

Policy 4 – Transportation

To provide incentives for transportation system management programs and support regional public transportation programs that reduce energy consumption.

Policy 5 – Energy Financing

To examine the benefits of local government financing programs that promote energy conservation and development through cooperative public/private efforts.

Policy 6 – Alternative Energy Systems

To encourage the use of alternative energy systems and to the extent feasible, remove the regulatory barriers to their implementation.

Policy 7 – Solar Access

To support and encourage voluntary efforts to provide solar access opportunities in new developments.

6.0 GLOBAL CLIMATE CHANGE MANAGEMENT

The regulatory setting related to global climate change is addressed through the efforts of various international, federal, state, regional, and local government agencies. These agencies work jointly, as well as individually, to reduce GHG emissions through legislation, regulations, planning, policy-making, education, and a variety of programs. The agencies responsible for global climate change regulations are discussed below.

6.1 International

In 1988, the United Nations established the IPCC to evaluate the impacts of global climate change and to develop strategies that nations could implement to curtail global climate change. In 1992, the United States joined other countries around the world in signing the United Nations' Framework Convention on Climate Change (UNFCCC) agreement with the goal of controlling GHG emissions. The parties of the UNFCCC adopted the Kyoto Protocol, which set binding GHG reduction targets for 37 industrialized countries, the objective of reducing their collective GHG emissions by five percent below 1990 levels by 2012. The Kyoto Protocol has been ratified by 182 countries, but has not been ratified by the United States. It should be noted that Japan and Canada opted out of the Kyoto Protocol and the remaining developed countries that ratified the Kyoto Protocol have not met their Kyoto targets. The Kyoto Protocol expired in 2012 and the amendment for the second commitment period from 2013 to 2020 has not yet entered into legal force. The Parties to the Kyoto Protocol negotiated the Paris Agreement in December 2015, agreeing to set a goal of limiting global warming to less than 2 degrees Celsius compared with pre-industrial levels. The Paris Agreement has been adopted by 195 nations with 147 ratifying it, including the United States by President Obama, who ratified it by Executive Order on September 3, 2016. On June 1, 2017, President Trump announced that the United States is withdrawing from the Paris Agreement, on January 21, 2021 President Biden signed an executive order rejoining the Paris Agreement, and on January 20, 2025 President Trump signed an executive order withdrawing from the Paris Agreement.

Additionally, the Montreal Protocol was originally signed in 1987 and substantially amended in 1990 and 1992. The Montreal Protocol stipulates that the production and consumption of compounds that deplete ozone in the stratosphere—CFCs, halons, carbon tetrachloride, and methyl chloroform—were to be phased out, with the first three by the year 2000 and methyl chloroform by 2005.

6.2 Federal – United States Environmental Protection Agency

The EPA is responsible for implementing federal policy to address global climate change. The Federal government administers a wide array of public-private partnerships to reduce U.S. GHG intensity. These programs focus on energy efficiency, renewable energy, methane, and other non-CO₂ gases, agricultural practices and implementation of technologies to achieve GHG reductions. EPA implements several voluntary programs that substantially contribute to the reduction of GHG emissions.

In *Massachusetts v. Environmental Protection Agency* (Docket No. 05–1120), argued November 29, 2006 and decided April 2, 2007, the U.S. Supreme Court held that not only did the EPA have authority to regulate GHGs, but the EPA's reasons for not regulating this area did not fit the statutory requirements. As such, the U.S. Supreme Court ruled that the EPA should be required to regulate CO₂ and other GHGs as pollutants under the federal Clean Air Act (CAA).

In response to the Consolidations Appropriations Act, 2008 (H.R. 2764; Public Law 110-161), EPA proposed a rule on March 10, 2009 that requires mandatory reporting of GHG emissions from large sources in the United States. On September 22, 2009, the Final Mandatory Reporting of GHG Rule was signed and published in the Federal Register on October 30, 2009. The rule became effective on December 29, 2009. This rule requires suppliers of fossil fuels or industrial GHGs, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of GHG emissions to submit annual reports to the EPA.

On December 7, 2009, the EPA Administrator signed two distinct findings under section 202(a) of the Clean Air Act. One is an endangerment finding that finds concentrations of the six GHGs in the atmosphere threaten the public health and welfare of current and future generations. The other is a cause or contribute finding, that finds emissions from new motor vehicles and new motor vehicle engines contribute to the GHG pollution which threatens public health and welfare. These actions did not impose any requirements on industry or other entities, however, since 2009 the EPA has been providing GHG emission standards for vehicles and other stationary sources of GHG emissions that are regulated by the EPA. On September 13, 2013 the EPA Administrator signed 40 CFR Part 60, that limits emissions from new sources to 1,100 pounds of CO₂ per mega-watt hour (MWh) for fossil fuel-fired utility boilers and 1,000 pounds of CO₂ per MWh for large natural gas-fired combustion units.

On August 3, 2015, the EPA announced the Clean Power Plan, emissions guidelines for U.S. states to follow in developing plans to reduce GHG emissions from existing fossil fuel-fired power plants (Federal Register Vol. 80, No. 205, October 23 2015). On October 11, 2017, the EPA issued a formal proposal to repeal the Clean Power Plan and on June 19, 2019 the EPA replaced the Clean Power Plan with the Affordable Clean Energy rule that is anticipated to lower power sector GHG emissions by 11 million tons by the year 2030.

On June 6, 2025, in accordance with President Trump's "Unleashing American Energy" Executive Order and the Secretary of Transportation's "Fixing the CAFÉ Program" Memorandum, the National Highway Traffic Safety Administration (NHTSA), published the "Resetting the Corporate Average Fuel Economy Program"³, that requires the NHTSA to reconsider the Corporate Average Fuel Economy (CAFE) standards for passenger vehicles and non-passenger medium and heavy duty vehicles that now require several additional factors to be considered when setting fuel economy standards that include technological feasibility and economic practicability as well as considering fuel standards set by other agencies. In addition, the Memorandum prohibits consideration of trading credits between manufacturers. The Memorandum directs the NHTSA to replace the *Corporate Average Fuel Economy Standards for Model Years 2024-2026 Passenger Cars and Light Trucks* and the Model Years 2027 and Beyond Fuel Standards at the earliest opportunity.

6.3 State

The CARB has the primary responsible for implementing state policy to address global climate change, however there are State regulations related to global climate change that affect a variety of State agencies. CARB, which is a part of the CalEPA, is responsible for the coordination and administration of both the federal and state air pollution control programs within California. In this capacity, the CARB conducts research, sets CAAQS, compiles emission inventories, develops suggested control measures, provides oversight of local programs, and prepares the SIP. In addition, the CARB establishes emission standards for motor vehicles sold in California, consumer products (e.g. hairspray, aerosol paints, and

3 Obtained from: <https://www.nhtsa.gov/laws-regulations/corporate-average-fuel-economy>

barbeque lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

In 2008, CARB approved a Climate Change Scoping Plan that proposes a “comprehensive set of actions designed to reduce overall carbon GHG emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, create new jobs, and enhance public health” (CARB 2008). The Climate Change Scoping Plan has a range of GHG reduction actions which include direct regulations; alternative compliance mechanisms; monetary and non-monetary incentives; voluntary actions; market-based mechanisms such as a cap-and-trade system. In 2014, CARB approved the First Update to the Climate Change Scoping Plan (CARB, 2014) that identifies additional strategies moving beyond the 2020 targets to the year 2050. On December 14, 2017 CARB adopted the California’s 2017 Climate Change Scoping Plan, November 2017 (CARB, 2017) that provides specific statewide policies and measures to achieve the 2030 GHG reduction target of 40 percent below 1990 levels by 2030 and the aspirational 2050 GHG reduction target of 80 percent below 1990 levels by 2050. On December 15, 2022, CARB adopted the *2022 Scoping Plan for Achieving Carbon Neutrality*, November 16, 2022 (CARB, 2022) that lays out a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels no later than 2045, as directed by Assembly Bill 1279.

In addition to the Scoping Plans, the State has passed the following laws directing CARB to develop actions to reduce GHG emissions, which are listed below in chronological order, with the most current first.

Executive Order B-55-18 and Assembly Bill 1279

The California Governor issued Executive Order B-55-18 in September 2018 that establishes a new statewide goal to achieve carbon neutrality as soon as possible, but no later than 2045. This executive order directs the CARB to work with relevant State agencies to develop a framework for implementation and accounting that tracks progress toward this goal as well as ensuring future scoping plans identify and recommend measures to achieve this carbon neutrality goal. Assembly Bill 1279 was passed by the legislature in September 2022 that codifies the carbon neutrality targets provided in Executive Order B-55-18. The *2022 Scoping Plan for Achieving Carbon Neutrality*, adopted by CARB on December 16, 2022, was prepared in order to meet the carbon neutrality goal targets developed in Executive Order B-55-18 and codified in Assembly Bill 1279.

California Code of Regulations Title 24, Part 6

The Title 24 Part 6 standards have been developed by the CEC primarily for energy conservation and is described in more detail above in Section 5.1 under Energy Conservation Management. It should be noted that implementation of the Title 24 Part 6 building standards would also reduce GHG emissions, since energy use for residential and commercial buildings creates 9.7 percent of the GHG emissions in the State.

California Code of Regulations Title 24, Part 11

The CalGreen Building standards have been developed by the CEC primarily for energy conservation and is described in more detail above in Section 5.1 under Energy Conservation Management. It should be noted that implementation of the CalGreen Building standards would also reduce GHG emissions, since as detailed above under Title 23, Part 6, energy usage from buildings creates 9.7 percent of GHG emissions in the State.

Senate Bill 1020

SB 1020 requires that by December 1, 2045 that 100 percent of retail sales of electricity to be generated from renewable or zero-carbon emission sources of electricity and is described in more detail above in Section 5.1 under Energy Conservation Management.

Executive Order B-55-18 and Assembly Bill 1279

The California Governor issued Executive Order B-55-18 in September 2018 that establishes a new statewide goal to achieve carbon neutrality as soon as possible, but no later than 2045. This executive order directs CARB to work with relevant State agencies to develop a framework for implementation and accounting that tracks progress toward this goal as well as ensuring future scoping plans identify and recommend measures to achieve this carbon neutrality goal. Assembly Bill 1279 was passed by the legislature in September 2022 that codifies the carbon neutrality targets provided in Executive Order B-55-18. The *2022 Scoping Plan for Achieving Carbon Neutrality*, adopted by CARB on December 16, 2022, was prepared in order to meet the carbon neutrality goal targets developed in Executive Order B-55-18 and codified in Assembly Bill 1279.

Executive Order N-79-20

EO N-79-20 establish targets for when all new vehicles and equipment are zero-emission and is described in more detail above in Section 5.1 under Energy Conservation Management.

Executive Order B-48-18 and Assembly Bill 2127

Executive Order B-48-18 and AB 2127 provides measures to put at least five million zero-emission vehicles on California roads by 2030 and to install 200 hydrogen fueling stations and 250,000 electric vehicle chargers by 2025 and is described in more detail above in Section 5.1 under Energy Conservation Management.

Executive Order B-30-15, Senate Bill 32 and Assembly Bill 197

The California Governor issued Executive Order B-30-15 on April 29, 2015 that aims to reduce California's GHG emissions 40 percent below 1990 levels by 2030. This executive order aligns California's GHG reduction targets with those of other international governments, such as the European Union that set the same target for 2030 in October, 2014. This target will make it possible to reach the ultimate goal of reducing GHG emissions 80 percent under 1990 levels by 2050 that is based on scientifically established levels needed in the U.S.A to limit global warming below 2 degrees Celsius – the warming threshold at which scientists say there will likely be major climate disruptions such as super droughts and rising sea levels. Assembly Bill 197 (AB 197) (September 8, 2016) and Senate Bill 32 (SB 32) (September 8, 2016) codified into statute the GHG emissions reduction targets of at least 40 percent below 1990 levels by 2030 as detailed in Executive Order B-30-15. AB 197 also requires additional GHG emissions reporting that is broken down to sub-county levels and requires CARB to consider the social costs of emissions impacting disadvantaged communities.

Executive Order B-29-15

The California Governor issued Executive Order B-29-15 on April 1, 2015 and directed the State Water Resources Control Board to impose restrictions to achieve a statewide 25 percent reduction in urban water usage and directed the Department of Water Resources to replace 50 million square feet of lawn with drought tolerant landscaping through an update to the State's Model Water Efficient Landscape Ordinance. The Ordinance also requires installation of more efficient irrigation systems, promotion of

greywater usage and onsite stormwater capture, and limits the turf planted in new residential landscapes to 25 percent of the total area and restricts turf from being planted in median strips or in parkways unless the parkway is next to a parking strip and a flat surface is required to enter and exit vehicles. Executive Order B-29-15 would reduce GHG emissions associated with the energy used to transport and filter water.

Assembly Bill 341 and Senate Bills 939 and 1374

Senate Bill 939 (SB 939) requires that each jurisdiction in California to divert at least 50 percent of its waste away from landfills, whether through waste reduction, recycling or other means. Senate Bill 1374 (SB 1374) requires the California Integrated Waste Management Board to adopt a model ordinance by March 1, 2004 suitable for adoption by any local agency to require 50 to 75 percent diversion of construction and demolition of waste materials from landfills. Assembly Bill 341 (AB 341) was adopted in 2011 and builds upon the waste reduction measures of SB 939 and 1374, and sets a new target of a 75 percent reduction in solid waste generated by the year 2020.

Senate Bill 375

Senate Bill 375 (SB 375) was adopted September 2008 in order to support the State's climate action goals to reduce GHG emissions through coordinated regional transportation planning efforts, regional GHG emission reduction targets, and land use and housing allocation. SB 375 requires CARB to set regional targets for GHG emissions reductions from passenger vehicle use. In 2010, CARB established targets for 2020 and 2035 for each MPO within the State. It was up to each MPO to adopt a sustainable communities strategy (SCS) that will prescribe land use allocation in that MPOs Regional Transportation Plan (RTP) to meet CARB's 2020 and 2035 GHG emission reduction targets. These reduction targets are required to be updated every eight years and the most current targets are detailed at: <https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plan-targets>, which provides GHG emissions reduction targets for SCAG of 8 percent by 2020 and 19 percent by 2035.

The Connect SoCal 2024 provides a 2035 GHG emission reduction target of 19 percent reduction over the 2005 per capita emissions levels. The Connect SoCal 2024 include new initiatives of land use, transportation and technology to meet the 19 percent GHG emission reduction target for 2035. CARB is also charged with reviewing SCAG's RTP/SCS for consistency with its assigned targets.

City and County land use policies, including General Plans, are not required to be consistent with the RTP and associated SCS. However, new provisions of CEQA incentivize, through streamlining and other provisions, qualified projects that are consistent with an approved SCS and categorized as "transit priority projects."

Assembly Bill 1109

AB 1109 requires reductions in energy usage for lighting and is described in more detail above in Section 5.1 under Energy Conservation Management.

Senate Bill 97

Senate Bill 97 (SB 97) was adopted August 2007 and acknowledges that climate change is a prominent environmental issue that requires analysis under CEQA. SB 97 directed the Governor's Office of Planning and Research (OPR), which is part of the State Natural Resources Agency, to prepare, develop, and transmit to CARB guidelines for the feasible mitigation of GHG emissions or the effects of GHG emissions, as required by CEQA, by July 1, 2009. The Natural Resources Agency was required to certify and adopt those guidelines by January 1, 2010.

Pursuant to the requirements of SB 97 as stated above, on December 30, 2009 the Natural Resources Agency adopted amendments to the State CEQA guidelines that addresses GHG emissions. The CEQA Guidelines Amendments changed 14 sections of the CEQA Guidelines and incorporated GHG language throughout the Guidelines. However, no GHG emissions thresholds of significance were provided and no specific mitigation measures were identified. The GHG emission reduction amendments went into effect on March 18, 2010 and are summarized below:

- Climate Action Plans and other greenhouse gas reduction plans can be used to determine whether a project has significant impacts, based upon its compliance with the plan.
- Local governments are encouraged to quantify the GHG emissions of proposed projects, noting that they have the freedom to select the models and methodologies that best meet their needs and circumstances. The section also recommends consideration of several qualitative factors that may be used in the determination of significance, such as the extent to which the given project complies with state, regional, or local GHG reduction plans and policies. OPR does not set or dictate specific thresholds of significance. Consistent with existing CEQA Guidelines, OPR encourages local governments to develop and publish their own thresholds of significance for GHG impacts assessment.
- When creating their own thresholds of significance, local governments may consider the thresholds of significance adopted or recommended by other public agencies, or recommended by experts.
- New amendments include guidelines for determining methods to mitigate the effects of GHG emissions in Appendix F of the CEQA Guidelines.
- OPR is clear to state that “to qualify as mitigation, specific measures from an existing plan must be identified and incorporated into the project; general compliance with a plan, by itself, is not mitigation.”
- OPR’s emphasizes the advantages of analyzing GHG impacts on an institutional, programmatic level. OPR therefore approves tiering of environmental analyses and highlights some benefits of such an approach.
- Environmental impact reports must specifically consider a project's energy use and energy efficiency potential.

Assembly Bill 32

In 2006, the California State Legislature adopted AB 32, the California Global Warming Solutions Act of 2006. AB 32 requires CARB, to adopt rules and regulations that would achieve GHG emissions equivalent to statewide levels in 1990 by 2020 through an enforceable statewide emission cap which will be phased in starting in 2012. Emission reductions shall include carbon sequestration projects that would remove carbon from the atmosphere and utilize best management practices that are technologically feasible and cost effective.

In 2007 CARB released the calculated Year 1990 GHG emissions of 431 MMTCO₂e. The 2020 target of 431 MMTCO₂e requires the reduction of 78 MMTCO₂e, or approximately 16 percent from the State’s projected 2020 business as usual emissions of 509 MMTCO₂e (CARB, 2014). Under AB 32, CARB was required to adopt regulations by January 1, 2011 to achieve reductions in GHGs to meet the 1990 cap by 2020. Early measures CARB took to lower GHG emissions included requiring operators of the largest industrial facilities that emit 25,000 metric tons of CO₂ in a calendar year to submit verification of GHG emissions by

December 1, 2010. The CARB Board also approved nine discrete early action measures that include regulations affecting landfills, motor vehicle fuels, refrigerants in cars, port operations and other sources, all of which became enforceable on or before January 1, 2010.

Assembly Bill 1493

AB 1493 or the Pavley Bill sets tailpipe GHG emissions limits for passenger vehicles in California as well as fuel economy standards and is described in more detail above in Section 5.1 under Energy Conservation Management.

6.4 Regional – Southern California

The SCAQMD is the agency principally responsible for comprehensive air pollution control in the Air Basin. To that end, as a regional agency, the SCAQMD works directly with SCAG, county transportation commissions, and local governments and cooperates actively with all federal and state agencies.

South Coast Air Quality Management District

SCAQMD develops rules and regulations, establishes permitting requirements for stationary sources, inspects emission sources, and enforces such measures through educational programs or fines, when necessary. SCAQMD is directly responsible for reducing emissions from stationary, mobile, and indirect sources. The SCAQMD is also responsible for GHG emissions for projects where it is the lead agency. However, for other projects in the Air Basin where it is not the lead agency, it is limited to providing resources to other lead agencies in order to assist them in determining GHG emission thresholds and GHG reduction measures. In order to assist local agencies with direction on GHG emissions, the SCAQMD organized a working group, which is described below.

SCAQMD Working Group

Since neither CARB nor the OPR has developed GHG emissions threshold, the SCAQMD formed a Working Group to develop significance thresholds related to GHG emissions. At the September 28, 2010 Working Group meeting, the SCAQMD released its most current version of the draft GHG emissions thresholds, which recommends a tiered approach that either provides a quantitative annual thresholds of 3,500 MTCO₂e for residential uses, 1,400 MTCO₂e for commercial uses, and 3,000 MTCO₂e for mixed uses. An alternative annual threshold of 3,000 MTCO₂e for all land use types is also proposed.

Southern California Association of Governments

As detailed above in Section 4.3, the current applicable RTP/SCS for the project area region is the Connect SoCal 2024 and 2025 FTIP, which have been prepared to meet the GHG emissions reduction targets set by SB 375 for the SCAG region of 19 percent reduction over the 2005 per capita emissions levels. The Connect SoCal 2024 includes new land use, transportation, and technology strategies to meet the new 19 percent GHG emission reduction target for 2035.

Although the Connect SoCal 2024 and 2025 FTIP are primarily planning documents for future transportation projects, a key component of these plans are to integrate land use planning with transportation planning that promotes higher density infill development in close proximity to existing transit service. These plans form the basis for the land use and transportation components of the 2022 AQMP, which are utilized in the preparation of air quality forecasts and in the consistency analysis included in the 2022 AQMP. The Connect SoCal 2024, 2025 FTIP, and 2022 AQMP are based on projections originating within the City and County General Plans.

6.5 Local Jurisdictions

Local jurisdictions, such as the City and County, have the authority and responsibility to reduce GHG emissions through their police power and decision-making authority. Specifically, the City and County are responsible for the assessment and mitigation of GHG emissions resulting from its land use decisions. In accordance with CEQA requirements and the CEQA review process, the City and County assess the global climate change potential of new development projects, requires mitigation of potentially significant global climate change impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation.

7.0 ATMOSPHERIC SETTING

7.1 South Coast Air Basin

The project site is located within Orange County, which is part of the South Coast Air Basin (Air Basin) that includes the non-desert portions of Riverside, San Bernardino, and Los Angeles Counties and all of Orange County. The Air Basin is located on a coastal plain with connecting broad valleys and low hills to the east. Regionally, the Air Basin is bounded by the Pacific Ocean to the southwest and high mountains to the east forming the inland perimeter.

7.2 Local Climate

Orange County is located on a coastal plain with connecting broad valleys and low hills to the east. The general region lies in the semi-permanent high-pressure zone of the eastern Pacific. As a result, the climate is mild, tempered by cool sea breezes. Occasional periods of strong Santa Ana winds and winter storms interrupt the otherwise mild weather pattern.

Although the Air Basin has a semi-arid climate, the air near the surface is typically moist because of the presence of a shallow marine layer. Except for infrequent periods when dry air is brought into the Air Basin by offshore winds, the ocean effect is dominant. Periods of heavy fog are frequent and low stratus clouds, often referred to as “high fog” are a characteristic climate feature.

Winds are an important parameter in characterizing the air quality environment of a project site because they determine the regional pattern of air pollution transport and control the rate of dispersion near a source. Daytime winds in Orange County are usually light breezes from off the coast as air moves regionally onshore from the cool Pacific Ocean. These winds are usually the strongest in the dry summer months. Nighttime winds in Orange County are a result mainly from the drainage of cool air off of the mountains to the east and they occur more often during the winter months and are usually lighter than the daytime winds. Between the periods of dominant airflow, periods of air stagnation may occur, both in the morning and evening hours. Whether such a period of stagnation occurs is one of the critical determinants of air quality conditions on any given day.

During the winter and fall months, surface high-pressure systems north of the Air Basin combined with other meteorological conditions, can result in very strong winds, called “Santa Ana Winds”, from the northeast. These winds normally have durations of a few days before predominant meteorological conditions are reestablished. The highest wind speed typically occurs during the afternoon due to daytime thermal convection caused by surface heating. This convection brings about a downward transfer of momentum from stronger winds aloft. It is not uncommon to have sustained winds of 60 miles per hour with higher gusts during a Santa Ana Wind event.

The temperature and precipitation levels for the Santa Ana Fire Station, which is the nearest weather station to the project site with historical data is shown below in Table E. Table E shows that August is typically the warmest month and January is typically the coolest month. Rainfall in the project area varies considerably in both time and space. Almost all the annual rainfall comes from the fringes of mid-latitude storms from late November to early April, with summers being almost completely dry.

Table E – Monthly Climate Data

Month	Average Maximum Temperature (°F)	Average Minimum Temperature (°F)	Average Total Precipitation (inches)
January	68.1	43.1	2.73
February	68.9	44.9	3.05
March	70.7	46.7	2.21
April	73.1	50.0	1.05
May	75.2	54.0	0.25
June	78.6	57.4	0.06
July	83.5	60.9	0.02
August	84.7	61.6	0.06
September	83.9	59.3	0.22
October	79.4	54.5	0.49
November	74.2	47.5	1.28
December	68.8	43.6	2.28
Annual	75.8	52.0	13.69

7.3 Monitored Local Air Quality

The air quality at any site is dependent on the regional air quality and local pollutant sources. Regional air quality is determined by the release of pollutants throughout the Air Basin. Improvements in cleaner technology and strict regulations have reduced ozone levels since its peak in the mid-twentieth century. However, ozone levels have remained unacceptably high over the past decade despite significant reductions. This trend is due to the changes in climate and other weather conditions such as the increase in hot, stagnant days that can lead to the formation of ozone that we have experienced in recent years. (SCAQMD, 2022).

SCAQMD has divided the Air Basin into 38 air-monitoring areas with a designated ambient air monitoring station representative of each area. The project site is located in air monitoring area 17, which covers the central portion of Orange County. The nearest air monitoring station to the project site is the Anaheim-Pampas Lane Monitoring Station (Anaheim Station), which is located approximately 8.4 miles northwest of the project site at 1630 Pampas Lane, Anaheim. However, it should be noted that due to the air monitoring station's distance from the project site, recorded air pollution levels at the Anaheim Station reflect with varying degrees of accuracy, local air quality conditions at the project site. The monitoring data presented in Table F shows that ozone and particulate matter (PM10 and PM2.5) are the air pollutants of primary concern in the project area, which are detailed below:

Ozone

During the last three years, the State 1-hour concentration standard for ozone has been exceeded between zero and three days each year at the Anaheim Station. Both the State and federal 8-hour ozone standards have been exceeded between one and three days each year over the last three years at the Anaheim Station. Ozone is a secondary pollutant as it is not directly emitted. Ozone is the result of chemical reactions between other pollutants, most importantly hydrocarbons and NO₂, which occur only in the presence of bright sunlight. Pollutants emitted from upwind cities react during transport downwind to produce the oxidant concentrations experienced in the area. Many areas of Southern California

contribute to the ozone levels experienced at this monitoring station, with the more significant areas being those directly upwind.

Table F – Local Area Air Quality Monitoring Summary

Pollutant (Standard)	Year ¹		
	2022	2023	2024
Ozone:			
Maximum 1-Hour Concentration (ppm)	0.102	0.089	0.104
Days > CAAQS (0.09 ppm)	1	0	3
Maximum 8-Hour Concentration (ppm)	0.076	0.076	0.079
Days > NAAQS (0.070 ppm)	1	2	3
Days > CAAQS (0.070 ppm)	1	2	3
Nitrogen Dioxide:			
Maximum 1-Hour Concentration (ppb)	53.0	50.9	53.1
Days > NAAQS (100 ppb)	0	0	0
Days > CAAQS (180 ppb)	0	0	0
Inhalable Particulates (PM10):			
Maximum 24-Hour National Measurement (ug/m ³)	67.0	97.8	118.9
Days > NAAQS (150 ug/m ³)	0	0	0
Days > CAAQS (50 ug/m ³)	1	1	4
Annual Arithmetic Mean (AAM) (ug/m ³)	20.9	20.6	27.7
Annual > NAAQS (50 ug/m ³)	No	No	No
Annual > CAAQS (20 ug/m ³)	Yes	Yes	Yes
Ultra-Fine Particulates (PM2.5):			
Maximum 24-Hour National Measurement (ug/m ³)	33.1	45.6	49.7
Days > NAAQS (35 ug/m ³)	0	1	5
Annual Arithmetic Mean (AAM) (ug/m ³)	9.8	9.1	10.5
Annual > NAAQS and CAAQS (12 ug/m ³)	No	No	No

Notes: Exceedances are listed in **bold**. CAAQS = California Ambient Air Quality Standard; NAAQS = National Ambient Air Quality Standard; ppm = parts per million; ppb = parts per billion; ND = no data available.

¹ Data obtained from the Anaheim Station.

Source: <http://www.arb.ca.gov/adam/>

Nitrogen Dioxide

The Anaheim Station did not record an exceedance of either the Federal or State 1-hour NO₂ standards for the last three years.

Particulate Matter

The State 24-hour concentration standard for PM10 has been exceeded between one and four days each year over the past three years at the Anaheim Station. Over the past three years the Federal 24-hour standard for PM10 has not been exceeded at the Anaheim Station. The annual PM10 concentration at

the Anaheim Station has exceeded the State standard for the past three years and has not exceeded the Federal standard for the past three years.

The 24-hour concentration standard for PM_{2.5} has been exceeded between zero and five days each year over the past three years at the Anaheim Station. The annual PM_{2.5} concentrations at the Anaheim Station has not exceeded either the State or Federal standard for the past three years. Particulate levels in the area are due to natural sources, grading operations, and motor vehicles.

According to the EPA, some people are much more sensitive than others to breathing fine particles (PM₁₀ and PM_{2.5}). People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worsening illness and premature death due to breathing these fine particles. People with bronchitis can expect aggravated symptoms from breathing in fine particles. Children may experience decline in lung function due to breathing in PM₁₀ and PM_{2.5}. Other groups considered sensitive are smokers and people who cannot breathe well through their noses. Exercising athletes are also considered sensitive, because many breathe through their mouths during exercise.

7.4 Toxic Air Contaminant Levels

In order to determine the Air Basin-wide risks associated with major airborne carcinogens, the SCAQMD conducted the Multiple Air Toxics Exposure Study (MATES) studies. According to the MATES V study (SCAQMD, 2021), the project site has an estimated cancer risk of 465 per million persons chance of cancer. In comparison, the average cancer risk for the Air Basin is 455 per million persons. The MATES V study monitored air toxins between May 1, 2018 to April 30, 2019, found that cancer risk from air toxics has declined significantly in the Air Basin with a 40 percent decrease in cancer risk since the monitoring for the MATES IV study that occurred between July 1, 2012 and June 30, 2013 and an 84 percent decrease in cancer risk since the monitoring for the MATES II study that occurred between April 1, 1998 and March 31, 1999.

The MATES V study also analyzed impacts specific to the communities experiencing environmental injustices (EJ communities) that were evaluated using the Senate Bill 535 definition of disadvantaged communities, which found that between MATES IV and MATES V, the cancer risk from air toxics decreased by 57 percent in EJ communities overall, compared to a 53 percent reduction in non-EJ communities.

In order to provide a perspective of risk, it is often estimated that the incidence in cancer over a lifetime for the U.S. population ranges between 1 in 3 to 4 and 1 in 3, or a risk of about 300,000 per million persons. The MATES-III study referenced a Harvard Report on Cancer Prevention, which estimated that of cancers associated with known risk factors, about 30 percent were related to tobacco, about 30 percent were related to diet and obesity, and about 2 percent were associated with environmental pollution related exposures that includes hazardous air pollutants.

8.0 MODELING PARAMETERS AND ASSUMPTIONS

8.1 CalEEMod Model Input Parameters

The criteria air pollution and GHG emissions impacts created by the proposed project have been analyzed through use of the California Emissions Estimator Model (CalEEMod) Version 2022.1.1.30 CalEEMod is a computer model published by the California Air Pollution Control Officers Association (CAPCOA) for estimating air pollutant and GHG emissions. The CalEEMod program uses the EMFAC2021 computer program to calculate the emission rates specific for Orange County for employee, vendor and haul truck vehicle trips and the OFFROAD2011 computer program to calculate emission rates for heavy equipment operations. EMFAC2021 and OFFROAD2011 are computer programs generated by CARB that calculates composite emission rates for vehicles. Emission rates are reported by the program in grams per trip and grams per mile or grams per running hour.

The project characteristics in the CalEEMod model were set to a project location of Orange County, utility companies of Southern California Edison and Southern California Gas (with 2027 forecast factors) and a project opening year of 2027.

Land Use Parameters

The proposed project would consist of development of a new 45,706 square foot Fleet Services Building that will include vehicle maintenance bays, administrative staff offices, technician workspaces, and storage spaces. In addition, the project will include a future 20,000 square foot Facilities Operations Building, a 10,000 square foot solar panel canopy, surface parking spaces, extended access road, and a disposal lot. The proposed project's land use parameters that were entered into the CalEEMod model are shown in Table G.

Table G – CalEEMod Land Use Parameters

Proposed Land Use	Land Use Subtype in CalEEMod	Land Use Size ¹	Lot Acreage ²	Building ³ (sq ft)	Landscaped Area ⁴ (sq ft)
Fleet Services Building	Automobile Care Center	45,706 TSF	1.05	45,706	4,596
Facilities Operations Building	Government Office Building	20.0 TSF	0.46	20,000	1,999
Solar Panel Canopy	Unenclosed Parking Structure	10.0 TSF	0.23	10,000	998
Onsite Roads, Disposal Lot and Parking Areas	Other Asphalt Surfaces	2.85 AC	2.85	--	12,428

Notes:

¹ TSF = Thousand Square Feet; AC = Acre.

² Lot acreage calculated based on a project site of 4.59 acres.

³ Building square feet represent area where architectural coatings will be applied

⁴ Landscaped area based on 10 percent of disturbed area landscaped.

Construction Parameters

Construction of the proposed project is anticipated to start July, 2026 and would be completed by December 2027. Since the CalEEMod default construction schedule for the project is approximately 13 months, the CalEEMod default construction schedule was extended by a factor of 1.4 times, to match the schedule provided by the applicant. The construction-related GHG emissions were based on a 30-year amortization rate as recommended in the SCAQMD GHG Working Group meeting on November 19, 2009.

The phases of construction activities that have been analyzed are detailed below and include: 1) Site Preparation, 2) Grading, 3) Building construction, 4) Paving, and 5) Application of architectural coatings.

CalEEMod provides the selection of reduction measures to account for project conditions that would result in less emissions than a project without these conditions. This includes the required to adherence to SCAQMD Rule 403, which requires that the Best Available Control Measures be utilized to reduce fugitive dust emissions and was modeled in CalEEMod by selection of water demolished area two times per day, water all exposed areas three times per day, water unpaved roads twice daily, reduce vehicle speeds on dirt roads and sweep paved roads once per month.

Site Preparation

The site preparation phase would consist of removing any vegetation, tree stumps, and stones onsite prior to grading. The site preparation phase is anticipated to start July 2026 and was modeled as occurring over seven workdays. The site preparation activities would generate an average of 17.5 worker trips per day. In order to account for water truck emissions, three onsite truck trips per day with a quarter-mile length was added to the site preparation phase. The onsite equipment would consist of three rubber-tired dozers, and four of either tractors, loaders, or backhoes.

Grading

The grading phase was modeled as starting after completion of the site preparation phase and was modeled as occurring over 11 workdays. During the grading phase it is anticipated that the site would be balanced with no import or export, however in order to provide a conservative analysis, the grading phase was modeled with 500 cubic yards of material imported to the project site and 500 cubic yards of material exported from the project site. The movement of material to and from the project site would generate an average of 11.4 haul truck trips per day over the duration of the grading phase. The onsite equipment would consist of one excavator, one grader, one rubber-tired dozer, and three of either tractors, loaders, or backhoes. The grading activities would generate an average of 15 automobile trips per day for the workers. In order to account for water truck emissions, three onsite truck trips per day with a quarter-mile length was added to the site preparation phase.

Building Construction

The building construction would occur after the completion of the grading phase and was modeled as occurring over 322 workdays (15 months). The building construction phase would generate an average of 25.2 worker trips and 12.4 vendor trips per day. The onsite equipment would consist of the simultaneous operation of one crane, three forklifts, one generator, one welder, and three of either tractors, loaders, or backhoes, which is based on the CalEEMod default equipment mix.

Paving

The paving phase would consist of paving the onsite roads, disposal lot, and parking areas. The paving phase was modeled as occurring after completion of the building construction phase and occurring over 25 workdays. The paving phase would generate an average of 20 worker trips per day. The onsite equipment would consist of the simultaneous operation of two cement and mortar mixers, one paver, two paving equipment, two rollers, and one of either a tractor, loader, or backhoe, which is based on the CalEEMod default equipment.

Architectural Coating

The application of architectural coatings was modeled as occurring after completion of the paving phase and occurring over 25 workdays. The architectural coating phase was modeled based on covering 99,009 square feet of nonresidential interior area, 32,903 square feet of nonresidential exterior area, and 8,049 square feet of parking and road area. The architectural coating phase would generate an average of 5.05 worker trips per day. The onsite equipment would consist of one air compressor, which is based on the CalEEMod default equipment mix.

Operational Emissions Modeling

The operations-related criteria air pollutant emissions and GHG emissions created by the proposed project have been analyzed through use of the CalEEMod model. The proposed project was analyzed in the CalEEMod model based on the land use parameters provided above and the parameters entered for each operational source is described below.

Mobile Sources

Mobile sources include emissions the additional vehicle miles generated from operation of the proposed project. According to OCPW staff, the new fleet services facility will generate approximately 150 daily vehicle trips (in and out) or a total of 300 one-way daily trips that include both vehicles to be serviced and loaner vehicles. In addition, approximately 50 employees would work at the proposed facility. Based on each employee driving from home to work and back (2 trips) and from work to lunch and back (2 trips), the 50 employees would generate up to 200 daily trips during each workday. Therefore, it is anticipated that operation of the proposed project would generate an average of 500 daily trips, Monday through Friday, which was entered into the CalEEMod model.

Area Sources

Area sources include emissions from consumer products, landscape equipment, and architectural coatings. The area source emissions were based on the on-going use of the proposed project in the CalEEMod model. No changes were made to the default area source parameters in the CalEEMod model.

Energy Usage

Energy usage includes emissions from electricity and natural gas used onsite. The energy usage was based on the ongoing use of the proposed project in the CalEEMod Model. It should be noted that the proposed project would include a 10,000 square foot solar canopy, however since the specifications of the solar canopy are not yet available, no solar PV system credit was accounted for in CalEEMod. No changes were made to the default energy usage parameters in the CalEEMod model.

Solid Waste

Waste includes the GHG emissions associated with the processing of waste from the proposed project as well as the GHG emissions from the waste once it is interred into a landfill. The analysis was based on the default CalEEMod waste generation rate of 194 tons of solid waste per year from the proposed project. No changes were made to the default solid waste parameters or mitigation measures in the CalEEMod model.

Water and Wastewater

Water includes the water used for the interior of the buildings as well as for landscaping and is based on the GHG emissions associated with the energy used to transport and filter the water. The analysis was based on the default CalEEMod water usage rate of 8,273,265 gallons per year of indoor water use and 259,130 gallons per year of outdoor water use. No changes were made to the default water and wastewater parameters in the CalEEMod model.

Refrigeration

Refrigeration is limited to the GHG analysis and is based on the leak rates of refrigerants utilized in air conditioner units and household refrigerators. Since, the proposed Fleet Services Building was analyzed as an Automobile Care Center, which is the closest available but not an exact match to the proposed land use, the Supermarket Refrigeration and Condensing Units was removed from the Automobile Care Center land use in CalEEMod. No other changes were made to the default refrigeration parameters in the CalEEMod model.

8.2 Energy Use Calculations

The proposed project is anticipated to consume energy during both construction and operation of the proposed project and the parameters utilized to calculate energy use from construction and operation of the proposed project are detailed separately below.

Construction-Related Energy Use

Construction of the proposed project is anticipated to use energy in the forms of petroleum fuel for both off-road equipment as well as from the transport of workers and materials to and from the project site and the calculations for each source are described below.

Off-Road Construction Equipment

The off-road construction equipment fuel usage was calculated through use of the CalEEMod model's default off-road equipment assumptions detailed above in Section 8.1. For each piece of off-road equipment, the fuel usage was calculated through use of the *2017 Off-road Diesel Emission Factors* spreadsheet, prepared by CARB (<https://ww3.arb.ca.gov/msei/ordiesel.htm>). The Spreadsheet provides the following formula to calculate fuel usage from off-road equipment:

$$\text{Fuel Used} = \text{Load Factor} \times \text{Horsepower} \times \text{Total Operational Hours} \times \text{BSFC} / \text{Unit Conversion}$$

Where:

Load Factor - Obtained from CalEEMod default values

Horsepower – Obtained from CalEEMod default values

Total Operational Hours – Calculated by multiplying CalEEMod default daily hours by CalEEMod default number of working days for each phase of construction

BSFC – Brake Specific Fuel Consumption (pounds per horsepower-hour) – If less than 100 Horsepower = 0.408, if greater than 100 Horsepower = 0.367

Unit Conversion – Converts pounds to gallons = 7.109

Table H shows the off-road construction equipment fuel calculations based on the above formula. Table H shows that the off-road equipment utilized during construction of the proposed project would consume 41,292 gallons of diesel fuel.

Table H – Off-Road Equipment and Fuel Consumption from Construction of the Proposed Project

Equipment Type	Equipment Quantity	Horse-power	Load Factor	Operating Hours per Day	Total Operational Hours ¹	Fuel Used (gallons)
Site Preparation						
Rubber Tired Dozers	3	367	0.40	8	168	1,273
Tractors/Loaders/Backhoes	4	84	0.37	8	224	400
Grading						
Excavator	1	36	0.38	8	90	70
Grader	1	148	0.41	8	90	281
Rubber Tired Dozer	1	367	0.40	8	90	679

On-Road Construction-Related Vehicle Trips

The on-road construction-related vehicle trips fuel usage was calculated through use of the construction vehicle trip assumptions from the CalEEMod model run as detailed above in Section 8.1. The calculated total construction miles were then divided by the fleet average for South Coast Air Basin portion of Orange County miles per gallon rates for the year 2026 calculated through use of the EMFAC2025 model and the EMFAC2025 model printouts are shown in Appendix B. The worker trips were based on the combined fleet average miles per gallon rates for gasoline powered automobiles, SUVs and pickup trucks and the vendor and haul truck trips were based on the combined T6 and T7 diesel trucks fleet average miles per gallon rate. Table I shows the on-road construction vehicle trips modeled in CalEEMod and the fuel usage calculations.

Table I – On-Road Vehicle Trips and Fuel Consumption from Construction of Proposed Project

Vehicle Trip Types / Fuel Type	Daily Trips	Trip Length (miles)	Total Miles per Day	Total Miles per Phase¹	Fleet Average Miles per Gallon²	Fuel Used (gallons)
Site Preparation						
Worker (Gasoline)	17.5	18.5	324	2,266	22.8	99
Water Trucks (Diesel)	3	0.25	0.75	5	7.7	0.7
Grading						
Worker (Gasoline)	15	18.5	278	3,108	22.8	136
Haul (Diesel)	11.4	20	228	2,554	7.7	331
Water Trucks (Diesel)	3	0.25	0.75	8	7.7	1.1
Building Construction						
Worker (Gasoline)	25.2	18.5	466	150,116	22.8	6,586
Vendor (Diesel)	12.4	10.2	126	40,727	7.7	5,282
Paving						
Worker (Gasoline)	20	18.5	370	9,324	22.8	409
Architectural Coating						
Worker (Gasoline)	5.05	18.5	93	2,354	22.8	103
Total Gasoline Fuel Used from On-Road Construction Vehicles (gallons)						7,334
Total Diesel Fuel Used from On-Road Construction Vehicles (gallons)						5,615

Notes:

¹ Based on: 7 days for Site Preparation; 11 days for Grading; 322 days for Building Construction; 25 days for Paving; and 25 days for Architectural Coating.

² From EMFAC 2025 model (see Appendix B).

Source: CalEEMod Version 2022.1; CARB, 2018.

Table I shows that the on-road construction-related vehicle trips would consume 7,334 gallons of gasoline and 5,615 gallons of diesel fuel. As detailed above, Table H shows that the off-road construction equipment would consume 41,292 gallons of diesel fuel. This would result in the total consumption of 7,334 gallons of gasoline and 46,907 gallons of diesel fuel from construction of the proposed.

Operations-Related Energy Use

The operation of the proposed project is anticipated to use energy in the forms of petroleum fuel, electricity, and natural gas, and the calculations for each source are described below.

Operational Petroleum Fuel

The on-road operations-related vehicle trips fuel usage was calculated through use of the total annual vehicle miles traveled assumptions from the CalEEMod model run as detailed above in Section 8.1, which found that operation of the proposed project would generate 564,751 vehicle miles traveled per year. The calculated total operational miles were then divided by 22.8 miles per gallon, which was calculated through use of the EMFAC2025 model and based on the Orange County miles per gallon rates for the year 2026. The EMFAC2025 model printouts are shown in Appendix B. Based on the above calculation methodology, operational vehicle trips generated from the proposed project would consume 24,777 gallons of gasoline per year.

Operational Electricity Use

The operations-related electricity usage was calculated in the CalEEMod model run that is detailed above in Section 8.1 that found the operation of the proposed project would consume 821,132 kilowatt hours (kWh) per year with implementation of Title 24 part 6 requirements that require the implementation of building energy efficiency standards that include the use of LED lighting. It should be noted that the proposed project would include a 10,000 square foot solar canopy, however since the specifications of the solar canopy are not yet available, no solar PV system credit was accounted for in the electricity use calculations.

Operational Natural Gas Use

The operations-related natural gas usage was calculated in the CalEEMod model run that is detailed above in Section 8.1 that found the proposed project will use 2,463,235 kilo British Thermal Units (kBtu) per year, which is equivalent to 24,638 Therms per year of natural gas.

9.0 THRESHOLDS OF SIGNIFICANCE

9.1 Regional Air Quality

Many air quality impacts that derive from dispersed mobile sources, which are the dominant pollution generators in the Air Basin, often occurs hours later and miles away after photochemical processes have converted primary exhaust pollutants into secondary contaminants such as ozone. The incremental regional air quality impact of an individual project is generally very small and difficult to measure. Therefore, SCAQMD has developed significance thresholds based on the volume of pollution emitted rather than on actual ambient air quality because the direct air quality impact of a project is not quantifiable on a regional scale. The SCAQMD CEQA Handbook states that any project in the Air Basin with daily emissions that exceed any of the identified significance thresholds should be considered as having an individually and cumulatively significant air quality impact. For the purposes to this air quality impact analysis, a regional air quality impact would be considered significant if emissions exceed the SCAQMD significance thresholds identified in Table J.

Table J – SCAQMD Regional Criteria Pollutant Emission Thresholds of Significance

	Pollutant Emissions (pounds/day)						
	VOC	NOx	CO	SOx	PM10	PM2.5	Lead
Construction	75	100	550	150	150	55	3
Operation	55	55	550	150	150	55	3

Source: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2>

9.2 Local Air Quality

Project-related construction air emissions may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin. In order to assess local air quality impacts the SCAQMD has developed Localized Significant Thresholds (LSTs) to assess the project-related air emissions in the project vicinity. SCAQMD has also provided *Final Localized Significance Threshold Methodology* (LST Methodology), July 2008, which details the methodology to analyze local air emission impacts. The LST Methodology found that the primary emissions of concern are NO₂, CO, PM10, and PM2.5.

The LST Methodology provides Look-Up Tables with different thresholds based on the location and size of the project site and distance to the nearest sensitive receptors. As detailed above in Section 7.3, the project site is located in Monitoring Area 17, Central Orange County. The Look-Up Tables include site acreage sizes of 1-acre, 2-acres and 5-acres. Since the area disturbed as part of the project is approximately 4.59 acres, the 2-acre and 5-acre thresholds were interpolated to calculate the thresholds for a 4.59 acre project site.

The nearest sensitive receptor to the project site is the John F. Kennedy Elementary School that is adjacent to the north side of the project site. According to LST Methodology, any receptor located closer than 25 meters (82 feet) shall be based on the 25-meter thresholds. Table K below shows the LSTs for NO_x, CO, PM10 and PM2.5 for both construction and operational activities.

Table K – SCAQMD Local Air Quality Thresholds of Significance

Activity	Allowable Emissions (pounds/day) ¹			
	Nox	CO	PM10	PM2.5
Construction	174	1,179	12	7
Operation	174	1,179	3	2

Notes:

¹ The nearest sensitive receptor is the John F. Kennedy Elementary School that is adjacent to the north side of the project site. According to SCAQMD methodology, all receptors closer than 25 meters are based on the 25-meter threshold.

Source: Calculated from SCAQMD's Mass Rate Look-up Tables for 2 and 5 acres interpolated to 4.59 acres in Air Monitoring Area 17, Central Orange County.

9.3 Toxic Air Contaminants

According to the SCAQMD CEQA Handbook, any project that has the potential to expose the public to toxic air contaminants in excess of the following thresholds would be considered to have a significant air quality impact:

- If the Maximum Incremental Cancer Risk is 10 in one million or greater; or
- Toxic air contaminants from the proposed project would result in a Hazard Index increase of 1 or greater.

In order to determine if the proposed project may have a significant impact related to TACs, the *Health Risk Assessment Guidance for analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*, (Diesel Analysis) prepared by SCAQMD, August 2003, recommends that if the proposed project is anticipated to create TACs through stationary sources or regular operations of diesel trucks on the project site, then the proximity of the nearest receptors to the source of the TAC and the toxicity of the HAP should be analyzed through a comprehensive facility-wide health risk assessment (HRA).

9.4 Odor Impacts

The SCAQMD CEQA Handbook states that an odor impact would occur if the proposed project creates an odor nuisance pursuant to SCAQMD Rule 402, which states:

“A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

The provisions of this rule shall not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals.”

If the proposed project results in a violation of Rule 402 with regards to odor impacts, then the proposed project would create a significant odor impact.

9.5 Energy Conservation

The 2022 CEQA California Environmental Quality Act Statutes & Guidelines (2022 CEQA Guidelines) include an Energy Section that analyzes the proposed project's energy consumption in order to avoid or reduce

inefficient, wasteful or unnecessary consumption of energy. Appendix F of the 2022 CEQA Statute and Guidelines, states the following:

The goal of conserving energy implies the wise and efficient use of energy. The means of achieving this goal include:

- (1) Decreasing overall per capita energy consumption,
- (2) Decreasing reliance on fossil fuels such as coal, natural gas and oil, and
- (3) Increasing reliance on renewable energy sources.

Since the Energy Section was recently added, no state or local agencies have adopted specific criteria or thresholds to be utilized in an energy impact analysis. However, Appendix F, Subsection II.C of the 2022 CEQA Guidelines provides the following criteria for determining significance.

1. The project's energy requirements and its energy use efficiencies by amount and fuel type for each stage of the project life cycle including construction, operation, maintenance and/or removal. If appropriate, the energy intensiveness of materials may be discussed.
2. The effects of the project on local and regional energy supplies and on requirement for additional capacity.
3. The effects of the project on peak and base period demands for electricity and other forms of energy.
4. The degree to which the project complies with existing energy standards.
5. The effects of the project on energy resources.
6. The project's projected transportation energy use requirements and its overall use of efficient transportation alternatives.

If the proposed project creates inefficient, wasteful or unnecessary consumption of energy during construction or operation activities or conflicts with a state or local plan for renewable energy or energy efficiency, then the proposed project would create a significant energy impact.

9.6 Greenhouse Gas Emissions

The City of Santa Ana has adopted a Climate Action Plan (Santa Ana CAP) that has been prepared to assist the City in conforming to the GHG emissions reductions as mandated under AB 32. The Santa Ana CAP provides community-wide GHG emissions reduction goals of 15 percent below the baseline year 2008 by 2020 and 30 percent below the baseline year 2008 by 2035. A critical aspect of having a CAP that fits the criteria within State CEQA Guidelines Section 15183.5 is to have reduction targets that align with statewide goals. The Santa Ana CAP's 2020 reduction target parallels the state's commitment to reducing GHG emissions under AB 32. However, it proceeds even farther by identifying targets that are specific to the City's geographic location as well as activity types and their associated sources. Therefore, because the Santa Ana CAP's 2020 target aligns with the statewide goal for 2020, the Santa Ana CAP is consistent with AB 32. As such, for up to 2020, the Santa Ana CAP was a qualifying plan under State CEQA Guidelines Section 15183.5.

Although the Santa Ana CAP calculated emissions and quantified reductions to achieve the Santa Ana CAP's 2035 emissions target, the Santa Ana CAP does not achieve the Statewide reduction goals. Specifically, the statewide target in 2030 (as codified in SB 32) is 40 percent below 1990 levels and the 2050 target (not yet codified) is 80 percent below 1990 levels. The Santa Ana CAP's 2035 target of 1,371,602 MTCO₂e is only 18 percent below the 2020 target of 1,665,516 MTCO₂e (i.e., 1990 levels). This

level of reduction is not enough to achieve a fair share contribution toward the statewide targets of 40 percent and 80 percent below 1990 levels by 2030 and 2050, respectively. Therefore, because the Santa Ana CAP does not that align with statewide goals beyond 2020, the CAP is not consistent with the criteria within State CEQA Guidelines Section 15183.5 for the post-2020 period. It should also be noted that the County has not yet adopted a Climate Action Plan or any other GHG-related thresholds or GHG reduction plans. As such, for determination of significance, this analysis has utilized on the SCAQMD's draft threshold of 3,000 MTCO₂e per year for a quantitative threshold of significance for GHG emissions and CARB's 2022 Scoping Plan for consistency with an applicable GHG emissions reduction plan.

The GHG emissions analysis for both construction and operation of the proposed project can be found below in Sections 10.8 and 10.9.

10.0 IMPACT ANALYSIS

10.1 CEQA Thresholds of Significance

Consistent with CEQA and the State CEQA Guidelines, a significant impact related to air quality, energy, and GHG emissions would occur if the proposed project is determined to:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard;
- Expose sensitive receptors to substantial pollutant concentrations;
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people;
- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation;
- Conflict with or obstruct a state or local plan for renewable energy;
- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

10.2 Air Quality Compliance

The proposed project would not conflict with or obstruct implementation of the SCAQMD Air Quality Management Plan (AQMP). The following section discusses the proposed project's consistency with the SCAQMD AQMP.

SCAQMD Air Quality Management Plan

The California Environmental Quality Act (CEQA) requires a discussion of any inconsistencies between a proposed project and applicable General Plans and regional plans (CEQA Guidelines Section 15125). The regional plan that applies to the proposed project includes the SCAQMD AQMP. Therefore, this section discusses any potential inconsistencies of the proposed project with the AQMP.

The purpose of this discussion is to set forth the issues regarding consistency with the assumptions and objectives of the AQMP and discuss whether the proposed project would interfere with the region's ability to comply with Federal and State air quality standards. If the decision-makers determine that the proposed project is inconsistent, the lead agency may consider project modifications or inclusion of mitigation to eliminate the inconsistency.

The SCAQMD CEQA Handbook states that "New or amended GP Elements (including land use zoning and density amendments), Specific Plans, and significant projects must be analyzed for consistency with the AQMP." Strict consistency with all aspects of the plan is usually not required. A proposed project should be considered to be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The SCAQMD CEQA Handbook identifies two key indicators of consistency:

-
- (1) Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.
 - (2) Whether the project will exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

Both of these criteria are evaluated in the following sections.

Criterion 1 - Increase in the Frequency or Severity of Violations?

Based on the air quality modeling analysis contained in this report, short-term regional construction air emissions would not result in significant impacts based on SCAQMD regional thresholds of significance discussed above in Section 9.1 or local thresholds of significance discussed above in Section 9.2. The ongoing operation of the proposed project would generate air pollutant emissions that are inconsequential on a regional basis and would not result in significant impacts based on SCAQMD thresholds of significance discussed above in Section 9.1. The analysis for long-term local air quality impacts showed that local pollutant concentrations would not be projected to exceed the air quality standards. Therefore, a less than significant long-term impact would occur and no mitigation would be required.

Therefore, based on the information provided above, the proposed project would be consistent with the first criterion.

Criterion 2 - Exceed Assumptions in the AQMP?

Consistency with the AQMP assumptions is determined by performing an analysis of the proposed project with the assumptions in the 2022 AQMP. The emphasis of this criterion is to ensure that the analyses conducted for the proposed project are based on the same forecasts as the AQMP. The 2022 AQMP was developed through use of the planning forecasts provided in the Connect SoCal and 2019 FTIP. The Connect SoCal is a major planning document for the regional transportation and land use network within Southern California. The Connect SoCal is a long-range plan that is required by federal and state requirements placed on SCAG and is updated every four years. The 2019 FTIP provides long-range planning for future transportation improvement projects that are constructed with state and/or federal funds within Southern California. Local governments are required to use these plans as the basis of their plans for the purpose of consistency with applicable regional plans under CEQA. For this project, the City of Santa Ana General Plan Land Use Map⁵ defines the assumptions that are represented in AQMP.

The project site is currently designated as Industrial (IND) in the General Plan. The proposed project consists of development of a Fleet Services Building, Facilities Operations Building, solar panel canopy, surface parking spaces, extended access road, and a disposal lot. The proposed project is an allowed use within the current land use designation. As such, the proposed project is not anticipated to exceed the AQMP assumptions for the project site and is found to be consistent with the AQMP for the second criterion.

Based on the above, the proposed project will not result in an inconsistency with the SCAQMD AQMP. Therefore, a less than significant impact will occur in relation to implementation of the AQMP.

5 Obtained from: <https://storymaps.arcgis.com/stories/f200c8e3433b41948e2340024ff8cd1d>

Level of Significance

Less than significant impact.

10.3 Cumulative Net Increase in Non-Attainment Pollution

The proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard. The SCAQMD has published a report on how to address cumulative impacts from air pollution: White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution (<http://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/cumulative-impacts-working-group/cumulative-impacts-white-paper.pdf>). In this report the AQMD clearly states (Page D-3):

“...the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or Environmental Impact Report (EIR). The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for TAC emissions. The project specific (project increment) significance threshold is $HI > 1.0$ while the cumulative (facility- wide) is $HI > 3.0$. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts. Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant.”

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD’s recommended daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable. The following section calculates the potential air emissions associated with the construction and operations of the proposed project and compares the emissions to the SCAQMD standards.

Construction Emissions

The construction activities for the proposed project are anticipated to include the site preparation and grading of the project site, building construction of the Fleet Services Building, Facilities Operations Building, and solar panel canopy, paving of the onsite roads, disposal lot, and parking areas, and application of architectural coatings. The CalEEMod model has been utilized to calculate the construction-related emissions from the proposed project and the input parameters utilized in this analysis have been detailed in Section 8.1. The maximum daily regional construction-related criteria pollutant emissions from the proposed project are shown below in Table L.

Table L – Construction-Related Criteria Pollutant Emissions

Season and Year of Construction	Maximum Daily Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO ₂	PM10	PM2.5
Daily Summer Maximum						
2026	3.20	29.3	29.8	0.05	6.86	3.85
2027	1.11	9.85	14.4	0.03	0.78	0.42
Daily Winter Maximum						
2026	1.16	10.4	14.3	0.03	0.82	0.46
2027	26.1	9.87	14.2	0.03	0.78	0.42
Maximum Daily Construction Emissions	26.1	29.3	29.8	0.05	6.86	3.85
SCQAMD Regional Thresholds	75	100	550	150	150	55
SCAQMD Local Thresholds¹	--	174	1,179	--	12	7
Exceeds Thresholds?	No	No	No	No	No	No

Notes:

¹ The nearest offsite sensitive receptor is the John F. Kennedy Elementary School that is adjacent to the north side of the project site. According to SCAQMD methodology, all receptors closer than 25 meters are based on the 25-meter threshold. Calculated from SCAQMD's Mass Rate Look-up Tables for 4.59 acres interpolated from two and five acres in Air Monitoring Area 17, Central Orange County.

Source: CalEEMod Version 2022.1.

Table L shows that none of the analyzed criteria pollutants would exceed the regional emissions thresholds during construction of the proposed project. Table L also shows that the proposed project's regional construction-related criteria pollutant emissions that consist of both onsite and offsite emissions sources would not exceed the local thresholds, which provides for a worst-case analysis, since the local thresholds are for analyzing only the emissions created onsite. Therefore, a less than significant regional or local air quality impact would occur from construction of the proposed project.

Operational Emissions

The on-going operation of the proposed project would result in a long-term increase in air quality emissions. This increase would be due to emissions from onsite area sources and energy usage emissions created from the on-going use of the proposed project. The operations-related regional criteria air quality impacts created by the proposed project have been analyzed through use of the CalEEMod model and the input parameters utilized in this analysis have been detailed in Section 8.1. The worst-case summer or winter VOC, NOx, CO, SO₂, PM10, and PM2.5 daily emissions created from the proposed project's long-term operations have been calculated and are summarized below in Table M and the CalEEMod emissions printouts are shown in Appendix A.

Table M – Operational Criteria Pollutant Emissions

Emissions Source	Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO ₂	PM10	PM2.5
Mobile Sources ¹	1.30	0.73	7.30	0.02	1.50	0.40
Area Sources ²	2.10	0.03	3.30	<0.01	0.01	<0.01
Energy Usage ³	0.04	0.66	0.56	<0.01	0.05	0.05
Total Emissions	3.44	1.42	11.16	0.02	1.56	0.45
SCQAMD Regional Thresholds	55	55	550	150	150	55
SCAQMD Local Thresholds	--	174	1,179	--	3	2
Exceeds Thresholds?	No	No	No	No	No	No

Notes:

¹ Mobile sources consist of emissions from vehicles and road dust.

² Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.

³ Energy usage consist of emissions from natural gas usage.

Source: Calculated from CalEEMod Version 2022.1.

The data provided in Table M shows that none of the analyzed criteria pollutants would exceed either the regional or local emissions thresholds during operation of the proposed project. Therefore, less than significant regional and local air quality impacts would occur from operation of the proposed project.

Friant Ranch Case

In *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502 (also referred to as “*Friant Ranch*”), the California Supreme Court held that when an EIR concluded that when a project would have significant impacts to air quality impacts, an EIR should “make a reasonable effort to substantively connect a project’s air quality impacts to likely health consequences.” In order to determine compliance with this Case, the Court developed a multi-part test that includes the following:

- 1) The air quality discussion shall describe the specific health risks created from each criteria pollutant, including diesel particulate matter.

This Analysis details the specific health risks created from each criteria pollutant above in Section 4.1 and specifically in Table B. In addition, the specific health risks created from diesel particulate matter is detailed above in Section 2.2 of this analysis. As such, this analysis meets the part 1 requirements of the Friant Ranch Case.

- 2) The analysis shall identify the magnitude of the health risks created from the Project. The Ruling details how to identify the magnitude of the health risks. Specifically, on page 24 of the ruling it states “The Court of Appeal identified several ways in which the EIR could have framed the analysis so as to adequately inform the public and decision makers of possible adverse health effects. The County could have, for example, identified the Project’s impact on the days of nonattainment per year.”

The Friant Ranch Case found that an EIR’s air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided. As noted in the Brief of Amicus Curiae by the SCAQMD in the Friant Ranch case (<https://www.courts.ca.gov/documents/9-s219783-ac-south-coast-air-quality-mgt-dist-041315.pdf>) (Brief), SCAQMD has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, and thus it is uniquely situated to express an opinion on how lead agencies should correlate air quality impacts with specific health outcomes. The SCAQMD discusses that it may be infeasible to quantify health risks caused by projects similar to the proposed Project, due to many factors. It is necessary to have data regarding the sources and types of air toxic contaminants, location of emission points, velocity of emissions, the meteorology and topography of the area, and the location of receptors (worker and residence). The Brief states that it may not be feasible to perform a health risk assessment for airborne toxics that will be emitted by a generic industrial building that was built on “speculation” (i.e., without knowing the future tenant(s)). Even where a health risk assessment can be prepared, however, the resulting maximum health risk value is only a calculation of risk, it does not necessarily mean anyone will contract cancer as a result of the Project. The Brief also cites the author of the CARB methodology, which reported that a PM2.5 methodology is not suited for small

projects and may yield unreliable results. Similarly, SCAQMD staff does not currently know of a way to accurately quantify ozone-related health impacts caused by NOx or VOC emissions from relatively small projects, due to photochemistry and regional model limitations. The Brief concludes, with respect to the Friant Ranch EIR, that although it may have been technically possible to plug the data into a methodology, the results would not have been reliable or meaningful.

On the other hand, for extremely large regional projects (unlike the proposed project), the SCAQMD states that it has been able to correlate potential health outcomes for very large emissions sources – as part of their rulemaking activity, specifically 6,620 pounds per day of NOx and 89,180 pounds per day of VOC were expected to result in approximately 20 premature deaths per year and 89,947 school absences due to ozone. As shown above in Table L, project-related construction activities would generate a maximum of 26.1 pounds per day of VOC and 29.3 pounds per day of NOx and as shown above in Table M, operation of the proposed project would generate 3.44 pounds per day of VOC and 1.42 pounds per day NOx. The proposed project would not generate anywhere near these levels of 6,620 pounds per day of NOx or 89,190 pounds per day of VOC emissions. Therefore, the proposed project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level.

Notwithstanding, this analysis does evaluate the proposed project's localized impact to air quality for emissions of CO, NOx, PM10, and PM2.5 by comparing the proposed project's onsite emissions to the SCAQMD's applicable LST thresholds. As evaluated in this analysis, the proposed project would not result in emissions that exceeded the SCAQMD's LSTs. Therefore, the proposed project would not be expected to exceed the most stringent applicable federal or state ambient air quality standards for emissions of CO, NOx, PM10, and PM2.5.

Local CO Hotspot Impacts from Project-Generated Vehicular Trips

CO is the pollutant of major concern along roadways because the most notable source of CO is motor vehicles. For this reason, CO concentrations are usually indicative of the local air quality generated by a roadway network and are used as an indicator of potential local air quality impacts. Local air quality impacts can be assessed by comparing future without and with project CO levels to the State and Federal CO standards of 20 ppm over one hour or 9 ppm over eight hours.

At the time of the 1993 Handbook, the Air Basin was designated nonattainment under the CAAQS and NAAQS for CO. With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations in the Air Basin and in the state have steadily declined. In 2007, the Air Basin was designated in attainment for CO under both the CAAQS and NAAQS. SCAQMD conducted a CO hot spot analysis⁶ for attainment at the busiest intersections in Los Angeles during the peak morning and afternoon periods and did not predict a violation of CO standards. Since the nearby intersections to the proposed project are much smaller with less traffic than what was analyzed by the SCAQMD, no local CO Hotspot are anticipated to be created from the proposed project and no CO Hotspot modeling was performed. Therefore, a less than significant long-term air quality impact is anticipated to local air quality with the on-going use of the proposed project.

⁶ The four intersections analyzed by the SCAQMD were: Long Beach Boulevard and Imperial Highway; Wilshire Boulevard and Veteran Avenue; Sunset Boulevard and Highland Avenue; and La Cienega Boulevard and Century Boulevard. The busiest intersection evaluated (Wilshire and Veteran) had a daily traffic volume of approximately 100,000 vehicles per day with LOS E in the morning and LOS F in the evening peak hour.

Therefore, the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant.

Level of Significance

Less than significant impact.

10.4 Sensitive Receptors

The proposed project would not expose sensitive receptors to substantial pollutant concentrations. The local concentrations of criteria pollutant emissions produced in the nearby vicinity of the proposed project, which may expose sensitive receptors to substantial concentrations have been calculated above in Section 10.3 for both construction and operations, which are discussed separately below. The discussion below also includes an analysis of the potential impacts from toxic air contaminant emissions. The nearest sensitive receptor to the project site is the John F. Kennedy Elementary School that is adjacent to the north side of the project site. There are also the multi-family homes that are as near as 95 feet west of the project site.

Construction-Related Sensitive Receptor Impacts

The construction activities for the proposed project are anticipated to include the site preparation and grading of the project site, building construction of the Fleet Services Building, Facilities Operations Building, and solar panel canopy, paving of the onsite roads, disposal lot, and parking areas, and application of architectural coatings. Construction activities may expose sensitive receptors to substantial pollutant concentrations of localized criteria pollutant concentrations and from toxic air contaminant emissions created from onsite construction equipment, which are described below.

Local Criteria Pollutant Impacts from Construction

The local air quality impacts from construction of the proposed project have been analyzed above in Section 10.3 and found that the construction of the proposed project would not exceed the local NO_x, CO, PM₁₀ and PM_{2.5} thresholds of significance discussed above in Section 9.2. Therefore, construction of the proposed project would create a less than significant construction-related impact to local air quality and no mitigation would be required.

Toxic Air Contaminants Impacts from Construction

The greatest potential for toxic air contaminant emissions would be related to diesel particulate matter (DPM) emissions associated with heavy equipment operations during construction of the proposed project. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of “individual cancer risk”. “Individual Cancer Risk” is the likelihood that a person exposed to concentrations of toxic air contaminants over a 70-year lifetime will contract cancer, based on the use of standard risk-assessment methodology. It should be noted that the most current cancer risk assessment methodology recommends analyzing a 30-year exposure period for the nearby sensitive receptors (OEHHA, 2015).

Given the relatively limited number of heavy-duty construction equipment, the varying distances that construction equipment would operate to the nearby sensitive receptors, and the short-term construction schedule, the proposed project would not result in a long-term (i.e., 30 or 70 years) substantial source of toxic air contaminant emissions and corresponding individual cancer risk. In addition, California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 regulates emissions from off-road diesel

equipment in California. This regulation limits idling of equipment to no more than five minutes, requires equipment operators to label each piece of equipment and provide annual reports to CARB of their fleet's usage and emissions. This regulation also requires systematic upgrading of the emission Tier level of each fleet, and currently no commercial operator is allowed to purchase Tier 0, Tier 1 or Tier 2 equipment. In addition to the purchase restrictions, equipment operators need to meet fleet average emissions targets that become more stringent each year between years 2014 and 2023. By January, 2026, 75 percent or more of all contractors' equipment fleets must be Tier 2 or higher and by January, 2029 100 percent of all equipment fleets must be Tier 2 or higher. Therefore, no significant short-term DPM impacts would occur during construction of the proposed project.

Operations-Related Sensitive Receptor Impacts

The on-going operations of the proposed project may expose sensitive receptors to substantial pollutant concentrations of local CO emission impacts from the project-generated vehicular trips and from the potential local air quality impacts from onsite operations. The following analyzes the vehicular CO emissions. Local criteria pollutant impacts from onsite operations, and toxic air contaminant impacts.

Local CO Hotspot Impacts from Project-Generated Vehicle Trips

CO is the pollutant of major concern along roadways because the most notable source of CO is motor vehicles. For this reason, CO concentrations are usually indicative of the local air quality generated by a roadway network and are used as an indicator of potential impacts to sensitive receptors. The analysis provided above in Section 10.3 shows that no local CO Hotspots are anticipated to be created at any nearby intersections from the vehicle traffic generated by the proposed project. Therefore, operation of the proposed project would result in a less than significant exposure of offsite sensitive receptors to substantial pollutant concentrations.

Local Criteria Pollutant Impacts from Onsite Operations

The local air quality impacts from the operation of the proposed project would occur from onsite sources such as architectural coatings and landscaping equipment. The analysis provided above in Section 10.3 found that the operation of the proposed project would not exceed the local NOx, CO, PM10 and PM2.5 thresholds of significance discussed above in Section 9.2. Therefore, the on-going operations of the proposed project would create a less than significant operations-related impact to local air quality due to on-site emissions and no mitigation would be required.

Operations-Related Toxic Air Contaminant Impacts

The proposed project consists of development of a new fleet services facility that would generate DPM emissions from the servicing of diesel vehicles and from diesel vehicle trips to and from the project site. Particulate matter (PM) from diesel exhaust is the predominant TAC in most areas and according to *The California Almanac of Emissions and Air Quality 2013 Edition*, prepared by CARB, about 80 percent of the outdoor TAC cancer risk is from diesel exhaust. Some chemicals in diesel exhaust, such as benzene and formaldehyde have been listed as carcinogens by State Proposition 65 and the Federal Hazardous Air Pollutants program.

According to the *2020 CEQA California Environmental Quality Act Statute & Guidelines* (State CEQA Guidelines), Appendix M provides the performance standards for infill projects eligible for streamlined review and states the following:

“Significant sources of air pollution” include airports, marine ports, rail yards and distribution centers that receive more than 100 heavy-duty truck visits per day, as well as stationary sources that are designated major by the Clean Air Act.

In addition, the *Health Risk Assessments for Proposed Land Use Project*, prepared by CAPCOA, July 2009, details that a potentially significant impact may occur if sensitive receptors are placed within 1,000 feet of distribution centers that generate more than 100 trucks deliveries per day. As detailed above in Section 8.1, the new fleet services facility will generate approximately 150 daily vehicle trips (in and out). According to OCPW staff, less than five percent of the fleet is diesel-powered or approximately 7.5 daily trips to the project site would be from diesel-powered vehicles, which is well below both the State CEQA Guidelines and CAPCOA guidelines provided above for when a potentially significant health risk impact would occur from diesel vehicle emissions. Based on the above reasons it can be reasonably concluded that the DPM emissions created from the on-going operation of the proposed project would result in a less than significant TAC impact to the nearby sensitive receptors and no mitigation would be required.

Level of Significance

Less than significant impact.

10.5 Odor Emissions

The proposed project would not create objectionable odors affecting a substantial number of people. Individual responses to odors are highly variable and can result in a variety of effects. Generally, the impact of an odor results from a variety of factors such as frequency, duration, offensiveness, location, and sensory perception. The frequency is a measure of how often an individual is exposed to an odor in the ambient environment. The intensity refers to an individual's or group's perception of the odor strength or concentration. The duration of an odor refers to the elapsed time over which an odor is experienced. The offensiveness of the odor is the subjective rating of the pleasantness or unpleasantness of an odor. The location accounts for the type of area in which a potentially affected person lives, works, or visits; the type of activity in which he or she is engaged; and the sensitivity of the impacted receptor.

Sensory perception has four major components: detectability, intensity, character, and hedonic tone. The detection (or threshold) of an odor is based on a panel of responses to the odor. There are two types of thresholds: the odor detection threshold and the recognition threshold. The detection threshold is the lowest concentration of an odor that will elicit a response in a percentage of the people that live and work in the immediate vicinity of the project site and is typically presented as the mean (or 50 percent of the population). The recognition threshold is the minimum concentration that is recognized as having a characteristic odor quality, this is typically represented by recognition by 50 percent of the population. The intensity refers to the perceived strength of the odor. The odor character is what the substance smells like. The hedonic tone is a judgment of the pleasantness or unpleasantness of the odor. The hedonic tone varies in subjective experience, frequency, odor character, odor intensity, and duration. Potential odor impacts have been analyzed separately for construction and operations below.

Construction-Related Odor Impacts

Potential sources that may emit odors during construction activities include the application of coatings such as asphalt pavement, paints and solvents and from emissions from diesel equipment. Standard construction requirements that limit the time of day when construction may occur as well as SCAQMD Rule 1108 that limits VOC content in asphalt and Rule 1113 that limits the VOC content in paints and solvents would minimize odor impacts from construction. As such, the objectionable odors that may be

produced during the construction process would be temporary and would not likely be noticeable for extended periods of time beyond the project site's boundaries. Through compliance with the applicable regulations that reduce odors and due to the transitory nature of construction odors, a less than significant odor impact would occur and no mitigation would be required.

Operations-Related Odor Impacts

The proposed project would consist of development of a Fleet Services Building, Facilities Operations Building, solar panel canopy, surface parking spaces, extended access road, and a disposal lot. Potential sources that may emit odors during the on-going operations of the proposed project would primarily occur from the trash storage areas. Pursuant to City regulations, permanent trash enclosures that protect trash bins from rain as well as limit air circulation would be required for the trash storage areas. Due to the distance of the nearest receptors from the project site and through compliance with SCAQMD's Rule 402, City trash storage regulations, a less than significant impact related to odors would occur during the on-going operations of the proposed project.

Level of Significance

Less than significant impact.

10.6 Energy Consumption

The proposed project would impact energy resources during construction and operation. Energy resources that would be potentially impacted include electricity, natural gas, and petroleum based fuel supplies and distribution systems. This analysis includes a discussion of the potential energy impacts of the proposed projects, with particular emphasis on avoiding or reducing inefficient, wasteful, and unnecessary consumption of energy. A general definition of each of these energy resources are provided below.

Electricity, a consumptive utility, is a man-made resource. The production of electricity requires the consumption or conversion of energy resources, including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources, into energy. The delivery of electricity involves a number of system components, including substations and transformers that lower transmission line power (voltage) to a level appropriate for on-site distribution and use. The electricity generated is distributed through a network of transmission and distribution lines commonly called a power grid. Conveyance of electricity through transmission lines is typically responsive to market demands. In 2024, Orange County consumed 19,225 Gigawatt-hours per year of electricity⁷.

Natural gas is a combustible mixture of simple hydrocarbon compounds (primarily methane) that is used as a fuel source. Natural gas consumed in California is obtained from naturally occurring reservoirs, mainly located outside the State, and delivered through high-pressure transmission pipelines. The natural gas transportation system is a nationwide network and, therefore, resource availability is typically not an issue. Natural gas satisfies almost one-third of the State's total energy requirements and is used in electricity generation, space heating, cooking, water heating, industrial processes, and as a transportation

7 Obtained from: <https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data/california-energy-consumption-dashboards-0>

fuel. Natural gas is measured in terms of cubic feet. In 2024, Orange County consumed 561.7 million Therms of natural gas⁸.

Petroleum-based fuels currently account for a majority of the California's transportation energy sources and primarily consist of diesel and gasoline types of fuels. However, the state has been working on developing strategies to reduce petroleum use. Over the last decade California has implemented several policies, rules, and regulations to improve vehicle efficiency, increase the development and use of alternative fuels, reduce air pollutants and GHG emissions from the transportation sector, and reduce vehicle miles traveled (VMT). Accordingly, petroleum-based fuel consumption in California has declined. In 2023, 1,150 million gallons of gasoline and 62 million gallons of diesel was sold in Orange County⁹.

The following section calculates the potential energy consumption associated with the construction and operations of the proposed project and provides a determination if any energy utilized by the proposed project is wasteful, inefficient, or unnecessary consumption of energy resources.

Construction Energy

The proposed project would consume energy resources during construction in three (3) general forms:

1. Petroleum-based fuels used to power off-road construction vehicles and equipment on the Project Site, construction worker travel to and from the Project Site, as well as delivery and haul truck trips (e.g. hauling of demolition material to off-site reuse and disposal facilities);
2. Electricity associated with the conveyance of water that would be used during Project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power; and,
3. Energy used in the production of construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction-Related Electricity

During construction the proposed project would consume electricity to construct the proposed structures. Electricity would be supplied to the project site by SCE and would be obtained from the existing electrical lines in the vicinity of the project site. The use of electricity from existing power lines rather than temporary diesel or gasoline powered generators would minimize impacts on fuel consumption. Electricity consumed during project construction would vary throughout the construction period based on the construction activities being performed. Various construction activities include electricity associated with the conveyance of water that would be used during project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power. Such electricity demand would be temporary, nominal, and would cease upon the completion of construction. Overall, construction activities associated with the proposed project would require limited electricity consumption that would not be expected to have an adverse impact on available electricity supplies and infrastructure. Therefore, the use of electricity during project construction would not be wasteful, inefficient, or unnecessary.

8 Obtained from: <https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data/california-energy-consumption-dashboards-1>

9 Obtained from: <https://www.energy.ca.gov/media/3874>

Since there are currently power lines in the vicinity of the project site, it is anticipated that only nominal improvements would be required to SCE distribution lines and equipment with development of the proposed project. Compliance with City's guidelines and requirements would ensure that the proposed project fulfills its responsibilities relative to infrastructure installation, coordinates any electrical infrastructure removals or relocations, and limits any impacts associated with construction of the project. Construction of the project's electrical infrastructure is not anticipated to adversely affect the electrical infrastructure serving the surrounding uses or utility system capacity.

Construction-Related Petroleum Fuel Use

Petroleum-based fuel usage represents the highest amount of transportation energy potentially consumed during construction, which would be utilized by both off-road equipment operating on the project site and on-road automobiles transporting workers to and from the project site and on-road trucks transporting equipment and supplies to the project site.

The off-road construction equipment fuel usage was calculated through use of the off-road equipment assumptions and fuel use assumptions shown above in Section 8.2, which found that construction of the proposed project would consume 7,334 gallons of gasoline and 46,907 gallons of diesel fuel. This equates to 0.0006 percent of the gasoline and 0.076 percent of the diesel used annually in Orange County. As such, the construction-related petroleum use would be nominal, when compared to current county-wide petroleum usage rates.

Construction activities associated with the proposed project would be required to adhere to all State and SCAQMD regulations for off-road equipment and on-road trucks, which provide minimum fuel efficiency standards. As such, construction activities for the proposed project would not result in the wasteful, inefficient, and unnecessary consumption of energy resources. Impacts regarding transportation energy would be less than significant. Development of the project would not result in the need to manufacture construction materials or create new building material facilities specifically to supply the proposed project. It is difficult to measure the energy used in the production of construction materials such as asphalt, steel, and concrete, it is reasonable to assume that the production of building materials such as concrete, steel, etc., would employ all reasonable energy conservation practices in the interest of minimizing the cost of doing business.

Operational Energy

The on-going operation of the proposed project would require the use of energy resources for multiple purposes including, but not limited to, heating/ventilating/air conditioning (HVAC), refrigeration, lighting, appliances, and electronics. Energy would also be consumed during operations related to water usage, solid waste disposal, landscape equipment, and vehicle trips.

Operations-Related Electricity

Operation of the proposed project would result in consumption of electricity at the project site. As detailed above in Section 8.2 the proposed project would consume 821,132 kilowatt-hours per year of electricity, which does not account for the electricity that will be produced by the proposed 10,000 square foot solar canopy. This equates to 0.0043 percent of the electricity consumed annually in Orange County. As such, the operations-related electricity use would be nominal, when compared to current electricity usage rates in the County.

It should be noted that, the proposed project would comply with all Federal, State, and City requirements related to the consumption of electricity, that includes CCR Title 24, Part 6 *Building Energy Efficiency Standards* and CCR Title 24, Part 11: *California Green Building Standards*. The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into the proposed structures, including enhanced insulation, use of energy efficient lighting and appliances, water and space heating systems, as well as requiring a variety of other energy-efficiency measures to be incorporated into the proposed project. Therefore, it is anticipated the proposed project will be designed and built to minimize electricity use and that existing and planned electricity capacity and electricity supplies would be sufficient to support the proposed project's electricity demand. Thus, the project would not result in the wasteful or inefficient use of electricity and no mitigation measures would be required.

Operations-Related Natural Gas

Operation of the proposed project would result in increased consumption of natural gas at the project site. As detailed above in Section 8.3 the proposed project would consume 2,463 MBTU per year of natural gas. This equates to 0.0044 percent of the natural gas consumed annually in Orange County. As such, the operations-related natural gas use would be nominal, when compared to current natural gas usage rates in the County.

It should be noted that, the proposed project would comply with all Federal, State, and City requirements related to the consumption of natural gas, that includes CCR Title 24, Part 6 *Building Energy Efficiency Standards* and CCR Title 24, Part 11: *California Green Building Standards*. The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into the proposed project, including enhanced insulation as well as use of efficient natural gas appliances and HVAC units. Therefore, it is anticipated the proposed project will be designed and built to minimize natural gas use and that existing and planned natural gas capacity and natural gas supplies would be sufficient to support the proposed project's natural gas demand. Thus, impacts with regard to natural gas supply and infrastructure capacity would be less than significant and no mitigation measures would be required.

Operations-Related Vehicular Petroleum Fuel Usage

Operation of the proposed project would result in increased consumption of petroleum-based fuels related to vehicular travel to and from the project site. As detailed above in Section 8.2 the proposed project would consume 24,777 gallons of gasoline per year from vehicle travel. This equates to 0.02 percent of the gasoline consumed annually in Orange County. As such, the operations-related petroleum use would be nominal, when compared to current petroleum usage rates

It should be noted that, the proposed project would comply with all Federal, State, County and City requirements related to the consumption of transportation energy that includes California Code of Regulations Title 24, Part 10 California Green Building Standards that require conduit to be installed to the proposed parking areas for future EV charging stations. Therefore, it is anticipated the proposed project will be designed and built to minimize transportation energy through the promotion of the use of electric-powered vehicles and it is anticipated that existing and planned capacity and supplies of transportation fuels would be sufficient to support the proposed project's demand. Thus, impacts with regard transportation energy supply and infrastructure capacity would be less than significant and no mitigation measures would be required.

In conclusion, the proposed project would comply with regulatory compliance measures outlined by the State and City related to air quality (see section 4.0 above), energy (see section 5.0 above), and GHGs (see section 6.0 above). Additionally, the proposed project would be constructed in accordance with all applicable City Building and Fire Codes. Therefore, the proposed project would not result in the wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. Impacts would be less than significant.

Level of Significance

Less than significant impact.

10.7 Energy Plan Consistency

The proposed project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. The applicable energy plans for the proposed project include the *Santa Ana General Plan Conservation Element*, adopted April 2022, and the County of Orange General Plan, Chapter 6 Resources Element, September 13, 2005, that provides an Energy Resources Component. The City and County plans are analyzed separately below.

City of Santa Ana General Plan Conservation Element

The proposed project's consistency with the energy conservation policies from the City's General Plan are shown in Table N.

Table N – Proposed Project Compliance with the City General Plan Energy Policies

General Plan Policy	Proposed Project Implementation Actions
Goal CN-3: Energy Resources Reduce consumption of and reliance on nonrenewable energy, and support the development and use of renewable energy sources.	
Policy CN-3.1: Interagency Coordination. Consult with regional agencies and utility companies to pursue energy efficiency goals and expand renewable energy strategies.	Not Applicable. This policy is for the City to implement.
Policy CN-3.2: Education Programs. Support education programs to provide information on energy conservation and alternatives to nonrenewable energy sources.	Not Applicable. This policy is for the City to implement.
Policy CN-3.3: Development Patterns. Promote energy-efficient development patterns by clustering mixed use developments and compatible uses adjacent to public transportation.	Consistent. The project will provide employment opportunities in close proximity to existing residential uses and there are existing OCTA bus stops adjacent to the project site on McFadden Avenue and Grand Avenue.
Policy CN-3.4: Site Design. Encourage site planning and subdivision design that incorporates the use of renewable energy systems.	Consistent. The proposed project will include a 10,000 square foot solar PV system.
Policy CN-3.5: Landscaping. Promote and encourage the planting of native and diverse tree species to improve air quality, reduce heat island effect, reduce energy consumption, and contribute to carbon mitigation with special focus in environmental justice areas.	Consistent. The proposed Landscape Plan will be designed to include native and diverse tree species that will be located adjacent to the onsite road system as well in the proposed parking lots, in order to reduce the heat island effect and associated reduction in energy consumption.
Policy CN-3.6: Life Cycle Costs. Encourage construction and building development practices that use renewable	Consistent. The proposed project will be constructed using renewable resources based on the Title 24 Part

General Plan Policy	Proposed Project Implementation Actions
resources and life cycle costing in construction and operating decisions.	6 and Part 11 building standards that require construction materials to be reused or recycled.
Policy CN-3.7: Energy Conservation Design and Construction. Incorporate energy conservation features in the design of new construction and rehabilitation projects.	Consistent. The proposed structures will be designed to meet or exceed the 2025 Title 24 Part 6 building standards that require the incorporation of energy conservation features into the structures.
Policy CN-3.8: Energy-Efficient Public Facilities. Promote and encourage efficient use of energy and the conservation of available resources in the design, construction, maintenance, and operation of public facilities, infrastructure, and equipment.	Consistent. The proposed public facilities will be designed to meet or exceed the 2025 Title 24 Part 6 building standards that require the incorporation of energy conservation features into the structures.
Policy CN-3.9: Energy Generation in Public Facilities. Encourage and support the generation, transmission, use, and storage of locally distributed renewable energy in order to promote energy independence, efficiency, and sustainability.	Consistent. The proposed public facility will include a 10,000 square foot solar PV canopy system.
Policy CN-3.10: Energy Conservation in Public Projects. Work with businesses and contractors that use energy-efficient practices in the provision of services and equipment for City construction projects.	Not Applicable. This policy is for City construction projects.
Policy CN-3.11: Energy-Efficient Transportation Infrastructure. Continue to support public and private infrastructure for public transportation such as bus routes, rail lines, and the OC Streetcar.	Consistent. There are existing OCTA bus stops adjacent to the project site on McFadden Avenue and Grand Avenue.

Source: City of Santa Ana, 2022.

As shown in Table N, the proposed project would be consistent with the energy conservation policies from the General Plan Conservation Element. Therefore, the proposed project would not conflict with the City's plan for renewable energy or energy efficiency. Impacts would be less than significant.

County of Orange General Plan Resource Element

The proposed project's consistency with the applicable energy-related policies in the County's General Plan are shown in Table O.

Table O – Proposed Project Compliance with County General Plan Energy Policies

General Plan Energy Policy	Proposed Project Consistency with General Plan Policies
Policy 1 – Land Use To plan urban land uses with a balance of residential, industrial, commercial, and public land uses as set forth in the Land Use Element.	Consistent. The proposed project is an allowed use under the current land use designation of Industrial. In addition, the proposed project is in close proximity to existing residential and retail uses, which will reduce energy usage by reducing vehicle trips.
Policy 2 – Energy Resource Development To encourage and actively support the efficient use and optimum development of energy resources in the County consistent with sound resource management practices.	Not Applicable. This policy is only applicable for the development of energy resources. No known energy resources (i.e. oil wells or mining) exist on the project site.
Policy 3 – Energy Conservation To encourage and actively support the utilization of energy conservation measures in all new and existing structures in the County.	Consistent. The proposed project has been designed to exceed the State’s Title 24 energy efficiency standards and will incorporate several energy-efficiency design features into the project.
Policy 4 – Transportation To provide incentives for transportation system management programs and support regional public transportation programs that reduce energy consumption.	Not Applicable. This policy is only applicable to the County to develop regional transportation programs.
Policy 5 – Energy Financing To examine the benefits of local government financing programs that promote energy conservation and development through cooperative public/private efforts.	Not Applicable. This policy is only applicable to the County to develop government financing programs that promote energy conservation.
Policy 6 – Alternative Energy Systems To encourage the use of alternative energy systems and to the extent feasible, remove the regulatory barriers to their implementation.	Consistent. The proposed project will include a 10,000 square foot solar PV canopy system and will provide electric vehicle charging stations.
Policy 7 – Solar Access To support and encourage voluntary efforts to provide solar access opportunities in new developments.	Consistent. The proposed project will include a 10,000 square foot solar PV canopy system.

Source: County of Orange, 2005.

As shown in Table O, the proposed project would be consistent with all applicable energy-related policies provided in the County’s General Plan. Therefore, the proposed project would not conflict with the County’s plan for renewable energy or energy efficiency. Impacts would be less than significant.

Level of Significance

Less than significant impact.

10.8 Generation of Greenhouse Gas Emissions

The proposed project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. The proposed project is anticipated to generate GHG emissions from mobile sources area sources, energy usage, waste disposal, water usage, and construction equipment. The project’s GHG emissions have been calculated with the CalEEMod model based on the construction and operational parameters detailed above in Section 8.1. A summary of the results is shown below in Table P and the CalEEMod model run is provided in Appendix A.

Table P – Project Related Greenhouse Gas Annual Emissions

Category	Greenhouse Gas Emissions (Metric Tons per Year)			
	CO ₂	CH ₄	N ₂ O	CO ₂ e
Mobile Sources ¹	192	0.01	0.01	195
Area Sources ²	1.5	<0.01	<0.01	1.5
Energy Usage ³	260	0.02	<0.01	261
Water and Wastewater ⁴	12.0	0.27	0.01	20.0
Solid Waste ⁵	17.0	1.70	0.00	60.0
Refrigeration ⁶	--	--	--	0.02
Construction ⁷	17.0	<0.01	<0.01	17.1
Total GHG Emissions	499	2.00	0.03	555
SCAQMD Screening Threshold				3,000
Exceed Thresholds?				No

Notes:

¹ Mobile sources consist of GHG emissions from vehicles.

² Area sources consist of GHG emissions from consumer products, architectural coatings, and landscaping equipment.

³ Energy usage consists of GHG emissions from electricity and natural gas usage.

⁴ Water includes GHG emissions from electricity used for transport of water and processing of wastewater.

⁵ Waste includes the CO₂ and CH₄ emissions created from the solid waste placed in landfills.

⁶ Refrigeration includes GHG emissions from refrigerants in air conditioning units.

⁷ Construction emissions amortized over 30 years as recommended in the SCAQMD GHG Working Group on November 19, 2009.

Source: CalEEMod Version 2022.1 (see Appendix A)

The data provided in Table P shows that the proposed project would create 555 MTCO₂e per year, which would be well below the SCAQMD's screening threshold of 3,000 MTCO₂e per year. Therefore, a less than significant generation of greenhouse gas emissions would occur from development of the proposed project. Impacts would be less than significant.

Level of Significance

Less than significant impact.

10.9 Greenhouse Gas Plan Consistency

The proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing GHG emissions. As detailed above, the applicable plan for the proposed project is CARB's 2022 Scoping Plan.

The 2022 Scoping Plan identifies additional GHG reduction actions and strategies necessary to achieve the AB 1279 target of 85 percent below 1990 levels by 2045. These actions and strategies build upon those identified in the first update to the Scoping Plan (2013) and in the second update to the Scoping Plan (2017). Although a number of these measures are currently established as statewide regulations, some measures have not yet been formally proposed or adopted. It is expected that these measures or similar actions to reduce GHG emissions will be adopted as required to achieve statewide GHG emissions targets. Provided in Table Q, Consistency with the 2022 Scoping Plan, is an evaluation of applicable reduction actions/strategies by emissions source category to determine how the proposed project would be consistent with or exceed reduction actions/strategies outlined in the 2022 Scoping Plan.

Table Q – Consistency with the 2022 Scoping Plan

AB 32 GHG Inventory Sector (shown in Bold) and Scoping Plan Action	Proposed Project Consistency with Scoping Plan Actions
GHG Emissions Reductions Relative to the SB 32 Target 40% below 1990 levels by 2030.	No Conflict. As shown above in Table P, the primary GHG emissions generated by the proposed project would be from generation of electricity. SB 1020 requires that by end of 2035, 90 percent of electricity and by end of 2045 that 100 percent of electricity is generated from renewable and zero-carbon resources. In addition, the proposed project will include a 10,000 square foot solar PV canopy system that will assist in meeting this requirement. As such, the proposed project would not conflict with this strategy.
Smart Growth / Vehicle Miles Traveled (VMT) VMT per capita reduced 25% below 2019 levels by 2030, and 22% below 2019 levels by 2045.	No Conflict. As detailed in the VMT Screening Memo, the proposed project meets both the City and County VMT screening criteria. As such, the proposed project would not conflict with this strategy.
Light-Duty Vehicle (LDV) Zero-Emission Vehicles (ZEVs) 100% of LDV sales are ZEV by 2035.	Not Applicable. Executive Order N-79-20 requires all new LDVs sold in California to be zero-emission by the year 2035. The proposed project would not include any vehicle sales activities.
Truck ZEVs 100% of medium-duty (MDV)/HDC sales are ZEV by 2040 (AB 74 University of California Institute of Transportation Studies [ITS] report).	No Conflict. Executive Order N-79-20 requires all new LDVs sold in California to be zero-emission by the year 2045. Any truck deliveries to the project site during either construction or operations would be operated and maintained by outside companies that would be required to meet the State truck regulations. As such, the proposed project would not conflict with this Strategy.
Aviation 10% of aviation fuel demand is met by electricity (batteries) or hydrogen (fuel cells) in 2045. Sustainable aviation fuel meets most or the rest of the aviation fuel demand that has not already transitioned to hydrogen or batteries.	Not Applicable. The proposed project would not utilize any aviation fuel.
Ocean-going Vessels (OGV) 2020 OGV At-Berth regulation fully implemented, with most OGVs utilizing shore power by 2027. 25% of OGVs utilize hydrogen fuel cell electric technology by 2045.	Not Applicable. The proposed project would not utilize any OGVs.
Port Operations	

AB 32 GHG Inventory Sector (shown in Bold) and Scoping Plan Action	Proposed Project Consistency with Scoping Plan Actions
100% of cargo handling equipment is zero-emission by 2037. 100% of drayage trucks are zero emission by 2035.	Not Applicable. The proposed project would not impact any operations at any ports.
Freight and Passenger Rail	
100% of passenger and other locomotive sales are ZEV by 2030. 100% of line haul locomotive sales are ZEV by 2035. Line haul and passenger rail rely primarily on hydrogen fuel cell technology, and others primarily utilize electricity.	Not Applicable. The proposed project would not impact any freight or passenger rail operations.
Oil and Gas Extraction	
Phase out oil and gas extraction operations by 2045.	Not Applicable. The proposed project would not impact any oil and gas extraction activities.
Petroleum Refining	
CCS on majority of petroleum refining operations by 2030. Production reduced in line with petroleum demand.	Not Applicable. The proposed project would not impact any petroleum refining activities.
Electricity Generation	
Electric sector GHG target of 38 MMTCO ₂ e in 2030 and 31 MMTCO ₂ e in 2045. Retail sales load coverage	No Conflict. Senate Bill 1020 requires that 100 percent of retail sales of electricity be generated by renewable or zero-carbon source of electricity by December 1, 2045. In addition, the proposed project will include a 10,000 square foot solar PV canopy system that will assist in meeting this requirement. As such, the proposed project would not conflict with this strategy.
New Residential and Commercial Buildings	
All electric appliances beginning 2026 (residential) and 2029 (commercial).	Not Applicable. The proposed non-residential project would be constructed prior to 2029.
Existing Residential Buildings	
80% of appliance sales are electric by 2030 and 100% of appliance sales are electric by 2035. Appliances are replaced at end of life.	Not Applicable. The proposed project would not include any existing residential buildings.
Existing Commercial Buildings	
80% of appliance sales are electric by 2030, and 100% of appliance sales are electric by 2045. Appliances are replaced at end of life.	Not Applicable. The proposed project would not include any existing commercial buildings.
Food Products	
7.5% of energy demand electrified directly and/or indirectly by 2030; 75% by 2045.	Not Applicable. The proposed project would not include any commercial food production activities.
Construction Equipment	
25% of energy demand electrified by 2030 and 75% electrified by 2045.	No Conflict. Executive Order N-79-20 requires all off-road vehicles and equipment to transition to 100 percent zero-emission equipment, where feasible, by 2035. All construction equipment fleets utilized during construction of the proposed project are required to be registered with CARB and meet CARB's current emission reductions regulations, which are

AB 32 GHG Inventory Sector (shown in Bold) and Scoping Plan Action	Proposed Project Consistency with Scoping Plan Actions
	anticipated to be updated to meet Executive Order N-79-20 requirements. As such, the proposed project would not conflict with this strategy.
Chemicals and Allied Products; Pulp and Paper Electrify 0% of boilers by 2030 and 100% of boilers by 2045. Hydrogen for 25% of process heat by 2035 and 100% by 2045. Electrify 100% of other energy demand by 2045.	Not Applicable. The proposed project would not include any pulp and paper production activities.
Stone, Clay, Glass, and Cement CCS on 40% of operations by 2035 and on all facilities by 2045. Process emissions reduced through alternative materials and CCS.	Not Applicable. The proposed project would not include any stone, clay, glass and cement production activities.
Other Industrial Manufacturing 0% energy demand electrified by 2030 and 50% by 2045.	Not Applicable. The proposed project would be constructed prior to 2030.
Combined Heat and Power Facilities retire by 2040.	Not Applicable. The proposed project would not include any existing combined heat and power facilities.
Agriculture Energy Use 25% energy demand electrified by 2030 and 75% by 2045.	Not Applicable. The proposed project would not include any commercial agriculture activities.
Low Carbon Fuels for Transportation Biomass supply is used to produce conventional and advanced biofuels, as well as hydrogen.	Not Applicable. The proposed project would not include any production of fuels for transportation.
Low Carbon Fuels for Buildings and Industry In 2030s, renewable natural gas (RNG) blended in pipeline. Renewable hydrogen blended in natural gas pipeline at 7% energy (~20% by volume), ramping up between 2030 and 2040. In 2030s, dedicated hydrogen pipelines constructed to serve certain industrial clusters.	Not Applicable. The proposed project would not include any production of fuels for buildings and industry.
Non-combustion Methane Emissions Increase landfill and dairy digester methane capture. Some alternative manure management deployed for smaller dairies. Moderate adoption of enteric strategies by 2030. Divert 75% of organic waste from landfills by 2025. Oil and gas fugitive methane emissions reduced 50% by 2030 and further reductions as infrastructure components retire in line with reduced fossil gas demand.	Not Applicable. The proposed project would not include the operation of any landfill or dairy.
High GWP Potential Emissions	

AB 32 GHG Inventory Sector (shown in Bold) and Scoping Plan Action	Proposed Project Consistency with Scoping Plan Actions
Low GWP refrigerants introduced as building electrification increases, mitigating HFC emissions.	Not Applicable. The proposed project would not include the manufacturing of appliances that use low GWP refrigerants.
Compensate for Remaining Emissions	
Carbon Dioxide Removal (CDR) demonstration projects deployed by 2030.	Not Applicable. The proposed project would not include any CDR demonstration projects
CDR scaled to compensate for remaining GHG emissions in 2045	

Source: CARB, 2022.

As shown above in Table Q, the proposed project would not conflict with any applicable proposed action or strategy in the 2022 CARB Scoping Plan. Therefore, the proposed project would be consistent with the 2022 CARB Scoping Plan and potential impacts would be less than significant.

Level of Significance

Less than significant impact.

Table of Contents

1. Basic Project Information	
1.1. Basic Project Information	
1.2. Land Use Types	
1.3. User-Selected Emission Reduction Measures by Emissions Sector	
2. Emissions Summary	
2.1. Construction Emissions Compared Against Thresholds	
2.2. Construction Emissions by Year, Unmitigated	
2.4. Operations Emissions Compared Against Thresholds	
2.5. Operations Emissions by Sector, Unmitigated	
3. Construction Emissions Details	
3.1. Site Preparation (2026) - Unmitigated	
3.3. Grading (2026) - Unmitigated	
3.5. Building Construction (2026) - Unmitigated	
3.7. Building Construction (2027) - Unmitigated	
3.9. Paving (2027) - Unmitigated	

3.11. Architectural Coating (2027) - Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	New OC Fleet Services Facility
Construction Start Date	7/1/2026
Operational Year	2027
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.5
Precipitation (days)	19
Location	1400 S Grand Ave, Santa Ana, CA 92705, USA
County	Orange
City	Santa Ana
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	6825
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Government Office Building	20	1000sqft	0.46	20,000	1,999	—	—	—

Automobile Care Center	46	1000sqft	1.0	45,706	4,569	—	—	—
Unenclosed Parking Structure	10.0	1000sqft	0.23	10,000	998	—	—	—
Other Asphalt Surfaces	2.9	Acre	2.9	0.00	12,428	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	9.0	annual days of extreme heat
Extreme Precipitation	3.5	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	1.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi. Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi. Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure. The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	60
AQ-PM	73
AQ-DPM	72
Drinking Water	46

Lead Risk Housing	70
Pesticides	0.00
Toxic Releases	98
Traffic	94
Effect Indicators	—
CleanUp Sites	95
Groundwater	69
Haz Waste Facilities/Generators	97
Impaired Water Bodies	0.00
Solid Waste	44
Sensitive Population	—
Asthma	32
Cardio-vascular	16
Low Birth Weights	52
Socioeconomic Factor Indicators	—
Education	96
Housing	92
Linguistic	93
Poverty	92
Unemployment	7.1

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	1.360195047
Employed	30.82253304
Median HI	8.058514051

Education	—
Bachelor's or higher	1.193378673
High school enrollment	21.68612858

Hardship	99.2
Other Decision Support	—
2016 Voting	19.5

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	81
Healthy Places Index Score for Project Location (b)	9.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

- a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Healthy Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
--------	---------------

Construction: Construction Phases	No Demolition. Construction schedule extended by 1.4x to match schedule provided by applicant
Operations: Vehicle Data	500 Daily Trips, Monday thru Friday
Operations: Refrigerants	The Supermarket Refrigeration and Condensing Units were removed, since the project will not contain these units.

February 2026

SUMMARY OF FINDINGS

A reconnaissance-level biological resource survey was conducted for OC Public Works for the Grand Avenue Fleet Garage Project located on an approximately 11.55-acre site in the City of Santa Ana, Orange County, California. (Project). The Project proposes to build a new fleet service building. This will deliver vehicle management services to over 3,000 County-owned vehicles and equipment in County agencies and departments. This includes general maintenance, repair services, and managing enforcement of vehicle rules and regulations. This proposed Project will relocate and consolidate existing facilities at 445 Civic Center West and 1102 East Fruit Street to Orange County owned land allocated at 1300 South Grand Avenue, Santa Ana, CA. The new building will be adjacent to and located on the same site as the existing 1300 South Grand Avenue office buildings that house various county staff and data centers.

Two non-hydric soil types, Chino silty clay loam and Moche loam were identified onsite. Both soil series are well-drained to moderately well-drained and support no hydric indicators or conditions associated with wetland formations.

Vegetation observed on site consisted entirely of ruderal and ornamental species. These communities do not provide suitable habitat for the special status plant species. A total of 44 special status plant species were evaluated for their potential to occur on the Project. All were determined to be absent due to the lack of suitable soils, habitat features, hydrology, and/or the Project being outside of the elevation range for the species.

Wildlife species observed during the survey were typical of the habitats observed on site. No sensitive habitats or special status wildlife species were detected. Fourteen special status wildlife species were evaluated for their potential to occur on the Project site; however, all were determined to be absent due to a lack of suitable habitat (e.g., riparian corridors, scrub habitat, grassland, open water) on the Project site.

No jurisdictional waters or wetlands are present on the site. The site lacks natural hydrology, , riparian vegetation, and wetland indicators. Existing storm drains present on site are engineered structures and do not meet the criteria for jurisdictional water features.

Wildlife movement corridors are not present within or adjacent to the Project site. The area is fully urbanized and bounded by development, rail lines, and roadways, preventing any regional wildlife connectivity.

Overall, the survey concluded that the Project site does not support special status plant or wildlife species, sensitive vegetation communities, wetlands, or jurisdictional waters.

SECTION 1.0 – INTRODUCTION

Chambers Group, Inc. (Chambers Group) was retained by OC Public Works to conduct a reconnaissance-level biological resource survey for the Project to identify the vegetation communities, to document the existing biological resources, and to assess the habitats on the site for their potential to support special status plant and wildlife species.

1.1 PROJECT LOCATION

The approximately 11.55-acre Project site is located at 1400 South Grand Avenue in the City of Santa Ana on two lots. The Fleet Services Facility address is proposed as 1310 South Grand Avenue, and the Facility Operations Building would be as 1324 South Grand Avenue. The Project is located within the Tustin U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle in Sections 18 and 19 of Township 05 South, Range 09 West. The Project site elevation ranges from 90 to 98 feet above mean sea level (amsl).

Surrounding the Project site is residential, commercial, and industrial uses. Vegetation within the Project site is largely ornamental and landscaped rather than intact native vegetation. Soils on site range from loam to silty clay loam. The surrounding landscape includes coastal plain that rises toward the foothills of the Santa Ana Mountains and the historic alluvial drainage system. The Project site is located approximately 3.4 miles east of the Santa Ana River.

A map depicting the Project location and vicinity is included as Figure 1: Project Location and Vicinity.

1.2 SURVEY AREA

The survey area includes approximately 6.53 acres of non-native, ornamental, ruderal vegetation within the approximately 11.55-acre Project site. Railroad tracks border the Project site to the west. To the north of the project site is a grade school. To the east is the OC veterans service office, OC register voters, OC publishing services, and parking lots. To the south of the project site are industrial buildings. Figure 2 shows a descriptive area visual of the survey area.

SECTION 2.0 – METHODS

2.1 LITERATURE REVIEW

Chambers Group conducted database searches to determine which species are known to occur within the Project vicinity. The most recent records of the California Natural Diversity Database (CNDDDB 2025) and the California Native Plant Society Electronic Inventory of Rare and Endangered Vascular Plants of California (CNPS 2025) were reviewed for the quadrangles containing and surrounding the project site (Tustin, El Toro, Black Star Canyon, Orange, Anaheim, Newport Beach, Laguna Beach, and San Juan Capistrano). The databases were reviewed for the 8 quads because the 9-quad search enters the Pacific Ocean. These databases contain records of reported occurrences of federal- and state-listed endangered or threatened or proposed endangered or threatened species, California Species of Special Concern (SSC), and otherwise special status species or habitats that may occur within or in the immediate vicinity of the Project site. (Figure 3) A list of special status plant and wildlife species potentially occurring within the project site was developed from the database searches.

2.1.1 Soils

Prior to conducting the surveys, soil maps from the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey (USDA 2025) was reviewed for soil types found within the Project footprint area for Orange County. Soil maps for Orange County were referenced online to determine the types of soil found within the Survey Area. Soils were determined in accordance with categories set forth by the United States Department of Agriculture (USDA) Soil Conservation Service and by referencing the USDA Natural Resources Conservation Service (NRCS) Web Soil Survey (USDA 2025).

2.1.2 Wildlife Movement Corridors

Prior to conducting the surveys, aerial photographs were reviewed to identify potential wildlife corridors within or immediately adjacent to the Project site.

2.1.3 Critical Habitat

Prior to conducting the survey, U.S. Fish and Wildlife Service (USFWS) and CNDDDB was reviewed to determine whether any federally designated critical habitat occurs within or in the immediate vicinity of the Project site.

2.2 RECONNAISSANCE-LEVEL FIELD SURVEY

Chambers Group Biologists Corey Jacobs and Alisa Hernandez conducted a reconnaissance survey to identify the potential for occurrence of special status plant and wildlife species and habitats that could support special status wildlife species within the Survey Area. All vegetation communities observed within the Survey Area were recorded (Figure 4). The survey was conducted on foot on October 28, 2025. Photographs of the Survey Area were taken to document current site conditions (Appendix B).

Biological resources on the Project site were inventoried and the potential for occurrence of special status plant and wildlife species, including species listed as threatened or endangered, and special status habitats were assessed. Qualitative observations were made of habitat types onsite, including soil and vegetation

types. In addition, a reconnaissance-level jurisdictional waters assessment was conducted. Notes were made on general vegetation types, species observed, and special status habitats existing on the property.

2.2.1 Vegetation

Vegetation communities on the property were identified and qualitatively described. Vegetation communities were determined in accordance with the categories set forth in Barbour et al. (1999) and Gray and Bramlet (1992).

Plants of uncertain identity were collected and subsequently identified from keys, descriptions, and illustrations in Hickman (1993) and Munz (1974). Plant nomenclature follows that of *The Jepson Manual, Higher Plants of California, Second Edition* (Baldwin et al. 2009). A list of plant species observed during the survey is presented as Attachment A.

2.2.2 Wildlife

The distribution and relative abundance of wildlife, wildlife resources, and wildlife habitats within the Project site were characterized. Wildlife and wildlife sign (including tracks, scat, carcasses, burrows, nests, excavations, and vocalizations) were noted and recorded. A list of wildlife species observed during the Project site visit is included as Attachment B.

2.2.3 Special Status Species

The following list of abbreviations was used in the identification of biologically special status resources potentially occurring within the Project site.

Federal

FE	=	Federally listed; Endangered
FT	=	Federally listed; Threatened
FC	=	Federal Candidate for listing

State

ST	=	State listed; Threatened
SE	=	State listed; Endangered
RARE	=	State-listed; Rare (Listed "Rare" animals have been re-designated as Threatened, but Rare plants have retained the Rare designation.)
SSC	=	State Species of Special Concern
WL	=	CDFW Watch List

California Rare Plant Rank (CRPR)

1A	=	Plants presumed extirpated in California and either rare or extinct elsewhere.
1B	=	Plants rare, threatened, or endangered in California and elsewhere.
2A	=	Plants presumed extirpated in California but common elsewhere.
2B	=	Plants rare, threatened, or endangered in California but more common elsewhere in their range.

Plants with a CRPR of a 3 or 4 are not included as they are not afforded protections under CEQA.

CRPR Extensions

- 0.1 = Seriously threatened in California (greater than 80 percent of occurrences threatened/high degree and immediacy of threat).
- 0.2 = Moderately threatened in California (20 to 80 percent occurrences threatened/moderate degree and immediacy of threat).
- 0.3 = Not very threatened in California (less than 20 percent of occurrences threatened/low degree and immediacy of threat or no current threats known).

The potential for occurrence of special status plants and wildlife was evaluated through a literature review and visit to the property. Special status plant and animal species include all federal- and state-listed endangered and threatened species. A special status species was considered a potential inhabitant of the Project site if general habitat requirements of the species were present (such as the presence of roosting, nesting, or foraging habitat, or a permanent water source) and/or its known geographical distribution encompassed or was adjacent to part of the project site. All habitat types on the site were visited on foot, and the probability for special-status plants to occur onsite was evaluated.

Factors used to determine the potential for occurrence included the quality of habitat, elevation, and the results of reconnaissance survey. In addition, the location of prior CNDDDB records of occurrence were used as additional data, but because the CNDDDB is a positive-sighting database, these data were used only in support of the analysis from the previously identified factors. The “potential for occurrence” ranking is based on the criteria presented in Table 1 below.

Table 1: Criteria for Evaluating Special Status Species Potential for Occurrence

PFO*	CRITERIA
Absent:	Species is restricted to habitats or environmental conditions that do not occur within the Project site.
Low:	Historical records for this species do not exist within the vicinity (approximately 5 miles) of the Project site, and/or habitats or environmental conditions needed to support the species are of poor quality.
Moderate:	Either a historical record exists of the species within the vicinity of the Project site (approximately 5 miles) and marginal habitat exists on the Project site, or the habitat requirements or environmental conditions associated with the species occur within the Project site, but no historical records exist within 5 miles of the Project site.
High:	Both a historical record exists of the species within the Project site or its immediate vicinity (approximately 1 mile), and the habitat requirements and environmental conditions associated with the species occur within the Project site.
Present:	Species were detected within the Project site at the time of the survey.

*PFO: Potential for Occurrence

Location information on some special status species is not available; therefore, for survey purposes, landscape factors associated with species occurrence requirements may be considered sufficient to give a species a positive potential for occurrence.

2.2.4 Jurisdictional Waters Assessment

A general assessment of jurisdictional waters regulated by the United States Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB), and CDFW was conducted for the proposed Survey Area. Pursuant to Section 404 of the Clean Water Act, USACE regulates the discharge of dredged and/or fill material into waters of the United States. The State of California (State) regulates discharge of material into waters of the State pursuant to Section 401 of the Clean Water Act and the California Porter-Cologne Water Quality Control Act (California Water Code, Division 7, §13000 et seq.). Pursuant to Division 2, Chapter 6, Sections 1600-1602 of the California Fish and Game Code, CDFW regulates all diversions, obstructions, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake, which supports fish or wildlife. The assessment was conducted by a desktop survey through the USGS National Hydrography Dataset for hydrological connectivity. In addition, USFWS National Wetlands Inventory (NWI) Maps were referenced to determine potential wetland or other water features occurring within the Survey Area. The assessment was also conducted in the field. Biologists walked the entire Canyon creek within the Survey Area. Suspected jurisdictional areas were field checked for the presence of riparian vegetation, definable channels, definable bed and bank, and Ordinary High Water Marks (OHWMs). The lateral extent of each jurisdictional water feature was measured to the outer edge of riparian vegetation as the line of demarcation between riparian and upland habitats, top of bank to top of bank, or by OHWM.

Vegetation Communities

SECTION 3.0 – RESULTS

The reconnaissance survey was conducted on October 28, 2025, by Chambers Group biologists Corey Jacobs and Alisa Hernandez between the hours of 0700 and 1300. Temperature in the morning was 61 degrees Fahrenheit (°F) with 1 to 3 miles per hour (mph) winds and clear skies. The weather at the end of the survey was 77 °F with winds up to 9 mph and no clouds.

3.1 SOILS

Two soil types occur within the Project site. These soil types are within the Chino and Mocho soil series (USDA 2025). Descriptions of each soil type are listed below and are included in Figure 5.

Chino silty clay loam, drained occurs through the western half of the Project site. They are somewhat poorly drained soils typically found in linear positions at elevations from 30 to 750 feet above mean sea level (amsl). The soil profiles are composed of silty clay loam derived from sedimentary rock. These soils are not hydric and have moderately high permeability, resulting in low runoff. The soil is more than 80 inches to bedrock.

Mocho loam, 0 to 2 percent slopes, warm MAAT, MLRA 19, occur on the eastern majority of the Project site. They are well drained soils typically found in linear positions at elevations from 20 to 1,920 feet amsl. These soil profiles are typically composed of loam, derived from sedimentary rock. These soils are not hydric and typically have moderately high to high permeability, with low runoff when wet. The soil is more than 80 inches to bedrock.

3.2 VEGETATION

The dominant vegetation community within the Project site is ruderal, with small patches of ornamental vegetation along the perimeters that has established within the Project site. All vegetation communities identified on the Project site are shown in Figure 4. The following sections summarize the principal characteristics of the vegetation communities and general locations of these communities within the Project site. A list of plant species that were observed during the survey is presented as Appendix B.

3.2.1 Vegetation Communities

Ruderal

Areas classified as Ruderal tend to be dominated by pioneering herbaceous species that readily colonize disturbed ground and that are often found in temporary, often frequently disturbed habitats (Barbour et al. 1999). The soils in ruderal areas are typically characterized as heavily compacted or frequently disturbed. The vegetation in these areas is adapted to living in compact soils where water does not readily penetrate the soil. Often, Ruderal areas are dominated by species of the *Centaurea*, *Brassica*, *Malva*, *Salsola*, *Eremocarpus*, *Amaranthus*, and *Atriplex* genera.

Areas with Ruderal vegetation are present within the southwestern field and north-south extending section between the buildings of the Project site. Ruderal plant species found on the Project site include:

Bermuda grass (*Cynodon dactylon*), cheeseweed (*Malva parviflora*), Russian thistle (*Salsola australis*), and Johnsongrass (*Sorghum halepense*). There are 5.92 acres of Ruderal Vegetation on the Project site.

Ornamental Landscaping

Ornamental Landscaping includes areas where the vegetation is dominated by non-native horticultural plants (Gray and Bramlet 1992). Typically, the species composition consists of introduced trees, shrubs, flowers, and turf grass.

Ornamental Landscaping is present within the Project perimeters to the south, east, and northwestern sections of the Project site. Plant species found on the Project site typical of this community include: silk floss tree (*Ceiba speciosa*), star jasmine (*Trachelospermum jasminoides*), pomegranate (*Punica granatum*), bougainvillea (*Bougainvillea* sp.), carrotwood (*Cupaniopsis anacardioides*). There is 0.61 acre of Ornamental Landscaping on the Project site.

Developed

Developed areas are areas that have been altered by humans and now display man-made structures such as houses, paved roads, buildings, parking lots, and other maintained areas.

Developed areas are present within the Project site and make up approximately 4.99 acres. Developed areas of the Project site include two asphalt roads entrances, one off Grand Ave on the east side of the Project site and the other off McFadden Ave on the north side of the Project site. Butting up against the Ruderal community is a developed parking lot to the east.

3.2.2 Special Status Plants

The database searches (CNDDDB 2025, CNPS 2025) literature reviews resulted in a list of 44 special status plant species with a potential to occur on or within the vicinity of the Project site based on habitat present and a 5 mile radius of the Project site. Ten of these 44 special status plant species are federal- and/or state-listed as endangered or threatened. The current listing status including the federal (F) and state (S) listing as threatened (T) or endangered (E) and the California Rare Plant Rank (CRPR) for each species is provided after their scientific names.

The following 26 species are considered **absent** from the proposed Project site due to lack of suitable habitat, lack of suitable soil types and/or typically occur outside the elevation range on site:

- *Abronia villosa* var. *aurita* (chaparral sand-verbena) – 1B.1
- *Allium marvinii* (Yucaipa onion) – 1B.2
- *Aphanisma blitoides* (aphanisma) – 1B.2
- *Astragalus hornii* var. *hornii* (Horn's milk-vetch) – 1B.1
- *Atriplex pacifica* (south coast saltscale) – 1B.2
- *Atriplex parishii* (Parish's brittlescale) – 1B.1
- *Atriplex serenana* var. *davidsonii* (Davidson's saltscale) – 1B.2
- *Baccharis malibuensis* (Malibu Baccharis) – 1B.1

- *Chaenactis glabriuscula* var. *orcuttiana* (Orcutt's pincushion) – 1.B1
- *Chloropyron maritimum* subsp. *maritimum* (salt marsh bird's beak) – CE, FE, 1B.2
- *Chorizanthe parryi* var. *fernandina* (San Fernando Valley spineflower) – CE, 1B.1
- *Eryngium aristulatum* var. *parishii* (San Diego button-celery) – CE, FE, 1B.1
- *Euphorbia misera* (cliff spurge) – 2B.2
- *Helianthus nuttallii* subsp. *parishii* (Los Angeles sunflower) – 1A
- *Hesperocyparis forbesii* (Tecate cypress) – 1B.1
- *Horkelia cuneata* var. *puberula* (mesa morkelia) – 1.B1
- *Monardella hypoleuca* subsp. *intermedia* (intermediate monardella) – 1B.3
- *Nama stenocarpa* (mud nama) – 2B.2
- *Nemacaulis denudata* var. *denudata* (coast woolly-heads) – 1B.2
- *Nolina cismontana* (chaparral nolina) – 1B.2
- *Orcuttia californica* (California Orcutt grass) – CE, FE, 1B.1
- *Penstemon californicus* (California beardtongue) – 1B.2
- *Pseudognaphalium leucocephalum* (white rabbit-tobacco) – 2B.2
- *Senecio aphanactis* (chaparral ragwort) – 1B.2
- *Suaeda esteroa* (estuary seablite) – 1B.2
- *Verbesina dissita* (big-leaved crownbeard) – CT, FT, 1B.1

The following 12 species can occur in disturbed, meadow and grassland habitat, but are considered **absent** from the proposed Project site due to level of repeated disturbance in the area and because they were not observed on site:

- *Astragalus brauntonii* (Braunton's milk-vetch) – FE, 1B.1
- *Atriplex coulteri* (Coulter's saltbush) – 1B.2
- *Brodiaea filifolia* (thread-leaved brodiaea) – CE, FT, 1B.1
- *Centromadia parryi* subsp. *australis* (southern tarplant) – 1B.1
- *Chorizanthe polygonoides* var. *longispina* (long-spined spineflower) – 1B.2
- *Comarostaphylis diversifolia* subsp. *diversifolia* (summer holly) – 1B.2
- *Dudleya multicaulis* (many-stemmed dudleya) – 1B.2
- *Eriastrum densifolium* subsp. *sanctorum* (Santa Ana River woollystar) – CE, FE, 1B.1
- *Isocoma menziesii* var. *decumbens* (decumbent goldenbush) – 1B.2
- *Lepechinia cardiophylla* (heart-leaved pitcher sage) – 1B.2
- *Navarretia prostrata* (prostrate vernal pool navarretia) – 1B.2
- *Pentachaeta aurea* subsp. *allenii* (Allen's pentachaeta) – 1B.1

The following 6 species are presumed to be extirpated, and are **absent** from the proposed Project site because there is a lack of suitable habitat, depleted seed bank in the surrounding area, recent records are greater than 5 miles away from the proposed Project site and/or are more than 40 years old:

- *Calochortus weedii* var. *intermedius* (intermediate mariposa-lily) – 1B.2
- *Dudleya stolonifera* (Laguna Beach dudleya) – CT, FT, 1B.1
- *Lasthenia glabrata* subsp. *coulteri* (Coulter's goldfields) – 1B.1
- *Nasturtium gambelii* (Gambel's water cress) – CE, FT, 1B.1
- *Sidalcea neomexicana* (salt spring checkerbloom) – 2B.2
- *Symphotrichum defoliatum* (San Bernadino aster) – 1B.2

Of the 44 special status plant species evaluated for their potential occurrence on the Project site, all 44 species are considered to be absent from the site.

3.3 WILDLIFE

The following paragraphs describe the wildlife species observed or otherwise detected on or in the vicinity of the site during the reconnaissance-level survey. Wildlife detections or signs included those for birds, mammals, and reptiles. Species observed on the site are common in developed areas and ruderal vegetation. The list of wildlife observed and/or detected is provided in Appendix C.

3.3.1 Reptiles

One reptile species, western fence lizard (*Sceloporus occidentalis longipes*), was observed during the survey. Special status species are discussed further in Section 4.2 below.

3.3.2 Birds

Six avian species were observed or otherwise detected during the survey. These species included American crow (*Corvus brachyrhynchos*), common poorwill (*Phalaenoptilus nuttallii*), house finch (*Haemorrhous mexicanus*), black phoebe (*Sayornis nigricans*), Say's phoebe (*Sayornis saya*), and yellow-rumped warbler (*Setophaga coronata*).

3.3.3 Mammals

One mammal species, California ground squirrel (*Otospermophilus beecheyi*), was observed during the survey.

3.3.4 Special Status Wildlife

The database searches (CNDDDB 2025, USFWS 2025) resulted in a list of 14 special status wildlife species with a potential to occur on or within the vicinity of the Project site. Fourteen of the special status wildlife species are federal- and/or state-listed as endangered or threatened, federally proposed threatened, or state candidate endangered. These special status wildlife species, their current status, their habitat requirements, and potential for occurrence are summarized in Appendix D.

Of the 14 special status wildlife species evaluated for their potential occurrence on the Project site 1 species has a low potential to occur and 14 species are considered to be absent from the site. The current listing status including the federal (F) and state (S) listing as threatened (T) or endangered (E) and the Species of Special Concern (SSC) for each species is provided after their scientific names. These 14 species and their special status are listed below.

The following six species are considered absent because of the highly developed, urbanized conditions of the Project site and lack of native vegetation or natural habitat:

- **American Peregrine Falcon** (*Falco peregrinus anatum*) – Federal and State Delisted
- **Coastal California Gnatcatcher** (*Polioptila californica californica*) – FT, SSC
- **Coastal Cactus Wren** (*Campylorhynchus brunneicapillus sandiegensis*) – SSC (San Diego and Orange Counties)
- **Least Bell's Vireo** (*Vireo bellii pusillus*) – FE, SE

- **Western Yellow-Billed Cuckoo** (*Coccyzus americanus occidentalis*) – FT, SE
- **White-Tailed Kite** (*Elanus leucurus*) – FP

The following three species are considered absent because the Project site lacks required hydrological features such as streams, rivers, riparian corridors, or standing freshwater habitats:

- **California Black Rail** (*Laterallus jamaicensis coturniculus*) – ST
- **Coastal Rainbow Trout (Southern Steelhead)** (*Oncorhynchus mykiss irideus*) – FE, Candidate SE
- **Southwestern Pond Turtle** (*Actinemys pallida*) – FT, SSC

The following two species are considered absent because it lacks the appropriate soil conditions, host plants, or specific habitat features required for the species are not present:

- **Coast Horned Lizard** (*Phrynosoma blainvillii*) – SSC
- **Crotch's Bumble Bee** (*Bombus crotchii*) – Candidate SE

The following two species are considered absent because the Project site lacks roosting, foraging, or structural habitat needed by the species.

- **Mexican Long-Tongued Bat** (*Choeronycteris mexicana*) – SSC
- **Western mastiff bat** (*Eumops perotis californicus*) – SSC

One species has a low potential to occur because the site contains minimal marginal habitat features such as small debris piles, landscape outside of the Project site boundaries to provide foraging opportunities. There are ground squirrel burrows on site but they are active with squirrels and in poor habitat for a burrowing owl to occupy.

- **Burrowing Owl** (*Athene cunicularia*) – SSC, CESA Candidate

3.4 WILDLIFE MOVEMENT CORRIDORS

The Project site does not function as a wildlife movement corridor. The surrounding area is highly urbanized and fragmented, bordered by train tracks, residential developments, schools, and commercial businesses. These existing barriers substantially limit wildlife movement and connectivity. As a result, the site does not provide a continuous or viable pathway for wildlife species to travel between habitat areas.

3.5 CRITICAL HABITAT

The USFWS designates critical habitat for the coastal California gnatcatcher approximately 4.7 miles from the Project site. However, no suitable habitat for coastal California gnatcatcher occurs within or adjacent to the Project site due to the highly developed and urbanized condition surrounding the area. No impacts to USFWS critical habitat will occur as a result of the Project.

NHD and NWI

3.6 JURISDICTIONAL WATERS ASSESSMENT

Pursuant to Section 404 of the Clean Water Act, the USACE regulates the discharge of dredged and/or fill material into waters of the United States. Waters of the United States include navigable waterways and wetlands adjacent to navigable waterways, non-navigable waterways, and wetlands adjacent to non-navigable waters that are contiguous with navigable waterways.

The State of California regulates discharge of dredged and/or fill material into waters of the State pursuant to Section 401 of the Clean Water Act. The RWQCB asserts jurisdiction to all those areas defined as jurisdictional under Section 404 of the Clean Water Act, plus isolated waters. As a State agency, the State Water Resources Control Board (SWRCB) regulates all waters of the State, including isolated wetlands as identified in the California Porter-Cologne Water Quality Control Act (Porter Cologne; Ca. Water Code, Div. 7, §13000 et seq.).

Jurisdictional authority of the CDFW over waters is established under Section 1600 of the Fish and Game Code, which pertains to activities that would disrupt the natural flow or alter the channel, bed, or bank of any lake, river, or stream. The Fish and Game Code stipulates that it is unlawful to substantially divert or obstruct the natural flow or substantially change the bed, channel or bank of any river, stream, or lake without notifying the CDFG, incorporating necessary mitigation, and obtaining a Streambed Alteration agreement. In addition, CDFW does not have jurisdiction over wetlands, but has jurisdiction to protect against a net loss of wetlands. CDFW supports the wetland criteria recognized by USFWS; one indicator of wetland conditions must exist for wetlands conditions to be considered present.

The Project site does not contain any potential jurisdictional waters or wetlands. The entire site is developed and lacks any natural drainages, washes, or evidence of an ordinary high-water mark (OHWM). No surface hydrology features, such as channels, culverts, or depressions that would support hydric conditions were observed during the site visit. On October 28, 2025, the site was inspected for potential waterways or jurisdictional features. No dry streambeds, defined channels, or evidence of fluvial processes were present. Vegetation across the site consisted primarily of developed and non-native landscape typical of urbanized areas. No wetland indicator vegetation, hydric soils, or wetland hydrology indicators were identified. Because no aquatic resources or wetland features were observed, a formal jurisdictional delineation is not warranted at this time. Two concrete storm drains occur along the southern entrance road. This feature is an engineered structure designed to convey site runoff and does not exhibit characteristics of a natural watercourse (no OHWM, bed, or bank). Therefore, it is not considered a jurisdictional water feature under section 404 of the Clean Water Act or section 1602 of the California Fish and Game code.

SECTION 5.0 – CONCLUSIONS AND RECOMMENDATIONS

This section summarizes the findings of the biological surveys and provides recommendations for the Project site.

5.1 SPECIAL STATUS PLANTS

The CNDDDB and CNPSEI literature review resulted in a list of 44 special status plant species that have potential to occur on the Project site. Of the 44 special status plants that were evaluated for their potential occurrence onsite, there were no species that have a potential for occurrence.

Therefore, focused surveys are not required, for any special status plant species identified during the literature review on the proposed Project site.

5.2 SPECIAL STATUS WILDLIFE

Of the 14 special status wildlife species evaluated for their potential occurrence on the Project site, one has a low potential for occurrence, none have a moderate potential, and none have a high potential. The remaining 13 are absent from the site based on the lack of suitable habitat features such as riparian corridors, sage scrub, grassland, and open water. Wildlife observed onsite consisted exclusively of common urban-adapted species. No focused surveys or additional wildlife assessments are recommended.

5.3 SPECIAL STATUS HABITATS

The Project site does not contain hydrological features associated with a definable channel or wetland, pursuant to Section 404 of the Clean Water Act or Section 1603 of the CDFG code. Therefore, no ACOE or CDFG jurisdiction was identified onsite.

5.3.1 USACE and CDFW Preliminary Jurisdictional Assessment

Although the Project site is fully developed and does not contain any natural drainage or jurisdictional waters, to minimize potential stormwater impacts, Best Management Practices (BMPs) should be implemented around all storm drain inlets to prevent sediment, debris, or pollutants from entering the stormwater system during and after construction. Recommended measures include installing fiber rolls, sandbag barriers, or inlet protection devices at storm drain openings, maintaining perimeter controls around disturbed soil areas, and conducting regular inspections and street sweeping during active construction.

5.3.2 Wildlife Movement Corridors

The Project site is surrounded by dense urban development, rail lines, roadways, and commercial buildings. No wildlife corridors or habitat linkages occur onsite or in the immediate vicinity, and project construction will not impede wildlife movement.

APPENDIX B – PLANT SPECIES OBSERVED

APPENDIX B: PLANT SPECIES OBSERVED

Scientific Name	Common Name
ANGIOSPERMS (EUDICOTS)	
ANACARDIACEAE	SUMAC OR CASHEW FAMILY
<i>Schinus terebinthifolia</i> *	Brazilian pepper tree
APOCYNACEAE	DOGBANE FAMILY
<i>Araujia sericifera</i> *	bladder flower
<i>Trachelospermum jasminoides</i> *	star jasmine
ASTERACEAE	SUNFLOWER FAMILY
<i>Erigeron bonariensis</i> *	flax-leaved horseweed
<i>Lactuca serriola</i> *	prickly lettuce
BOMBACACEAE	BOMBAX FAMILY
<i>Chorisia speciosa</i> *	floss-silk tree
BRASSICACEAE	MUSTARD FAMILY
<i>Brassica nigra</i> *	black mustard
CHENOPODIACEAE	GOOSEFOOT FAMILY
<i>Atriplex semibaccata</i> *	Australian saltbush
<i>Salsola tragus</i> *	Russian thistle
FABACEAE	LEGUME FAMILY
<i>Albizia lophantha</i> *	plume acacia
GERANIACEAE	GERANIUM FAMILY
<i>Erodium</i> sp.*	erodium
MALVACEAE	MALLOW FAMILY
<i>Malva parviflora</i> *	cheeseweed
NYCTAGINACEAE	FOUR O'CLOCK FAMILY
<i>Bougainvillea</i> sp.*	bougainvillea
POLYGONACEAE	BUCKWHEAT FAMILY
<i>Polygonum aviculare</i> subsp. <i>aviculare</i> *	common knotweed
<i>Rumex</i> sp.*	dock
PUNICACEAE	POMEGRANATE FAMILY
<i>Punica granatum</i> +	pomegranate
SAPINDACEAE	SOAPBERRY FAMILY
<i>Cupaniopsis anacardioides</i> *	carrotwood
TAMARICACEAE	TAMARISK FAMILY
<i>Tamarix gallica</i> *	French tamarisk/salt-cedar
ANGIOSPERMS (MONOCOTS)	
ARECACEAE	PALM FAMILY
<i>Washingtonia robusta</i> *	Mexican fan palm
POACEAE	GRASS FAMILY
<i>Avena barbata</i> *	slender wild oat

<i>Cynodon dactylon</i> *	Bermuda grass
<i>Ehrharta erecta</i> *	panic veldt grass
<i>Sorghum halepense</i> *	Johnsongrass
<i>Stipa miliacea</i> var. <i>miliacea</i> *	smilo grass

*Non-Native Species, +Ornamental, Unlikely to be Invasive

APPENDIX C – WILDLIFE SPECIES OBSERVED

APPENDIX C: WILDLIFE SPECIES OBSERVED OR DETECTED

Scientific Name	Common Name
CLASS AVES	BIRDS
CORVIDAE	JAYS & CROWS
<i>Corvus brachyrhynchos</i>	American crow
CAPRIMULGIDAE	NIGHTJARS
<i>Phalaenoptilus nuttallii</i>	common poorwill
FRINGILLIDAE	TRUE FINCHES
<i>Haemorhous mexicanus</i>	house finch
TYRANNIDAE	TYRANT FLYCATCHERS
<i>Sayornis nigricans</i>	black phoebe
<i>Sayornis saya</i>	Say's phoebe
PARULIDAE	NEW WORLD WARBLERS
<i>Setophaga coronata</i>	yellow-rumped warbler

<i>Sceloporus occidentalis longipes</i>	western fence lizard
CLASS MAMMALIA	MAMMALS
SCIURIDAE	SQUIRRELS
<i>Otospermophilus beecheyi</i>	California ground squirrel

APPENDIX D – WILDLIFE POTENTIAL FOR OCCURRENCE

APPENDIX D – SPECIAL STATUS WILDLIFE SPECIES POTENTIAL FOR OCCURRENCE

Common Name (<i>Scientific Name</i>)	Status: Federal/State/Other	Habitat and Distribution	Potential to Occur
CLASS INSECTA			
Crotch's bumble bee (<i>Bombus crotchii</i>)	Candidate SE	Primarily occurs in coastal southern California in grassland and scrub habitat. Nests underground in abandoned rodent dens. Diet includes lupines, phacelias, milkweeds, sages, and more.	Absent. The site does not support native vegetation.
CLASS OSTEICHTHYES			
steelhead - southern California DPS (<i>Onorhynchus mykiss irideus</i> pop.10)	FE, SE	Found in the Coast Ranges from Point Conception south to the Mexican border. Spawns in cool, clear, well-oxygenated streams. They migrate from marine environments into freshwater streams and rivers to mate and spawn. Diet consists of terrestrial insects, invertebrates and their own young as well.	Absent. Due to a lack of suitable habitat (i.e., stream) within the Survey Area.
CLASS REPTILIA			
coast horned lizard (<i>Phrynosoma blainvillii</i>)	SSC	Found in many habitats, including oak woodlands, chaparral, coastal sage scrub, grasslands, valleys, foothills, riparian wetlands, conifer forests, and semiarid mountains at elevations up to 8,000 feet amsl. It inhabits sandy washes or areas with loose, fine, sandy soils for burying, low brush for cover, and open areas for basking. It feeds primarily on harvester ants and other native ant species.	Absent. Due to lack of suitable habitat within the Survey Area and no recent occurrences within its home range. No wildlife corridors where this animal could make it to the site.

Common Name (<i>Scientific Name</i>)	Status: Federal/State/Other	Habitat and Distribution	Potential to Occur
southwestern pond turtle (<i>Actinemys pallida</i>)	Proposed FT, SSC	Inhabits permanent or nearly permanent bodies of water in ponds, marshes, rivers, and streams that typically have a rocky or muddy bottom and extensive aquatic vegetation along water body margins. Requires basking sites such as partially submerged logs, vegetation mats, or open mud banks for thermoregulation. While it is considered aquatic, it leaves the water to reproduce, estivate, and overwinter.	Absent. Due to a lack of suitable habitat within the Survey Area and no wildlife corridors where this animal could make it to the site.
CLASS AVES			
coastal cactus wren (<i>Campylorhynchus brunneicapillus sandiegensis</i>)	SSC	Found on westward drainage slopes in southern California south into Mexico. Preferred habitat includes coastal sage scrub interlaced with patches of opuntia cactus, which it uses almost exclusively for the construction of nests. Primarily insectivorous, foraging on the ground and in vegetation for caterpillars, moths, and grasshoppers along with seeds and cactus fruits.	Absent. Due to the lack of suitable habitat within the survey area and no recent occurrences within its range
coastal California gnatcatcher (<i>Polioptila californica californica</i>)	FT, SSC	An obligate, permanent resident of coastal sage scrub below 2,500 feet in elevation in Southern California. Found in low, coastal sage scrub in arid washes, on mesas and slopes. Not all areas classified as coastal sage scrub are occupied.	Absent. Due to lack of suitable habitat within the survey area and no recent occurrences within the site. no home range nearby for any chance of this species ending up on site.
least Bell's vireo (<i>Vireo bellii pusillus</i>)	FE, SE (nesting)	Occurs in early-successional habitats along rivers with low, dense vegetation. Diet consists of insects and spiders. Requires densely vegetated riparian habitat along streams and rivers for nesting.	Absent. Due to lack of any habitat on or near the site.

Common Name (<i>Scientific Name</i>)	Status: Federal/State/Other	Habitat and Distribution	Potential to Occur
Burrowing owl (<i>athene cunicularia</i>)	SSC, CESA Candidate	occurs throughout open grasslands, deserts, agricultural areas, and disturbed sites with sparse vegetation across western North America and parts of Florida. The species relies on underground burrows, often created by ground squirrels or other fossorial mammals, for nesting and roosting.	Low. As this species has been observed 4.32 miles from the site and there is Ground squirrel burrows on site; however, low quality habitat is present within the site.
white-tailed kite (<i>Elanus leucurus</i>)	FP	Inhabits open, savanna, or grassland areas with scattered trees or tall shrubs for nesting and perching, including agricultural fields, marshes, and riparian corridors adjacent to open spaces.	Absent. Due to no suitable habitat for nesting or foraging.
California black rail (<i>laterallus jamaicensis coturniculus</i>)	ST	This secretive species inhabits freshwater and brackish marshes with dense, low-growing vegetation and shallow water or saturated soils. It requires stable hydrologic conditions and dense cover for foraging and nesting.	Absent. Due to lack of suitable habitat Last known occurrence was in 1896.
Western yellow-billed cuckoo	FT, SE	Breeds in riparian woodlands along rivers and streams in the western United States, particularly where mature cottonwood and willow forests are present. It winters in South America, migrating north each spring. In California, it primarily occurs along the Sacramento, Kern, and Colorado rivers and other large riparian corridors with dense canopy cover and abundant insect prey.	Absent. Due to lack of suitable habitat with no mature cottonwood-willow vegetation required for nesting. Last location was 0.2 miles away in 1918.

Common Name (<i>Scientific Name</i>)	Status: Federal/State/Other	Habitat and Distribution	Potential to Occur
CLASS MAMMILIA			
Mexican long-tongued bat (<i>falco peregrinus anatum</i>)	SSC	In California, it is primarily found in the southern portions of the state, particularly in desert and foothill regions. This nectar- and pollen-feeding species typically inhabits arid and semi-arid environments with agave, yucca, and flowering cacti, and it roosts in caves, mines, rock crevices, and occasionally buildings.	Absent. Due to a lack of suitable habitat and food within the Survey Area and there are no recent occurrences. One male was collected 1.02 miles away in 1995. This project site is outside of its home range.
western mastiff bat (<i>Eumops perotis californicus</i>)	SSC	Permanent resident in southern California, southern Arizona, Texas, and south to South America. It is the largest bat species in North America with a wingspan approaching two feet. Roosts in small colonies or singly on cliff faces, large boulders, and exfoliating rock surfaces. It is less commonly found in artificial structures such as buildings and roof tiles. Found in a wide variety of habitats including desert scrub, chaparral, woodlands, floodplains, and grasslands. Nursery roosts described as tight rock crevices at least 35 in deep and 2 in wide, or crevices in buildings. Nocturnal foraging range may exceed 15 mi from roost sites	Absent. Due to a lack of suitable habitat within the Survey Area and there are no recent occurrences.

APPENDIX C – CULTURAL RESOURCES SURVEY LETTER REPORT

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

Subject: Cultural Resources Survey Letter Report for the New Fleet Facility Project, Santa Ana, Orange County, California

Chambers Group provides this cultural resources survey letter report to Orange County Public Works (OCPW; Applicant; Lead Agency) in support of the proposed New Fleet Facility Project (Project) in Santa Ana, Orange County, California. This Phase I cultural resources assessment includes a records search, literature review, and field survey results for the Project site and surrounding half-mile radius search area (study area) in support of this study. The purpose of the study was to gather and analyze information needed to assess the potential for effects to any historical resources, per California Environmental Quality Act (CEQA) Guidelines § 15064.5(a), within the Project site.

Project Description and Location

The Project Applicant proposes the development of one single 45,706 square foot (SF) building containing vehicle maintenance bays, administrative staff offices, technician workspaces, and storage spaces. Additionally, the Project will include a future 20,000 SF Facility Operations Building, a 10,000 SF solar panel canopy, surface parking spaces, extended access road, and a disposal lot. The Project would serve the fleet vehicles of the Orange County Public Works OC Fleet Services Division. The proposed Project would extend the existing access roads to provide ingress and egress for the Project site via the existing driveways off McFadden Avenue and South Grand Avenue. The Project would add approximately 50,000 SF of paved roadway to the access road.

The Project is situated in the central Santa Ana Valley. The Project is located in the City of Santa Ana, Orange County (Figure 1). The Project site is located on Assessor's Parcel Numbers (APNs) 014-161-07, 988-355-04, 014-161-04, 014-161-05, 014-451-01, and 014-451-02 at 1400 South Grand Avenue, in the City of Santa Ana. The Project is located within the bounds of the former Rancho Santiago de Santa Ana, a historic Spanish land grant. The Project is depicted on the United States Geological Survey (USGS) topographic *Tustin*, California 7.5-minute quadrangle. The Project site elevation ranges from 87 to 99 feet above mean sea level (AMSL).

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

Regulatory Context

As the lead California Environmental Quality Act (CEQA) agency for the Project, the District must determine whether a project may have a significant effect on historical resources (PRC § 21084.1). In addition to the State of California (State) the Project is subject to Orange County regulations relating to cultural resources. The regulatory framework as it pertains to cultural resources under CEQA is detailed below.

Under the provisions of CEQA, including the CEQA Statutes (PRC §§ 21083.2 and 21084.1), the CEQA Guidelines (Title 14 CCR § 15064.5), and PRC § 5024.1 (Title 14 CCR § 4850 et seq.), properties expected to be directly or indirectly affected by a proposed project must be evaluated for eligibility for listing in the California Register of Historical Resources (CRHR).

California Register of Historic Resources

The purpose of the CRHR is to maintain listings of the state's historical resources and to indicate which properties are to be protected, to the extent prudent and feasible, from material impairment and substantial adverse change. The term *historical resources* includes a resource listed in or determined to be eligible for listing in the CRHR; a resource included in a local register of historical resources; and any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant (CCR § 15064.5[a]). The criteria for listing properties in the CRHR were expressly developed in accordance with previously established criteria developed for listing in the National Register of Historic Places (NRHP). The California Office of Historic Preservation (OHP 1995:2) regards "any physical evidence of human activities over 45 years old" as meriting recordation and evaluation.

A cultural resource is considered "historically significant" under CEQA if the resource meets one or more of the criteria for listing in the CRHR. The CRHR was designed to be used by State and local agencies, private groups, and citizens to identify existing cultural resources within the state and to indicate which of those resources should be protected, to the extent prudent and feasible, from substantial adverse change. The following criteria have been established for the CRHR. A resource is considered significant if it:

1. is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. is associated with the lives of persons important in our past;
3. embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. has yielded, or may be likely to yield, information important in prehistory or history.

In addition to meeting one or more of the above criteria, historical resources eligible for listing in the CRHR must retain enough of their historic character or appearance to be able to convey the reasons for their significance. Such integrity is evaluated in regard to the retention of location, design, setting, materials, workmanship, feeling, and association.

Under CEQA, if an archeological site is not a historical resource but meets the definition of a "unique archeological resource" as defined in PRC § 21083.2, then it should be treated in accordance with the provisions of that section. A *unique archaeological resource* is defined as follows:

- An archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:
 - Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information
 - Has a special and particular quality, such as being the oldest of its type or the best available example of its type

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

- Is directly associated with a scientifically recognized important prehistoric or historic event or person

Resources that neither meet any of these criteria for listing in the CRHR nor qualify as a “unique archaeological resource” under CEQA PRC § 21083.2 are viewed as not significant. Under CEQA, “A non-unique archaeological resource need be given no further consideration, other than the simple recording of its existence by the lead agency if it so elects” (PRC § 21083.2[h]).

Impacts that adversely alter the significance of a resource listed in or eligible for listing in the CRHR are considered a significant effect on the environment. Impacts to historical resources from a proposed project are thus considered significant if the project:

- (1) physically destroys or damages all or part of a resource;
- (2) changes the character of the use of the resource or physical feature within the setting of the resource, which contributes to its significance; or
- (3) introduces visual, atmospheric, or audible elements that diminish the integrity of significant features of the resource.

Assembly Bill 52

Assembly Bill (AB) 52 was enacted in 2015 and expands CEQA by defining a new resource category: tribal cultural resources (TCR). AB 52 establishes that “a project with an effect that may cause a substantial adverse change in the significance of a TCR is a project that may have a significant effect on the environment” (PRC § 21084.2). AB 52 also establishes a formal consultation process for California tribes regarding those resources. The consultation process must be completed before a CEQA document can be certified. AB 52 requires that lead agencies “begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project.” Native American tribes to be included in the process are those that have requested notice of projects proposed in the jurisdiction of the lead agency. It further states that the lead agency shall establish measures to avoid impacts that would alter the significant characteristics of a TCR, when feasible (PRC § 21084.3). PRC § 21074(a)(1)(A) and (B) define TCRs as “sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe” which meet either of the following criteria:

- Listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in PRC § 5020.1(k)
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC § 5024.1 (in applying the criteria set forth in subdivision (c) of PRC § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe).

County of Orange

In addition to State regulations, projects built in the City of Santa Ana are also subject to a number of local regulations relating to historical resources. Chapter VI of the County of Orange General Plan discusses historic preservation within the County as follows:

Goals, Objectives, and Policies: Cultural-Historic Resources

Goal 1

To raise the awareness and appreciation of Orange County's cultural and historic heritage.

Objectives

- 1.1 Facilitate and participate in activities that inform people about the social, cultural, economic, and scientific values of Orange County's heritage.
- 1.2 Work through the Orange County Historical Commission in the areas of history, paleontology, archaeology, and historical preservation.

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

Policies

- 1.1 To stimulate and encourage financial support for projects in the public and private sector.
- 1.2 To coordinate countywide programs and be the liaison for local organizations.
- 1.3 To advise and aid the public and private sectors in meeting museum needs and finding funding sources for same.
- 1.4 To stimulate and encourage research, writing, and publication of articles on Orange County subjects.
- 1.5 To develop and maintain a County archive for historically valuable records.
- 1.6 To encourage and facilitate cooperation among local historical societies.

Goal 2

To encourage through a resource management effort the preservation of the county's cultural and historic heritage.

Objectives

- 2.1 Promote the preservation and use of buildings, sites, structures, objects, and districts of importance in Orange County through the administration of planning, environmental, and resource management programs.
- 2.2 Take all reasonable and proper steps to achieve the preservation of archaeological and paleontological remains, or their recovery and analysis to preserve cultural, scientific, and educational values.
- 2.3 Take all reasonable and proper steps to achieve the preservation and use of significant historic resources including properties of historic, historic architectural, historic archaeological, and/or historic preservation value.
- 2.4 Provide assistance to County agencies in evaluating the cultural environmental impact of proposed projects and reviewing EIRs.
- 2.5 Provide incentives to encourage greater private sector participation in historic preservation.

Policies

The following policies addressing archaeological, paleontological, and historical resources shall be implemented at appropriate stage(s) of planning, coordinated with the processing of a project application, as follows:

- Identification of resources shall be completed at the earliest stage of project planning and review such as general plan amendment or zone change.
- Evaluation of resources shall be completed at intermediate stages of project planning and review such as site plan review, subdivision map approval, or at an earlier stage of project review.
- Final preservation actions shall be completed at final stages of project planning and review such as grading, demolition, or at an earlier stage of project review.

Archaeological Resources Policies:

1. To identify archaeological resources through literature and records research and surface surveys.
2. To evaluate archaeological resources through subsurface testing to determine significance and extent.
3. To observe and collect archaeological resources during the grading of a project.
4. To preserve archaeological resources by:
 - a) Maintaining them in an undisturbed condition, or
 - b) Excavating and salvaging materials and information in a scientific manner.

Paleontological Resources Policies:

1. To identify paleontological resources through literature and records research and surface surveys.
2. To monitor and salvage paleontological resources during the grading of a project.
3. To preserve paleontological resources by maintaining them in an undisturbed condition.

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

Historic Resources Policies:

1. To identify historic resources through literature and records research and/or on-site surveys.
2. To evaluate historic resources through comparative analysis or through subsurface or materials testing.
3. To preserve significant historic resources by one or a combination of the following alternatives, as agreed upon by RDMD and the project sponsor:
 - a) Adaptive reuse of historic resource.
 - b) Maintaining the historic resource in an undisturbed condition.
 - c) Moving the historic resource and arranging for its treatment.
 - d) Salvage and conservation of significant elements of the historic resources.
 - e) Documentation (i.e., research narrative, graphics, photography) of the historic resource prior to destruction.

Goal 3

To preserve and enhance buildings structures, objects, sites, and districts of cultural and historic significance.

Objectives

- 3.1 Undertake actions to identify, preserve, and develop unique and significant cultural and historic resources.
- 3.2 Develop and maintain a County archive for historically valuable records, thereby promoting knowledge and understanding of the origins, programs, and goals of the County of Orange.

Policies

- 3.1 To pursue grants and innovative funding strategies for acquisition or development of significant properties.
- 3.2 To develop, utilize, and promote effective technical conservation and restoration strategies.
- 3.3 To appraise, collect, organize, describe, preserve, and make available County of Orange records of permanent, historical value.
- 3.4 To serve as a research center for the study of County history.

Environmental Setting

The Project site is located within the broad alluvial fan that forms the Coastal Plain of Orange County. The coastal plain bound on the northeast by the Santa Ana Mountains and on the south by the Laguna Hills and San Joaquin Hills southwest of the Santa Ana Mountains. These ranges have resulted in the formation of a complex of small alluvial fans that originate along the flanks of the noted mountain ranges at elevations ranging from 350 to 500 feet above sea level.

The Project site is underlain by Quaternary alluvium and colluvium, deposited between the late Pleistocene to the middle Holocene (Morton and Miller 1981). Sediments within the Project site are described as Chino silty clay loam, which occupy the western one-third of the parcel, and Mocho loam, 0 to 2 percent slopes, which occupy the remainder of the parcels. Both soil series are associated with shallow gradient alluvial fans (USDA 2025).

Cultural Setting

Prehistoric Overview

During the twentieth century, many archaeologists developed chronological sequences to explain prehistoric cultural changes within all, or portions of, southern California (Moratto 1984; Jones and Klar 2007). A prehistoric chronology was devised for the southern California coastal region based on early studies and focused on data synthesis that included four horizons: Early Man, Milling Stone, Intermediate, and Late Prehistoric (Wallace 1955, 1978). Although initially lacking the chronological precision of absolute dates (Moratto 1984:159), Wallace's 1955 synthesis has been modified and improved using thousands of radiocarbon dates obtained by southern California researchers over recent decades (Byrd and Raab 2007:217; Koerper and Drover 1983; Koerper et al. 2002). The prehistoric chronological sequence for southern California presented below is a composite based on Wallace (1955) and Warren (1968) as well as later studies, including Koerper and Drover (1983).

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

It is generally believed that human occupation of southern California began at least 10,000 years before present (BP). The archaeological record indicates that between approximately 11,000 and 8,000 years BP, a predominantly hunting and gathering economy existed, characterized by archaeological sites containing numerous projectile points and butchered large animal bones. The most heavily exploited species were likely those species still alive today. Bones of extinct species have been found but cannot definitively be associated with human artifacts in California, unlike other regions of the continent. Although small animal bones and plant grinding tools are rarely found within archaeological sites of this period, small game and vegetal foods were likely exploited. A lack of deep cultural deposits from this period has been interpreted by some researchers as indicative that the region was occupied by small groups that practiced high residential mobility during this period (Wallace 1978).

The earliest cultural manifestations in Orange County evoke what is termed San Dieguito identified in San Diego County and the broader Great Basin region. San Dieguito culture is a manifestation of the Paleo-Coastal Tradition (Moratto 1984) which dates from 11,500 BP to around 8,500 BP (Colton and Erlandson 1991; Erlandson and Moss 1996). Along the coast, the florescence of this complex wanes during the mid-seventh millennium BP (e.g., Haynes et al. 1967; Warren 1968) although San Dieguito-like components may continue for a millennium or more (Gallegos 1987:23). Thus, the San Dieguito begins at the terminal Pleistocene and continues well into the Early Holocene. Some evidence of San Dieguito culture was identified at CA-ORA-64, a large, Early to Middle Holocene multi-component site on the east side of Newport Bay, dating between 9,400 and 4,300 calendar years before present (CYBP) (Drover et al. 1983:Table 1; Macko 1998:41; Erlandson et al. 2005:Table 1).

First described by Malcolm Rogers (1929, 1939) the understanding and definition of the San Dieguito culture has undergone considerable refinement (e.g., Warren 1967, 1968). Added to the artifact inventory are such things as manos and metates (True 1958; Ezell 1983), ornamentation (Kaldenberg 1982), and asphaltum-hafted tools (Ezell 1977). Chipped stone tools include large leaf-shaped points, a variety of leaf-shaped knives, large ovoid, domed and rectangular end or side scrapers, engraving tools, and crescentics (Warren 1967). Some discussion has been given to whether or not San Dieguito should include milling equipment, such as manos and metates (Bull 1987; Ezell 1987; Gallegos 1987; Warren 1987).

Given the paucity of San Dieguito sites identified in Orange County, the succeeding three major periods of prehistory for the greater southern California region are most relevant to Orange County. These have been refined by recent research using radiocarbon dates from archaeological sites in coastal southern California (Koerper and Drover 1983; Mason and Peterson 1994):

- Millingstone Period (6,000–1,000 B.C., or about 8,000–3,000 years ago)
- Intermediate Period (1,000 B.C.–A.D. 650, or 3,000–1,350 years ago)
- Late Prehistoric Period (A.D. 650–about A.D. 1800, or 1,350–200 years ago)

Around 6,000 years BP, a shift in focus from hunting toward a greater reliance on vegetal resources occurred. Archaeological evidence of this trend consists of a much greater number of milling tools (e.g., metates and manos) for processing seeds and other vegetable matter (Wallace 1978). This period, traditionally described as the Millingstone Period, was a long cultural phase characterized by small, mobile groups that likely relied on a seasonal round of settlements that included both inland and coastal residential bases. Seeds from sage and grasses, rather than acorns, provided calories and carbohydrates. Faunal remains from sites dating to this period indicate that similar animals to those in the prior period were hunted. Inland Millingstone sites are characterized by numerous manos, metates, and hammerstones. Shell middens are common at coastal Millingstone sites. Coarse-grained lithic materials, such as quartzite and rhyolite, are more common than fine-grained materials in flaked stone tools from this time. Projectile points are found in archaeological sites from this period, but they are far fewer in number than from sites dating to before 6,000 years BP. An increase in the size of groups and the stability of settlements is indicated by deep, extensive middens at some sites from this period (Wallace 1978). More recently, this period has been subject to interpretive refinement and revised terminologies to further explicate the archaeological record.

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

Based on research by Sutton and Gardner (2010) Orange County, and nearby regions, are better defined as being part of several phases of the Topanga Pattern. In this terminology, Pattern replaces Period, but the general organizing principles remain. Phase I (or Topanga I) of the Topanga Pattern is characterized by the presence of numerous manos and metates, abundant core tools (scraper planes, choppers, and hammerstones), a few mortars and pestles, relatively few large, leaf-shaped projectile points, cogged stones, and early discoids. Topanga I components have been dated between about 8,500 and 5,000 BP (Sutton and Gardner 2010). Within Orange County, the most prominent site within this Phase is CA-ORA-83, known as the "Cogged Stone Site," located on Bolsa Chica Mesa in Huntington Beach and radiocarbon dated to at least 9,000 BP (Sutton and Gardner 2010). At CA-ORA-64, another Topanga I site located in Irvine, extensive Early Holocene trade networks were indicated by the presence of obsidian lithic materials representing several sources, including one in northeastern California (Sutton and Gardner 2010).

The subsequent Topanga II phase (correlative to the previously described Intermediate Period) is defined by changes in mortuary patterns, from secondary inhumations placed under cairns and south-facing extended inhumations during Phase I, to flexed inhumations becoming common, with reburials, some beneath inverted metates, continuing, and changes in technology with the adoption of the mortar and pestle being used alongside manos, metates, scrapers, core tools, discoids, charmstones, cogged stones, and a greater number of projectile points than in the previous period (Sutton and Gardner 2010). Within Orange County, Topanga II localities, of which several major occupations have been dated between 5,500 and 3,000 BP, are sometimes considered to be part of "an expansion of settlement to take advantage of new habitats [kelp beds and estuaries] and resources [shellfish and fish] that became available as sea levels stabilized between about six and five thousand years ago" (Mason et al. 1997:58; Masters and Aiello 2007, cited in Sutton and Gardner 2010). Also, during this Phase, trade networks apparently intensified and there appears to be a coalescence of trade between southern California and the northwestern Great Basin, termed the Western Nexus. This interaction sphere developed between about 5,100 and 4,500 BP and largely revolved around the distribution of Olivella grooved rectangle (OGR) beads, large bifaces, stone balls, and lozenge stones (Sutton and Gardner 2010).

Sutton and Gardner (2010) suggest that Topanga III (correlative to the previously termed Late Prehistoric) is representative of a "relic" Topanga II populations that became isolated by the movement of Takic peoples from the north into coastal Los Angeles and Orange counties about 3,500 BP. These "surviving" Topanga II groups became Topanga III as a result of their isolation from other (e.g., Greven Knoll III [Encinitas Tradition]) groups when Takic-speaking groups expanded into the area (i.e., the Shoshonean wedge [Kroeber 1925]). Remnant Topanga III populations are believed to have persisted until about 2,000 BP, at which time they were incorporated or replaced by the Gabrielino or Chumash (e.g., Sutton 2009, cited in Sutton and Gardner 2010).

In sites post-dating roughly 3,000 years BP, archaeological evidence indicates the reliance on both plant gathering and hunting continued but was more specialized and locally adapted to particular environments. Mortars and pestles, previously introduced during Phase II of the Topanga Pattern, become more prominent and augment metates and manos for grinding seeds and other vegetable material. Chipped-stone tools became more refined and specialized, and bone tools appeared to be more common. During this period, population densities were higher than before; and settlement became concentrated in villages and communities along the coast and interior valleys (Erlandson 1994; McCawley 1996). The dietary inclusion of the acorn – a high-calorie, storable food source – probably facilitated greater sedentism and increased social organization. The semi-sedentary settlement pattern characteristic of the Late Prehistoric Period may have begun during the Topanga II phase (Intermediate Period), and regional subcultures appear to have developed, each with its own geographical territory and language or dialect (Kroeber 1925; McCawley 1996; Moratto 1984). These were most likely the basis for the groups encountered by the first Europeans during the eighteenth century (Wallace 1978). Despite the regional differences, many material culture traits were shared among groups, indicating a great deal of interaction (Erlandson 1994). In general, the Late Prehistoric Period is better understood than earlier periods largely through ethnographic analogy made possible by ethnographic and anthropological research of the descendants of these groups in the late nineteenth and early twentieth centuries.

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

Ethnographic Overview

The Project site lies within a transitional area historically occupied by the Juaneño, so called after their historic-period association with Mission San Juan Capistrano, and the Gabrielino, named after their association with the Mission San Gabriel Arcángel.

Juaneño/Acjachemen

The Juaneño, or Acjachemen, are members of the Takic-speaking group that includes Gabrielino, Luiseño, Cupan, and Cahuilla, among others, and are named after the Spanish mission at San Juan Capistrano (Bean and Shipek 1978). The degree to which the Acjachemen are related to their Gabrielino neighbors to the north, or to their Luiseño neighbors to the south and east is debated. Bean and Shipek (1978) essentially subsume the Juaneño within the greater Luiseño discussion, while others (e.g., Kroeber 1925, Harrington, n.d., cited in Koerper and Mason 2004) suggest affinity with the Gabrielino. Nevertheless, Juaneño or Acjachemen territory generally ranged between Las Flores creek in the south, to Aliso Creek in the north, and from the coast, across the Santa Ana Mountains, to Temescal Valley in the east.

The Acjachemen practiced a semi-sedentary hunting and gathering subsistence strategy, with a focus on well-watered drainage systems that allowed seasonally available resources (Koerper and Mason 2004). One of the most important food resources for the group were hard seeds. Availability of seed as a staple may have been a determinant as to when the group moved or split apart into smaller units in other parts of the territory (Koerper and Mason 2004). Additionally, acorns were gathered from oak groves in canyons, drainages, and foothills. Acorns were ground into flour using mortars and pestles. Protein was supplemented through the meat of deer, rabbits, and other animals, hunted with the bow and arrow, or trapped. Shellfish was collected and eaten, and the shell was then used to make hooks for fishing, beads, and other ornaments (Bean and Shipek 1978).

Accurate population figures remain elusive; however, villages may have contained up to 300 people at certain times of the year. These tended to be located near permanent water and a variety of food sources. The San Juan Basin was densely populated, and villages were closely spaced because of the year-round availability of fresh water in San Juan Creek. Each village was typically located in the center of an established area from which resources for the group were gathered, usually within a day's journey. Subsequently, small groups would leave the village for a short time to hunt fish or gather plant materials (Bean and Shipek 1978).

Gabrielino

The Gabrielino (sometimes spelled Gabrieliño, Gabrieleno or Gabrieleño), are Cupan speakers. The Cupan languages are part of the Takic family, which is part of the Uto-Aztecan linguistic stock. Their tribal territory included the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers, all of the Los Angeles Basin, the coast from Aliso Creek in the south to Topanga Creek in the north, and the islands of San Clemente, San Nicholas, and Santa Catalina. Villages or triblets were politically autonomous and made up of different lineages. Each lineage had its own leader and would seasonally leave the village to collect resource items (Bean and Smith 1978). Tribal boundaries were not fixed and overlapped with neighboring people, including Chumash (Barbareño, Ventureño, Purisimeño, Obispeño, Ineseño, Cruzeño, Emigdiano, and the Cuyama Chumash), Fernandeseño Tataviam, Serrano, Cahuilla, Acjachemen (Juaneño), and Luiseño cultural groups. These overlaps historically have been a source of confusion, contest, conflict, and opportunity, which has persisted to this day.

Gabrielino material culture incorporates a variety of tools, including saws made from deer scapulae, bone or shell needles, fishhooks and awls, scrapers, flakers (of bone or shell), wedges, hafted or unhafted lithic or cane knives, and lithic drills. Food preparation items included bedrock and portable mortars, metates, mullers, shell spoons, and mealing brushes. Wooden items include stirrers, paddles, bark platters, wooden bowls (often inlaid with Haliotis shell). Pottery vessels were made by coiling technique and paddle and anvil (Blackburn 1962-1963). The Gabrielino were noted for their objects made of steatite, usually obtained from Santa Catalina Islands, where a veritable steatite industry flourished, either in raw or finished form. The steatite was used in making animal carvings, pipes, "ritual" objects, ornaments, and cooking utensils. Utilitarian items were frequently decorated with shell inlaid in asphaltum, rare

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

minerals, carvings, and painting, and comparable in quality and excellence to that of the Chumash (Bean and Smith 1978).

Baskets were made by the women from the stems of rushes (*funcus* sp.), grass (*Muhlenbergia rigens*), and squawbush (*Rhus trilobata*) with a three-color patterned decoration (Harrington 1942). Coiled wares included mortar hoppers; flat baskets used as plates, trays, winnowers, shallow carrying or serving baskets; storage baskets; and small globular baskets used to keep trinkets in.

Weapons included three forms of wooden war clubs, self- and sinew-backed bows, tipped (stone or bone) and untipped cane arrows (simple or compound), wooden sabers, throwing clubs, and slings used for hunting birds and small game (Blackburn 1962-1963).

Houses were domed, circular structures thatched with tule, fern, or carrizo, and in some cases, "so spacious that each will hold fifty people" (Johnston 1962), capable of supporting three or four families living in each one (Costansó 1911). For groups located near the sea, the doorways opened seaward, to avoid the north wind (Harrington 1942). Other structures commonly found in villages included sweathouses (small, semicircular, earth-covered buildings used for pleasure and as a clubhouse or meeting place for adult males), menstrual huts, and a ceremonial enclosure, the *yuva'r*. *Ayuva'r* was built near the chief's house and was essentially an open-air enclosure, oval in plan, made with willows inserted wicker fashion among willow stakes, decorated with eagle and raven feathers, skins, and flowers, and containing inside the enclosure painted and decorated poles. Consecrated anew before every ceremony, these ceremonial enclosures were the centers for activities relating to the Chingichngish cult. The religious beliefs and rituals of the cult originated in the Gabrielino territory and found its way to, and significantly influenced, non-Gabrielino groups (Bean and Smith 1978).

Typically, men hunted, fished, assisted in some gathering activities, and conducted most trading ventures. Large land mammals were hunted with bow and arrow, while smaller game was taken with deadfalls, snares, and traps, or in communal hunts with nets, bow and arrows, and throwing clubs (Blackburn 1962-1963). Along the coast harpoons, spear throwers, and clubs were used. Fishing, typically, took place along shore or along rivers, streams, and creeks with the use of hook and line, nets, basketry traps, spears, bow and arrow, and vegetal poisons. Deep-sea fishing and trading expeditions also occurred between island and mainland groups and were undertaken from boats made of wooden planks lashed and asphalted together. Women were involved mainly in collecting and preparing most floral and some animal food resources, as well as the production of baskets, pots, and clothing (Bean and Smith 1978).

The Gabrielino established a broad, and deep, trade network, ranging between the Channel Islands and the interior California deserts and Southwest regions. Nearby Serrano people exchanged acorns, seeds, obsidian, and deerskins in exchange for shell beads, dried fish, sea otter pelts, shells, possibly salt, and steatite. Colorado River oriented middlemen, such as Cahuilla, Chemehuevi, Mohave, allowed access to items such as Cibola White Ware, while they accepted shell and steatite which was traded to Pueblo dwelling populations. These trading networks to the Southwest may have been in place as early as A.D. 600-800 (Ruby 1970). The principal trade item, however, was steatite. This material, acquired from Santa Catalina Island, was traded, in rough or finished form, to many groups, such as the Chumash, Yokuts, Ipai-Tipai (Diegueño), Luiseño, and the Serrano. Most of the steatite was used to make palettes, arrow straighteners, ornaments, and carvings of animal or animal-like beings (Bean and Smith 1978).

During the Spanish missionization period people from greater area would have been incorporated into the San Gabriel mission. Whether they were Serrano, Cahuilla, Fernandeano Tataviam, Chumash or local Gabrielino, all would have been identified as Gabrielino, or as belonging to Mission San Gabriel. Indeed, even Fernandeano people have been collectively grouped within Gabrielino ethnographic treatments. Today, Fernandeano Tataviam, Gabrieleño Band of Mission Indians-Kihz Nation, and the Gabrielino-Tongva Indian Tribe identify as individual groups.

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

Historic Overview

Post-European contact history for the state of California is generally divided into three periods: the Spanish Period (1769–1822), the Mexican Period (1822–1848), and the American Period (1848– present). Briefly, and in very general terms, the Spanish Period encompassed the earliest historic-period explorations of the West, colonization, missionization and proselytization across the western frontier, the establishment of major centers such as Los Angeles and Monterey and a line of missions and presidios with attendant satellite communities, minor prospecting, and a foundational economic structure based on the rancho system. The Mexican Period initiated with a continuation of the same structures; however, commensurate with the political changes that led to the establishment of the Mexican state the missions and presidios were secularized, the lands parceled, and Indian laborers released. Increased global trade introduced both foreign and American actors into the Mexican economic and political sphere, and both coincidentally, and purposefully, smoothing the transition to the American Period. The American Period was ushered in with a momentous influx of people seeking fortune in the Sierra foothills where gold was “discovered” in 1848. By the early 1850s people from all over the globe had made their way to California. Expansive industries were required to supply the early mining operations, such as forestry products, food networks such as grains, poultry, cattle, water systems, which intensified the early Mexican Period systems of ranches and supply chains, as well as the development and expansion of port cities to supply hard goods and clothes, animals, and people along improved trail and road networks. California cycled through boom and bust for several decades until World War I when the Department of the Navy began porting war ships along the west coast. Subsequently, California has grown, and contracted, predominantly around military policy along the west coast, and the Pacific Ocean. Following the industrial expansion related to World War II and the Cold War, technology and systems associated have come to fore as economic drivers.

City of Santa Ana

Orange county was officially formed on August 1, 1889, with Santa Ana voted as the county seat, after two decades of effort to break from Los Angeles County. The county name was not selected due to the prominence of the fruit within the new county, but for the imagery it was supposed to effect – that of a semi-tropical paradise, an American “Mediterranean coast.” While it was understood that orange trees thrived in the region, it was not until after 1900 that citrus became the area’s dominant crop (Brigandi 2010).

Currently, Santa Ana is a city of over twenty-seven square miles with a population of approximately 325,000, located thirty-three miles south of Los Angeles. The city was incorporated within the former Rancho Santiago de Santa Ana, granted to José Antonio Yorba in 1810, and a portion of Rancho Las Bolsas, which itself was part of the larger, former Rancho Los Nietos, granted to Manuel Nieto in 1784 – Las Bolsas was conferred to Maria Catarina Ruiz, widow of Jose Antonio Nieto, son of Manuel Nieto, in 1834 (Westfall 2003).

Rancho Santiago de Santa Ana, comprising some 62,516 acres, extended along the east bank of the Santa Ana River from the mountains to the sea, eventually supporting at least 33 historic adobes across its expanse, and was the home of two of the oldest families in California, the Yorbos and the Peraltas. Rancho Santiago de Santa Ana comes from the two camp sites the July 1769 Portola expedition utilized on its way to found Monterey (Santa Ana Historical Preservation Society 2025). Family interest in the rancho was conferred to Don Jose Andres Sepulveda, owner of Rancho San Joaquin. Sepulveda, who had spent considerable time and money proving his land claims before California State Lands Commission, went into debt, borrowing money at huge interest rates. Ultimately, Sepulveda was unable to keep up the payments on his mortgage due in large part to floods in 1861-62, and a whipsaw drought of 1863-64. Sepulveda was forced to sell off his vast holdings on the Rancho San Joaquin, which had incorporated the Rancho Santa Ana, to James Irvine, Llewellyn Bixby, and Thomas Flint (Santa Ana Historical Preservation Society 2025).

On October 27, 1869, William Spurgeon paid \$594 for 74.25 acres of the former Rancho, and hired George Wright of Los Angeles to lay out the 24-square-block townsite that became Santa Ana. The townsite was plotted on December 13, 1870, and bounded by First Street on the south, Seventh Street on the north, West (now Broadway) Street on the west, and Spurgeon Street on the east (Santa Ana Historical Preservation Society 2025). Santa Ana was incorporated as a city in 1886, and in 1889 became the seat of the newly formed Orange County.

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

In 1887 and Santa Ana became the terminus for the Southern Pacific Railroad due in large part to Orange County crop yields. At the same time the Santa Fe Railroad established a line through Santa Ana, continuing south to San Diego (Santa Ana Historical Preservation Society 2025). Santa Ana's most significant development has been during the post-war period. World War II necessitated development of major military installations, such as the Santa Ana Army Air Base, which brought thousands of Americans through Santa Ana, many of whom returned to settle in California cities like Santa Ana. Due to its former association with War-era military structures, Santa Ana continued its development of defense related industries in the Postwar and Cold War era (Santa Ana Historical Preservation Society 2025).

Methods of Review

Records Searches

Chambers Group requested a records search from the California Historical Resources Information System (CHRIS) South-Central Coastal Information Center (SCCIC) at California State University, Fullerton, on May 30, 2025. A study area with a half-mile radius of the Project site was requested to provide additional context to the Project site and surrounding area and more information on which to base this review. The SCCIC returned the records search results on June 26, 2025, providing information on all documented cultural resources and previous archaeological investigations within a half-mile radius of the Project site. Resources consulted during the records search conducted by the SCCIC included the NRHP, California Historical Landmarks (CHL), California Points of Historical Interest (CPHI), the California State Historic Resources Inventory, local registries of historic properties, and a review of available Sanborn Fire Insurance maps as well as historical photographs, maps, and aerial imagery. The study also included a search for potential prehistoric and/or historic burials (human remains) evident in previous site records and/or historical maps. In addition, Chambers Group submitted a request to the Native American Heritage Commission (NAHC) for a review of the Sacred Land Files (SLF) for the Project site and surrounding vicinity. Results of the NACH SLF records search and additional outreach are detailed below and included in Attachment A. The results of the SCCIC records search are also detailed below and included in confidential Attachment B.

Chambers Group requested a paleontological records search from the Natural History Museum of Los Angeles County (NHMLA) on May 30, 2025. This information was requested with the intent to provide further context related to the paleontological sensitivity of the area based on known fossil locations identified within the Project site and the requested half-mile search radius. The paleontological records provide insight into what associated geological formations are most likely to contain fossils as well as the associated depths and placement of the known fossil locals relative to the geological formations in the area. On June 8, 2025, Chambers Group received the results of the paleontological records search. These results are detailed below.

Background Research

In addition to the records search review, Chambers Group archaeologists completed further background research to determine if any additional historic properties, landmarks, bridges, or other potentially significant or listed properties are located within the Project site or within the half-mile study area. This background research included, but was not limited to, the NRHP, California State Historic Property Data Files, California State Historical Landmarks, California Points of Historical Interest, Office of Historic Preservation Archaeological Determinations of Eligibility, historic aerial imagery accessed via NETR Online or other aerial services, Historic U.S. Geological Survey topographic maps, General Land Office (GLO) survey plat maps, Built Environment Resource Directory (BERD), and Caltrans, and State and local bridge surveys. Additionally, Chambers Group archaeologists reviewed the Orange County Historical Landmarks inventory designated by the County of Orange.

Field Survey Methods

This assessment also included a field survey of the entire proposed Project site. The survey consisted of a systematic surface inspection site transected at no more than 15-meter intervals to ensure that any evidence of surface-exposed cultural materials and/or evidence of paleontological resources could be identified.

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

Chambers Group examined the ground surface for the presence of prehistoric artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools) or features (e.g., milling features, hearths, stone circles), historical artifacts (e.g., metal, glass, ceramics) or features (agricultural installations, irrigation systems), sediment discoloration that might indicate the presence of a cultural midden, roads and trails, and depressions and other features that might indicate the former presence of prehistoric or historic structures or buildings (e.g., post holes, foundations).

All field notes, photographs, and records related to the current study are on file at the Chambers Group Costa Mesa office.

Project Personnel

Chambers Group Cultural Resources Department Lead Lucas Tutschulte managed the Cultural Resources related tasks. Chambers Group cultural resources principal investigator, Richard Shultz, MA, RPA, completed the pedestrian survey, conducted background research, and authored the report. Additional support and initial research were conducted by Chambers Group cultural resources specialist Efrain Arroyo, MA, RPA. Lucas Tutschulte performed quality control for the report.

Results

Cultural Resources Reports within the Study Area

Based on the records search conducted by the SCCIC, nine cultural resource studies have previously been completed within the half-mile records search radius. Table 1 provides further details of these studies. None of the previous studies include the Project site. A map (Figure 2) of the record search results is included in confidential Attachment B.

Table 1: Previous Cultural Resources Studies within a Half-Mile Radius of the Project Site

Previously Recorded Cultural Resources within the Study Area

Based upon the records search conducted by the SCCIC, one previously recorded cultural resource is recorded within the half-mile records search radius (Table 2). None are located within the Project site. A map (Figure 2) of the record search results is included in confidential Attachment B.

Table 2: Previously Recorded Cultural Resources within a Half-Mile Radius of the Project Site

Primary Number	Trinomial	Site Description	Within Project Site?
P-30-176663	N/A	Atchison, Topeka & Santa Fe RR, Burlington Northern Santa Fe RR	No

Background Research Results

As a result of the records search review and archival research, no previously recorded resources or any other listed or potentially significant properties are located within the Project site. Additionally, a review of the Orange County BERD revealed no recorded built environment resources within the study area or Project site.

A search of GLO Records identified no survey plat maps that cover the Project site, as it is located within the unsectioned lands of the Rancho Santiago de Santa Ana, a historic Spanish land grant, and thus not part of the Public Land Survey System (PLSS).

The oldest available USGS topographic map is the 1896 edition of the *Santa Ana*, California 15-minute quadrangle (USGS 2025). This map depicts no features within the Project site; the "Newport Rail Road" alignment is noted adjacent to the western margin of the Project parcel, and remains to this day as part of the Southern Pacific line, and a road alignment

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

that is now South Grand Avenue fronts the eastern margin of the Project site. The 15-minute series continued to be issued, without notable changes to the area of interest, until 1902.

The 1901 *Santa Ana*, California 15-minute quadrangle (USGS 2025) also contains no notable features within the Project site. This map series was issued until 1945, though the *Tustin*, California 7.5-minute series (1:31,680 scale) was first issued in 1932.

The 1932 *Tustin* quadrangle series (USGS 2025) depicts two buildings along what was then Mc Clay Street, located along the middle of the eastern margin of the Project site. This 7.5-minute series was issued until 1945, three years after a new *Santa Ana*, California 15-minute series began.

The 1942 *Santa Ana* 15-minute quadrangle (USGS 2025) shows a short access road bisecting a collection of three buildings in the area seen in the 1932 *Tustin* series. In addition, the Project site landscape is indicated as being in orchard grove configuration. The 15-minute series was issued until 1948, when a new *Tustin*, California 7.5-minute series (1:2400 scale) began to be issued.

The 1948 *Tustin* 15-minute quadrangle (USGS 2025) returns to illustrating two buildings within the Project site, and excludes the road indicated in the 1942 series. Similarly, the area is also shown in extensive orchard conditions, and no changes are noted in the last of the series issued in 1962.

A 1967 edition of the 1965 *Tustin* 7.5-minute quadrangle (USGS 2025) shows a well where one of the buildings had been previously depicted, and the Project site still in orchard configuration. By this time, Mc Clay Street had been renamed to Grand Avenue.

The 1972 and 1982 editions of the 1965 *Tustin* 7.5-minute quadrangle (USGS 2025) illustrate many new buildings in the area (photorevised), including three of the main buildings adjacent to the northeastern portion of the Project site. The area to the southwest, including the Project site, is depicted in orchard condition. The last of the buildings first noted in 1932 is still depicted, in an area near the southern end of the photovoltaic array currently located in the project area.

Aerial photographs between 1931 and 1991 indicate changes in land use over that period, ranging from orchard production to ranching, to commercial/industrial development, resulting in the current configuration of the Project site and immediately adjacent areas. The earliest aerial photograph dates to 1931 (UCSB 2025a) and indicates that the Project parcel has been developed for orchard agriculture, and two ranch houses are located on the eastern margin, adjacent to Mc Clay/Grand Avenue, which appears to be unpaved at this time. The 1960 aerial (UCSB 2025b) indicates the same configuration, as does the 1965 aerial (UCSB 2025c). The first of the currently existing buildings is seen on the 1970 aerial (UCSB 2025d), which also shows that both ranch houses, and some orchard have been removed. By 1975 two of the existing buildings have been constructed, with the third being prepared. Remaining areas property are shown under parking lot, or use as construction laydown yards, with the remainder still in orchard (UCSB 2025e). By 1976 the third building under construction in the 1975 aerial (UCSB 2025f) had been completed. The 1981 aerial (UCSB 2025g) indicates that the remaining orchard had been cleared and by 1991 both the John F. Kennedy Elementary School had been built, and the fourth main building, along the southern parcel boundary, was under construction (UCSB 2025h). The undeveloped field, which forms the bulk of the current Project site, has been graded, disced, and cleared of vegetation (mowed) on a regular basis (Google Earth 2025).

Native American Heritage Commission Sacred Lands File Search

On May 30, 2025, Chambers Group requested that the NAHC conduct a search of its SLF to determine if sacred lands or resources important to Native Americans have been recorded in the Project site and surrounding half-mile radius. On June 26, 2025, Chambers Group received a response from the NAHC stating that their SLF search was positive. The NAHC specifically recommended that the Juaneño Band of Mission Indians and the Juaneño Band of Mission Indians Acjachemen Nation - Belardes be contacted due to the positive results. Chambers Group provided the results of the NAHC SLF records search to the County upon receipt, and they are included with this report in Attachment A.

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

The NAHC provided a list of 24 Native American tribal contacts that may have knowledge of cultural resources near the Project site (Attachment A). The associated Native American contact list provided contacts from the Cahuilla Band of Indians, Gabrieleno Band of Mission Indians – Kizh Nation, Gabrieleno/Tongva San Gabriel Band of Mission Indians, Gabrielino Tongva Indians of California Tribal Council, Gabrielino-Tongva Tribe, Juaneño Band of Mission Indians, Juaneño Band of Mission Indians Acjachemen Nation – 84A, Juaneño Band of Mission Indians Acjachemen Nation – Belardes, Pala Band of Mission Indians, Santa Rosa Band of Cahuilla Indians, and Soboba Band of Luiseno Indians.

AB 52 Consultation

As the CEQA lead agency, the County is responsible for conducting AB 52 consultation. Per updates from the County, AB 52 consultation notification letters were sent on August 21, 2025. For further AB 52 details, please refer to the environmental document prepared for the Project.

Paleontological Resources

Chambers Group requested a paleontological resource records search from the NHMLA on May 30, 2025. The results of the paleontological resource records search were received on June 8, 2025.

The records search results identified no fossil localities directly within the Project site. However, the results identified fossil localities nearby from the same sedimentary deposits that may occur in the Project site, either at the surface or at depth (Table 3) (Bell 2025). As such, there is potential to encounter potentially significant paleontological resources within these fossil bearing sedimentary deposits underlying the Project site, depending on the specific depth and locations of these sedimentary deposits and the related Project construction plans.

Table 3: NHMLA Documented Fossil Localities

Locality Number	Location	Formation	Taxa	Depth
LACM VP 1652	Rio Vista Avenue south of Lincoln Avenue	Alluvium (Pleistocene)	Sheep (<i>Ovis</i>)	Unknown (excavations for housing project)
LACM VP 7867	Former El Toro Marine Base	Unknown formation (Pleistocene)	Rodent (<i>Rodentia</i>)	25 feet bgs
LACM VP 7657 - 7659	Ellis Avenue & Patterson Lane, Huntington Beach	Unknown formation (Pleistocene; gray siltstone)	School shark (<i>Galeorhinus</i>), eagle ray (<i>Myliobatus</i>), goby (<i>Lepidogobius</i> , <i>Leptocottus</i>), midshipmen (<i>Porichthys</i>), croaker (<i>Seriphus</i>), flatfish (<i>Citharichthys</i>), cusk-eel (<i>Otophidium</i>), skate (<i>Raja</i>), angelshark (<i>Squatina</i>), sculpin (Cottidae)	150 - 350 feet bgs
LACM VP 4219	SW end of Newport Fwy between Santa Ana Isabel Ave & 23rd St	Palos Verdes Sand (coarse poorly sorted friable sand)	Camel family (Camelidae), sea turtle (Cheloniidae); uncatalogued fish and birds; invertebrates (<i>Entobia</i> , <i>Lottia</i> , <i>Caesia</i> , <i>Volvania</i> , <i>Ala</i> , <i>Eulithidium</i> , <i>Chama</i> , <i>Glossaulax</i> , <i>Agathistoma</i> , <i>Sinum</i> , <i>Chlorostoma</i> , <i>Calianax</i> , <i>Ophiodermella</i> , <i>Serpulorbis</i> , <i>Argopecten</i> , and others)	30 feet bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

Field Survey Results

Chambers Group principal investigator Richard Shultz conducted a pedestrian survey of the entire Project site on July 16, 2025. Open areas of the Project site were surveyed at no more than 15 meter (50 foot) transect intervals. The ground surface visibility was generally poor (<10 percent), obscured by dense vegetation. However, certain field characteristics were discernable (Photographs 1-4). On site sediments are generally compact, light gray, silty loam, with evidence of prior fill deposits of gravel-laden sediments, as well as concrete debris, and modern trash refuse that have been integrated across the open field. Numerous exposed rodent holes and subsurface sediments were inspected for artifacts and soil stratigraphy, with none observed (Photograph 2).

No evidence of cultural or paleontological resources was observed during the field survey.

Discussion

As detailed above, Chambers Group conducted a Project site-specific study that included cultural resources records searches, literature review, and a pedestrian survey for the proposed Project in accordance CEQA, as well as the County's goals and policies regarding the protection of archaeological, tribal, historical, and paleontological resources outlined in their General Plan (County of Orange 2012). County of Orange Resources Element Goals 1-3 of their General Plan specifically direct the identification and protection of archaeological, paleontological, and historical resources within the County, and will be applicable if resources are encountered during the Project.

An archival records search through the CHRIS database at the SCCIC, background research of the Project site, and a field survey were conducted as part of this study. A paleontological records search was also conducted by the NHMLA. In addition, Chambers Group requested an SLF search from the NAHC to determine the presence or absence of data regarding any known sacred lands previously reported within the Project site or its half-mile radius.

The SCCIC records search identified no previous cultural resources study that included the Project site; no cultural resources have been recorded within the Project site. The paleontological record search resulted in no documented fossil localities within the Project site. However, the results also indicated fossils localities have been recorded within the half-mile radius search area in the same sedimentary deposits as those mapped underlying the Project site. The NAHC SLF search was positive for documented sacred lands important to the local Tribal groups in the Project site and/or surrounding area.

Based on the review of available historic maps and aerial imagery, Chambers Group archaeologists observed that the Project site was accessible by dirt road by 1896. The Project site was in use as orchard/agricultural land with small residential buildings associated by 1931, and continued in this arrangement until approximately 1970, when the first of the current buildings situated on Project parcels were developed. Subsequent development removed the remaining evidence of agricultural use by 1981.

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

While no archaeological resources were apparent during the survey effort, there remains a potential for encountering buried cultural resources. Given the historic context, these are more likely to be historic-period materials associated with the prior use of the area for agricultural development such as agricultural equipment or related refuse. As the parcels associated with the Project site once supported at least two ranch houses and a well, it is possible that both infrastructure supporting and waste from the ranches could be encountered. Though not indicated during the survey, these items may take the form of refuse pits, foundations, building debris, or irrigation system items such as supply pipes, or drains.

During the field survey, no evidence of cultural or paleontological resources was observed. While there are no previously recorded cultural or paleontological resources in the Project site, there remains potential to uncover archaeological deposits during construction. Due to the mapped geologic formations underlying the Project site known to bear paleontological resources and the known fossil localities provided in the surrounding study area, there remains potential that new fossils could be exposed during the Project.

In summary, Chambers Group found no physical or archival evidence of cultural or paleontological resources within the Project site. While no surficial evidence of prehistoric or historic archaeological resources was observed, the ground surface visibility was limited due to dense vegetation in much of the Project site. Although the Project site has evidence of past disturbance and while the potential for encountering intact resources within the upper sediments is low, the possibility of buried resources being identified below surface disturbances is not diminished. Research indicates geologic units known to be fossil bearing underlay the Project site and could be encountered during Project-related ground-disturbing construction activities. Additionally, due to the surface nature of the previous disturbance and limited surface visibility during survey, there is potential that intact native soil formations, which have been known to bear cultural resources, underly the Project site. Thus, there remains potential that buried cultural resources could be encountered during the Project.

Recommendations

Per CEQA Guidelines the Project should be designed to avoid impacts to cultural resources within the Project site whenever feasible. In conformance with CEQA and the County of Orange General Plan Goals and Policies related to cultural and paleontological resources, Chambers Group recommends the following mitigation measures be implemented as part of Project approval to ensure that potential impacts to cultural and paleontological resources are less than significant.

MM CUL-1 The County shall retain the services of a Qualified Archaeologist, meeting the Secretary of the Interior Standards, and County requirements. The Qualified Archaeologist shall remain on-call throughout the Project. The Qualified Archaeologist or cultural resources specialist working under the direction of the Qualified Archaeologist, shall provide an initial cultural resources sensitivity training (which may be incorporated within a more comprehensive or multi-discipline Worker Environmental Awareness Program) to inform all construction personnel prior to construction activities about the proper procedures in the event of an archaeological discovery. The cultural resources sensitivity training is necessary to inform the construction personnel of the potential to encounter buried cultural resources and provide examples of potential cultural materials that may be encountered. The training shall be held in conjunction with the Project's initial on-site safety meeting and shall explain the applicable protocols, procedures, and legal basis for the protection of significant archaeological resources.

In the event of an inadvertent discovery of potential cultural resources (artifacts or features) during ground-disturbing activities, construction activities within a 50-foot radius of the discovery shall be halted while the Qualified Archaeologist assesses the find. Additionally, all consulting Native American Tribal groups that requested notification of any inadvertent discovery of cultural resources on the Project shall be notified appropriately. If the resource is determined to be significant or unique through significance evaluation, and avoidance is not possible, appropriate mitigation or treatment shall be

CULTURAL RESOURCES SURVEY LETTER REPORT FOR THE NEW FLEET FACILITY PROJECT

Orange County Public Works

established and implemented. These might include a cultural resources mitigation and monitoring plan, treatment plans, or data recovery programs. All monitoring or associated plans would be prepared and implemented under the direction of the Qualified Archaeologist. All required close-out reporting or archaeological site records would be completed in accordance with the Office of Historic Preservation's guidelines and submitted to the appropriate CHRIS IC, as necessary.

MM PAL-1

Prior to the issuance of a grading permit, the County shall be required to obtain the services of a Qualified Project Paleontologist to remain on call for the duration of the proposed ground-disturbing construction activity. The paleontologist selected must be approved by the County. Upon approval or request by the County, a paleontological mitigation plan (PMP) outlining procedures for paleontological data recovery shall be prepared for the Project and submitted to the County for review and approval. The development and implementation of the PMP shall include consultations with the County's Engineering Geologist as well as a requirement that the curation of all specimens recovered under any scenario shall be through an appropriate repository agreed upon by the County. If the County accepts ownership, the curation location may be revised. The PMP shall include developing a multilevel ranking system, or Potential Fossil Yield Classification (PFYC), as a tool to demonstrate the potential yield of fossils within a given stratigraphic unit. The PMP shall outline the monitoring and salvage protocols to address paleontological resources encountered during Project-related ground-disturbing activities, as well as the appropriate recording, collection, and processing protocols to appropriately address any resources discovered.

MM-PAL-2

At the completion of all ground-disturbing activities, the Project Paleontologist shall prepare a final paleontological mitigation report summarizing any monitoring efforts and observations, as performed in line with the PMP, and all paleontological resources encountered, if any. As well as providing follow-up reports and records for specific discoveries, as necessary.

HUMAN REMAINS – LEGAL REQUIREMENTS In the event that human remains are discovered during ground-disturbing activities, the proposed Project would be subject to California Health and Safety Code § 7050.5, CEQA Guidelines § 15064.5, and California PRC § 5097.98. If human remains are found during ground-disturbing activities, State of California Health and Safety Code § 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC § 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner shall be notified immediately. If the human remains are determined to be prehistoric, the County Coroner shall notify the NAHC, which shall notify a most likely descendant (MLD). The MLD shall complete the inspection of the site within 48 hours of notification and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials (National Park Service 1983).

Re: New Fleet Facility at 1400 South Grand Avenue Project, Orange County

To Whom It May Concern:

As requested, a record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed based on information submitted for the above referenced project. The results were positive. Please contact the Juaneno Band of Mission Indians and the Juaneno Band of Mission Indians Acjachemen Nation - Belardes on the attached list for more information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. As such, a SLF search is not a substitute for consultation with all tribes that are traditionally and culturally affiliated with a project's geographic area.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. If within two weeks of notification, a response has not been received, the Commission requests that you follow-up with a telephone call or email to ensure that the project information was received.

If you receive notification of a change of address or phone number from a tribe, please notify the NAHC so that we can assure that our lists contain current information.

In addition to engaging in tribal consultation, you should consult the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center to determine whether it has information regarding the presence of recorded archaeological sites within the project area.

If you have any questions or need additional information, please contact me at Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst

Verdantas Inc. (Verdantas) is pleased to present this Phase I Environmental Site Assessment (ESA) Report for the property located at 1400 South Grand Avenue in the city of Santa Ana, Orange County, California (Site). Verdantas declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312 and ASTM International (ASTM) Standard E1527-21.

Verdantas has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. Verdantas has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

If you have questions regarding this report, please contact us. We appreciate the opportunity to be of service to Chambers Group, Inc.

Respectfully submitted,

1.0 Introduction

1.1 Authorization

Verdantas Inc. (Verdantas) performed a Phase I Environmental Site Assessment (ESA) of the property located at 1400 South Grand Avenue in the city of Santa Ana, Orange County, California (Site – **Figure 1**). This Phase I ESA was prepared in accordance with the authorization of Chambers Group, Inc.

1.2 Purpose

The purpose of the Phase I ESA was to identify, to the extent feasible and pursuant to the processes prescribed in ASTM International (ASTM) Standard E1527-21, recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) in connection with the Site. The definition of RECs, HRECs, CRECs, and *de minimis* conditions presented below are in accordance with ASTM Standard E1527-21, the current United States Environmental Protection Agency (EPA) recognized standard for Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability protections.

RECs are defined, according to ASTM E1527-21 as: *“(1) the presence of hazardous substances or petroleum products in, on, or at a subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment”*.

HRECs are defined, according to ASTM E1527-21 as: *“a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitation)”*.

CRECs are defined, according to ASTM E1527-21 as: *“a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)”*.

De minimis conditions are defined by ASTM E1527-21 as *“a condition related to a release that generally does not present a threat to the human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is neither a REC nor a CREC”* (ASTM E1527-21, 2021).

1.3 Scope of Work

The scope of work was performed in accordance with Verdantas' Proposal for Phase I Environmental Site Assessment, dated February 5, 2025, and included the following tasks:

- ▶ A reconnaissance-level visit to the Site for evidence of the release(s) of hazardous materials and petroleum products and to assess the potential for onsite releases of hazardous materials and petroleum products;
- ▶ Records review (including review of previous environmental reports, selected governmental databases, and historical review);
- ▶ Interviews; and
- ▶ Preparation of this report presenting our findings.

Property-specific activities performed by Verdantas and information collected regarding these activities are summarized within this report. The findings of this Phase I ESA are presented in Section 7.0. Opinions and conclusions drawn by Verdantas, based on the information collected as part of the Phase I ESA, are presented in Sections 8.0 and 9.0, respectively. References are included as Appendix A. Site Photographs are presented in Appendix B. Interview forms are included in Appendix C. The Environmental Radius Report and Vapor Encroachment Screen is included as Appendix D. Historical documentation is provided in Appendix E.

1.4 Significant Assumptions

Verdantas assumes that the purpose of this Phase I ESA is for the potential sale of the Site. Verdantas also assumes that the information provided by the Client and its agents, regulatory database provider, and regulatory agencies is true and reliable.

1.5 Limitations and Exceptions

Verdantas performed the Phase I ESA of the Site in conformance with the scope and limitations of ASTM Standard E1527-21.

This Phase I ESA was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained through the Phase I ESA described herein. Opinions presented herein apply to property conditions existing at the time of our study and cannot necessarily be taken to apply to property conditions or changes that we are not aware of or have not had the opportunity to evaluate. It must be recognized that conclusions drawn from these data are limited to the amount, type, distribution, and integrity of the information collected at the time of the investigation, the methods utilized to collect and evaluate the data, and that a full and complete determination of environmental risks cannot be made. Although Verdantas has taken steps to obtain true copies of available information, we make no representation or warranty with respect to the accuracy or completeness of this information.

This practice does not address whether requirements in addition to all appropriate inquiry have been met in order to qualify for the landowner liability protections including the continuing obligation not to impede the integrity and effectiveness of activity and use limitations, or the duty to take reasonable steps to prevent releases. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the Site that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

1.6 Special Terms and Conditions

The scope of work for this Phase I ESA did not include testing of electrical equipment for the presence of polychlorinated biphenyls (PCBs) or collection of environmental samples such as soil, groundwater, air, building materials, paint, or other media; assessment of natural hazards such as naturally occurring asbestos, radon gas or methane gas; assessment of the potential presence of radionuclides; or assessment of nonchemical hazards such as the potential for damage from earthquakes or floods. This Phase I ESA also did not include an extensive assessment of the environmental compliance status of the Site or of businesses operating at the Site.

1.7 User Reliance

This report has been prepared for the exclusive use of and may only be relied upon by Chambers Group, Inc. and the County of Orange. This report cannot be relied upon by any other person or entity without Verdantas' prior express written permission.

1.8 Important Information about Geoenvironmental Reports

The User of this report are referred to **Appendix F** regarding important information provided by Geoprofessional Business Association (GBA) on geoenvironmental studies and reports.

2.0 Site Description

2.1 Location and Legal Description

The Site is located northwest of the intersection of South Grand Avenue and East Wilshire Avenue at the addresses of 1400 South Grand Avenue in the city of Santa Ana, Orange County, California (**Figure 1**). A second address of 1300 South Grand Avenue is also associated with the Site. The Orange County Assessor's Office has designated the Site as Assessor Parcel Numbers (APNs) 014-161-04 and 014-161-07 and portions of APNs 014-451-02, 014-161-05, 988-076-85, and 988-355-04.

2.2 Site Vicinity General Characteristics

The Site vicinity consists primarily of mixed commercial and residential properties. John Kennedy Elementary School is located directly to the northwest on the Site. Orange County offices, providing various services, are located north, east, and south of the Site.

2.3 Current Use of the Site

The Site is comprised of approximately 9.5 acres of land that is either undeveloped lawn or landscaped areas or developed as an asphalt-paved parking lot and drive aisles.

2.4 Descriptions of Structures, Roads and Other Improvements on the Property

The Site is partially developed with an asphalt-paved parking lot in the northeast portion and asphalt-paved, gated drive aisles traversing the Site from entrances on the north, via East McFadden Avenue, and on the east, via South Grand Avenue. The asphalt-paved parking lot is currently used by the adjoining Orange County offices to the east and north of the Site.

2.5 Current Uses of Adjoining Properties

Properties adjoining the Site are described in the table below.

PROPERTIES ADJOINING SITE		
Direction	Address	Company Name/Site Use
North	1300 E McFadden Ave	John F. Kennedy Elementary School Orange County Registrar-Voters
East	1300 S Grand Ave	Orange County Veterans Service Office FCc County of Orange
	1400 S Grand Ave	Orange County Real Estate Division 211 Orange County
South	S Santa Fe St 1343 E Wilshire Ave	Brasstech ADM Works

PROPERTIES ADJOINING SITE		
Direction	Address	Company Name/Site Use
West	Various	Mixed use railroad track, commercial, and residential.

3.0 User Provided Information

The User of this Phase I ESA is identified as the County of Orange. As a part of the ASTM E1527-21 process, Mr. Dave Ahern, Project Manager for Orange County Public Works, completed the User Questionnaire (**Appendix C**) for the Site on January 21, 2026. Information contained on the User Questionnaire is summarized below.

3.1 Environmental Liens or Activity and Use Limitations

Mr. Ahern was not aware of any environmental liens or AULs recorded for the Site.

3.2 Specialized Knowledge

Mr. Ahern does not have any specialized knowledge or experience with the Site or nearby properties.

3.3 Commonly Known or Reasonably Ascertainable Information

Mr. Ahern was not aware of any commonly known or reasonably ascertainable information related to the Site.

3.4 Valuation Reduction for Environmental Issues

Mr. Ahern indicated that there is no sale or transfer of ownership associated with this project.

3.5 Owner, Property Manager, and Occupant Information

The Site is currently owned and managed by the County of Orange. The Site is not occupied; however, the onsite asphalt-paved parking lot is utilized by the workers of the adjacent Orange County office.

3.6 Reason for Performing Phase I ESA

The reason for requesting this Phase I ESA is to satisfy the California Environmental Quality Act review process associated with the planned Grand Avenue Fleet Garage project.

3.7 Other

No other environmental documents were provided by the County of Orange for our review.

4.0 Records Review

4.1 Physical Setting Source(s)

Verdantas reviewed pertinent maps and readily available literature for information on the physiography and hydrogeology of the Site. A summary of this information is presented in the following subsections.

4.1.1 Topography

The Site is located within Section 18 of Township 05 South, Range 09 West of the San Bernardino Baseline and Meridian. The elevation of the Site is approximately 95 feet above mean sea level, and the topography is relatively flat. The topography of the surrounding vicinity gently slopes to the southwest.

4.1.2 Surface Water

Surface water was not observed on the Site. The Santa Ana River is located approximately 4 miles to the west of the Site.

4.1.3 Geology and Soils

The Site is situated within the central block of the Los Angeles Basin of southern California Peninsular Ranges Geomorphic Province. The Peninsular Ranges province extends approximately 900 miles southward from the Santa Monica Mountains to the tip of Baja California (Yerkes et al., 1965) and is characterized by elongated, northwest-trending mountain ridges and sediment-flooded valleys. The province includes numerous northwest-trending fault zones, most of which either die out, merge with, or are terminated by faults that form the southern margin of the Transverse Ranges province. The central block is filled with thousands of feet of sediment which is dissected by south-southwest trending rivers such as the Santa Ana River.

4.1.4 Hydrogeology

The Site is within the Costal Plain of Orange County Sub-basin (DWR Basin 8-001) and falls under the jurisdiction of the Santa Ana Regional Water Quality Control Board (Region 8). The area is part of the Santa Ana River Basin, which is characterized by alluvial deposits overlaying semi-consolidated sediment. Depth to groundwater typically ranges from 10 to 40 feet below ground surface. Groundwater flow is generally toward the southwest, following the regional gradient toward the Pacific Ocean. Groundwater in this area is used for municipal, agricultural, and industrial purposes (SWRCB, GeoTracker, 2025).

Review of the hydrogeologic information on the California State Water Resources Control Board's (SWRCB's) online database, Geotracker, which contains regulatory case files and information for nearby facilities that have undergone site assessment and/or remediation. Site-specific groundwater information was unavailable for the Site. Based on groundwater monitoring reports produced for the Pacific Western Containers facility located at 1535 Edinger Ave (approximately 0.5 miles southeast of the Site), groundwater in the Site vicinity ranges from approximately 26.60

to 44.81 feet below ground surface (bgs). Groundwater flow is anticipated to be towards the southwest.

4.1.5 Oil and Gas Fields

Verdantas reviewed the California Geologic Energy Management Division (CalGEM) Well Finder online database on November 17, 2025. No oil wells are located on the Site or adjacent properties.

4.1.6 Wetlands and Floodplains

The United States Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) maps (USFWS, 2025) were reviewed on November 17, 2025, to identify potential wetlands on or immediately adjacent to the Site that could be under the jurisdiction of the U.S. Army Corps of Engineers (USACE) (as defined in 33 Code of Federal Regulation [CFR] § 328.3, 40 CFR § 122.2, and any other applicable guidance). According to the USFWS NWI map, no wetlands are mapped onsite.

4.1.7 Radon

Radon is not regulated within the State of California. Nonetheless, the California Department of Public Health (CDPH) and EPA both recommend a threshold of 4 picocuries per liter (pCi/L) above which certain precautions be taken to mitigate radon buildup in structures.

The CDPH maintains a database of indoor radon levels that are sorted by zip code. According to the most recent update prepared in February 2016, 76 tests were completed in the Site zip code of 92705 and 5 exceeded 4 pCi/L. Since the percentage of overall tests that exceed 4 pCi/L is 6.6%, with a maximum detection of 6 pCi/L, there appears to be low potential for radon to adversely affect the Site.

4.2 Standard Environmental Record Sources

A search of selected government databases was conducted by Verdantas using the EDR Radius Map™ Report with GeoCheck® environmental database report system, dated October 28, 2025. Details and descriptions of the database search are provided in the EDR database report. The database report meets the government records search requirements of ASTM Standard E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. The database listings were reviewed within the specified radii established by the ASTM Standard E1527-21. A copy of this report is included in **Appendix D**.

4.2.1 Site

The Site address of 1400 Grand Avenue was identified in the EDR database report. Below is a summary of information included in the EDR database report.

BUSINESS	DATABASE SUMMARY FOR 1400 SOUTH GRAND AVENUE
Multiple Orange County Facilities	Several Orange County facilities are listed in the database report, associated with the address of 1400 South Grand Avenue. The databases include: Recovery Act Non-Generators/No Long Regulated (RCRA NonGen/NLR), Hazardous Waste Electronic Manifest System (E-MANIFEST), Hazardous Waste Tracking System (HWTS), Hazardous Waste Information System (HAZNET), Enforcement and Compliance History Online (ECHO), California Environmental Reporting System (CERS), CERS Hazardous Waste (CERS HAZ WASTE), CERS TANKS, and Underground Storage Tank (UST), UST FINDER, and Emissions Index (EMI). The information provided in the databases was reviewed and determined to be primarily associated with the Orange County offices, located adjacent to the north, east, and southeast of the Site. It should be noted that a 12,000-gallon diesel UST is located adjacent to the east of the southern portion of the Site. The UST is used by the adjacent Orange County Data Center and no records indicative of a release from this UST were identified as part of this Phase I ESA. These onsite database listings do not report a release of petroleum or other hazardous substances to the subsurface; therefore, it is our opinion that these listings are not considered a REC or environmental concern associated with the Site.

4.2.2 Offsite

Information in the EDR database report was reviewed for facilities of potential environmental concern to the Site. Additionally, the SWRCB Geotracker website and Department of Toxic Substances Control (DTSC) Envirostor website were used to supplement the information in the EDR database report.

NOTABLE LISTINGS	
LISTING NAME	ADDRESS / LOCATION
Markland Manufacturing Inc.	1111 E McFadden Ave. (approximately 50 feet north, across McFadden Ave)
Markland Manufacturing Inc. and Markland Industries, at the address of 1111 E McFadden Avenue, is listed in the CHROME PLATING, HWTS, HAZNET, Resource Conservation and Recovery Act Small Quantity Generators (RCRA-SQG), E-MANIFEST, perfluoroalkyl; and polyfluoroalkyl substances (PFAS), EMI, Waste Data System (WDS), CERS, Resource Conservation and Recovery Act Large Quantity Generators (RCRA-LQG), ENVIROSTOR, National Pollutant Discharge Elimination System (NPDES), California Integrated Water Quality System (CIWQS), and Enforcement and Compliance History Online (PFAS ECHO) databases. From 1978 to 2023, Markland operated a metal and plastic plating and manufacturing facility at the property. The Marland facility used one wetting agent, and two chemical fume suppressants: Chemguard S-151, Fumetrol 140, and HCA-8.4. During operation Markland had four plating lines and a wastewater treatment area. Wastewater from the facility included rinse water from various plating lines and water collected from sumps. The wastewater was treated onsite prior to discharge to the local sanitary sewer. On October 25,	

2019, the Santa Ana Regional Water Quality Control Board sent an order for the facility to comply with Water Code Sections 13267 and 13383 and required that Markland Manufacturing Inc. submit information regarding the accepted, stored, or used materials that may contain per- and polyfluoroalkyl substances (PFAS).

In January 2024 and March 2025, Apex conducted investigation activities to determine the presence of PFAS in soil, groundwater, and storm water at the property from historical plating activities. Analytical results of the soil identified PFAS higher than the reporting limit in 25 of the 49 samples at various depths. Groundwater samples identified 11 detected PFAS compounds. Apex collected three stormwater samples and PFAS concentrations were detected in these samples ranging from 2.3 to 1,400 nanograms per liter (ng/L). On April 1, 2025, the Santa Ana Regional Water Quality Control Board issued a no further action letter to Markland Manufacturing Inc. requesting no further investigation of PFAS at the property. On June 4, 2024, the EPA determined there were no RCRA violations identified at the facility.

Although this offsite database listing does report a release of PFAS, the concentrations identified in the subsurface soil and groundwater beneath the adjacent facility did not warrant further action and likely have no adverse impact on the Site.

Vironex Technical Services LLC

**1225 E McFadden Ave
(approximately 50 feet
north, across McFadden
Ave)**

This facility is listed in the EDR Radius Report under the names Vironex Technical Services LLC, Cascade Drilling, LP, Silco West Inc., A & L Furniture, and Chevron #9-3070 at the addresses of 1255 E McFadden Avenue, 1301 E McFadden Avenue, and 1126 S. Grand Avenue. The facility is listed in the RCRA NonGen/NLR, CERS HAZ WASTE, CERS, RCRA NonGen/NLR, E-MANIFEST, SWEEPS UST, HIST UST, LUST, UST FINDER RELEASE, CA FID UST, CORTESE, HWTS, HAZNET, HIST CORTESE, RCRA-SQG, FINDS, and ECHO databases.

1225 E McFadden Ave.

Vironex Technical Services LLC is listed in the NonGen/NLR database; no violations are noted. No other information is available. Cascade Drilling, LP is listed on the CERS HAZ WASTE, CERS, RCRA NonGen/NLR, and E Manifest. A violation I463 was issued on March 15, 2017, due to the observation of two 55-gallon drums of waste oil that did not have manifests available for review. Company returned to compliance by April 27, 2015. An E Manifest entry listed containers of non-RCRA hazardous waste including two 55-gallon metals drums with waste oil that were transported to World Oil Recycling. No violations were found.

1301 E McFadden Ave.

Silco West Inc. is listed on the LUST, CA FIND UST, Cortese, HWTS, HAZNAT, CERS, SWEEPS UST and HIST UST, which listed one tank with unleaded motor vehicle fuel, since June 1, 1988. A & L Furniture is listed on the LUST and UST Finder Release databases. On April 25, 2000, A & L Furniture identified a leak from the UST and an investigation at the facility found MTBE detections in groundwater. On June 21, 2000, Regional Board staff opened UST Clean Up Case No. 083003715T as evidence indicated an unauthorized release of gasoline had occurred at the facility. The groundwater sample collected at a depth of 36.5 feet below the surface contained MTBE at concentrations of 55.2 and 44.7 micrograms per liter (ug/l). Following assessment, the case was closed by the Regional Water Quality Control Board on October 24, 2006.

1126 S Grand Ave

Chevron Station #9-3070 is listed in the UST FINDER RELEASE, SWEEPS UST, CA FID UST, LUST, HIST UST, CORTESE, CERS, HIST CORTESE, RCRA-SQG, FINDS, and ECHO databases. Sweeps UST entry lists four tanks, with capacities ranging from 3,000-6,000 gallons and containing motor vehicle fuel.

In April 1992, all four tanks were removed from the property. Evidence of leaks originating from the USTs were evident during removal and additional soil excavation was required. In May 1992, about 65 cubic yards

of hydrocarbon-affected soil were excavated and removed from the property. In July 1993, about 735 cubic yards of additional hydrocarbon-affected soil were excavated and removed from the property.

The Regional Water Quality Control Board re-opened the Chevron case on October 28, 2003, as Case No. 083000109T; five wells were drilled to satisfy current MTBE investigation requirements. Soil samples were collected from the well borings and indicated similar concentrations of hydrocarbons that existed when the case was originally closed in 1994. The focus of the investigation was the potential risk to groundwater from MTBE and other volatile organic compounds. Groundwater monitoring was conducted from July 2004 until April 2006. On July 12, 2004, MTBE was detected in the groundwater sample collected from well MW2 at a concentration of 170 ug/l. This concentration was higher than the adjacent property (A&L Furniture), indicating that MTBE concentration decreased, down-gradient towards A & L Furniture. Based on the results of soil investigation and groundwater monitoring, no further action was recommended.

Although these offsite database listings do report a release of petroleum or other hazardous substances to the subsurface; it is our opinion based on the data reviewed that the offsite release has low potential to adversely affect the Site.

Beacon Sales Acquisition, Inc.

**1201 E McFadden Ave.
(approximately 50 feet
North, across McFadden)**

This facility is listed in the EDR Report under the names Beacon Sales Acquisition, Inc., Beacon Roofing Supply, All American Tackle, Inc, and Oceanworks Inc. at the addresses of 1201 E McFadden Avenue, 1013 S Hathaway, and 1009 S Hathaway. The facility was listed in the RCRA NonGen/NLR, E Manifest, RCRA-SQG, FINDS, ECHO, CERS HAZ WASTE, CERS, and RCRA-LGQ databases.

1201 McFadden Avenue

Beacon Sales Acquisition, Inc. was listed under the RCRA NonGen/NLR, and E Manifest databases. An E Manifest entry listed one container of non-RCRA hazardous waste including wooden boxes, cartons, and cases that were transported to Pacific Resource Recovery Service Inc. No violations were reported. An E Manifest entry, with the owner listed as Beacon Roofing, listed one container of non-RCRA hazardous waste including waste flammable liquids and N.O.S, (Petroleum Distillates) 3, Pgi, that were transported offsite. No violations were reported.

1013 S Hathaway

All American Tackle, Inc was listed under the RCRA-SQG, FINDS, and ECHO databases. The databases suggest there was a small quantity of non-RCRA hazardous waste generated at the facility. No further information is available.

1009 S Hathaway Street

Oceanworks Inc is listed under the CERS HAZ WASTE, CERS, RCRA-LGQ, FINDS, and ECHO databases. A CERS entry lists this facility as a hazardous waste generator, with hazardous waste treatment onsite. Several violations are recorded at the facility regarding failure to submit a map, failure to manage a recyclable material pursuant to HSC, failure to report program data electronically, failure to annually review and submit the business plan, failure to provide initial and annual safety training to all employees, and failure to submit an adequate emergency response plan and procedures for a release of hazardous materials. The Facility has a permanent EPA ID number, CAD981632052. There are no records of a release at this facility.

These offsite database listings do not report a release of petroleum or other hazardous substances; therefore, it is our opinion that these offsite database listings are not an environmental concern to the Site.

The remaining offsite listings identified in the EDR database report were reviewed and not found to pose an adverse risk to the Site at the time of this report preparation based on one or more of the following:

- ▶ Type of release (soil only impacts)
- ▶ Closure received from regulatory agency;
- ▶ Distance of the facility to the Site; and
- ▶ Direction of groundwater flow (southwest) and location of the facility to the Site (cross-gradient or down gradient).

The “orphaned summary of unmapped listings was also reviewed, and they did not appear to be located near and/or have the potential to adversely affect the Site.

4.2.3 Regulatory Agency Contacts

Verdantas researched other reasonably ascertainable, local, and regional regulatory agency records. Initial record search requests were submitted on November 19 and 26, 2025. The results are summarized below:

NATIONAL PIPELINE MAPPING SYSTEM (NPMS)
An online review of the NPMS pipeline database performed on November 26, 2025. No natural gas transmission pipelines, hazardous liquid pipelines, and no reported accidents (gas or liquids) are mapped on the Site or directly adjoining the Site.
SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (SCAQMD)
A request for records search was made to the SCAQMD using the associated Site addresses on November 19, 2025. The SCAQMD responded by indicating that records were found for the Site. Six permits were issued for the operation of an internal combustion engine, caterpillar, model No 3516 DITA, 2498 BHP, 16-Cylinders, Turbocharged/aftercooled, diesel fired, with a diesel particulate filter, sud-chemie Inc, model no envicat-DPF, and a data logging and alarm system, driving an emergency electrical generator. This permit was renewed annually for 6 years. On January 11, 2007, a violation was issued due to lack of maintaining engine operation log permit conditions. The facility needed to log all engine runs, with dates, start meter reading, stop meter reading and the reason for operation. None of the files provided indicate a release of petroleum or other hazardous substances; therefore, it is our opinion that files provided by the SCAQMD do not represent a REC or environmental concern associated with the Site.

DTSC/ENVIROSTOR

A request for records was made to the DTSC Cypress and Chatsworth offices using the associated Site addresses and APNs on November 19, 2025. Both DTSC offices (Cypress and Chatsworth) responded by indicating that no records were found for the Site. The DTSC Cypress office indicated that records were available for the Site in the DTSC's Hazardous Waste Tracking System (HWTS) database.

An online review of the HWTS database performed on November 19, 2025, revealed no listings associated with the Site or adjacent properties not previously reviewed in the EDR database report.

An online review of the DTSC Envirostor database on November 19, 2025, did not reveal any listings for the Site or adjacent properties not previously reviewed in the EDR database report.

ORANGE COUNTY HEALTH CARE AGENCY (OCHCA)

A request for records search was made to the OCHCA using the associated Site addresses on November 19, 2025. A review of files provided by OCHCA revealed numerous records associated with the diesel UST and other hazardous materials used at the adjacent Orange County Data Center. The records primarily consist of inspections, hazardous material business plans, UST tightness test results, and spill protection monitoring reports.

None of the files provided by OCHCA reported a release of petroleum or other hazardous substances; therefore, it is our opinion that files provided by OCHCA do not represent a REC or environmental concern associated with the Site.

ORANGE COUNTY FIRE AUTHORITY (OCFA)

A request for a records search was made to OCFA using the associated Site addresses. OCFA responded by indicating that the following records were found for the Site:

- A permit for flammable combustible liquids- Reissuance, issued 5/9/2018
- A permit for assembly, < 300 Occupants – Reissuance, issued 5/9/2018

None of the files provided by the OCFA reported a release of petroleum or other hazardous substances; therefore, it is our opinion that files provided by the OCFA do not represent a REC or environmental concern associated with the Site.

GEOTRACKER

GeoTracker, an online database maintained by the SWRCB which tracks regulatory data about underground fuel tanks, land disposal sites, and releases of hazardous materials that may threaten the public drinking water supply, was reviewed on November 26, 2025. No listings were found for the Site or adjacent properties not already discussed in section 4.2.2.

SANTA ANA REGIONAL WATER QUALITY CONTROL BOARD (SARWQCB)

A request for a records search was made to the SARWQCB using the associated Site addresses and APNs on December 8, 2025. The SARWQCB responded by indicating that no records were found for the Site.

4.2.4 Other Reports

Other reports and documents were not provided or reviewed for the Site.

4.2.5 Vapor Encroachment

Verdantas reviewed the Vapor Encroachment Screen (VES) produced using EDR's Vapor Encroachment Worksheet application that gathers regulatory database information from the accompanying Radius Report and allows the user to integrate groundwater information, regional geology, and other information to evaluate the concern for potential vapor encroachment from onsite activities and from adjacent properties. The VES application was designed by EDR to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E2600-22), also referred to as the Tier 1 VES, as defined by ASTM E2600-22.

Using the VES application, and all other information gathered during this assessment, there are no onsite or offsite listings or releases presenting a vapor encroachment concern to current or future industrial occupants of the Site. Vapor encroachment is not considered a concern for the Site.

4.3 Historical Use Information on the Property

Verdantas reviewed select historical resources to determine previous Site and surrounding property uses. These resources were reviewed for evidence of activities which would suggest the presence of hazardous substances at the Site, and to evaluate the potential for the Site to be impacted by offsite sources of contamination. Copies of historical resources used to assess past Site and adjoining property uses (i.e., topographic maps, aerial photos, city directories, etc.) are provided in **Appendix E**. The following is a summary of our review of those resources.

Info Type	Years	Source	Summary of Results
Topo Maps	1896	EDR	• 1896, 1901, 1902, 1932, and 1935: No structures, tanks, or other features are depicted in the Site. There are a few scattered residences to the north and east of the Site. The Southern Pacific railroad is depicted adjacent to the west of the Site. There are a few developed roads trending north-south and east-west, with one road directly to the north of the Site, which is present-day McFadden Avenue.
	1901		
	1902		
	1935		
	1942		
	1948		• 1948 and 1950: The Site is depicted as an orchard. Orchards and scatter residences are depicted on the surrounding properties. The Southern Pacific railroad is depicted adjacent to the west of the Site. McFadden
	1950		
	1972		
	1981		
	2012		

Info Type	Years	Source	Summary of Results
	2015 2018 2022		Avenue is depicted to the north of the Site and McClay Street (present-day South Grand Avenue) is depicted to the east of the Site. • 1972 and 1981: The Site is depicted as an orchard. There is significant development in the surrounding vicinity. Most notably, by 1972 there are four buildings to the south of the Site and two buildings to the east of the Site. These buildings are most likely for commercial use. By 1981, an additional commercial building is located to the east of the Site. • 2012, 2015, 2018, and 2022: By 2012, the maps no longer depict structures and only depict municipal facilities (i.e. fire departments and schools). No structures are depicted onsite.
Aerial Photos	1938 1946 1952 1963 1972 1977 1985 1989 1994 2002 2005 2010 2014 2018 2022	EDR	• 1938, 1946, 1952, and 1963: The Site and surrounding properties appear to consist largely of orchards with scattered residents. In 1938, an undeveloped road, oriented in the east-west direction, appears to run through the middle of the Site. Undeveloped roads are observed west and east of the Site. By 1963, developments are observed to the north, east, and west of the Site, and appear to be mixed residential and commercial use. • 1972 and 1977: Land use changes are not observed on the Site, and the surrounding properties continue to develop for mixed residential and commercial use. • 1985, 1989, and 1994: Orchards are no longer observed onsite, and the Site appears to be vacant land. Commercial/industrial development is observed on the surrounding properties to the north, east, west, and south of the Site. • 2002, 2005, 2010, 2014, and 2018: The Site is observed to be vacant land, asphalt driveways are located at the north and east entrances to the Site, as well as an asphalt parking lot on the southeast corner of the Site. The present-day commercial/industrial properties are observed to the north, east, and south of the Site. By 2014, the present-day solar panels are constructed to the east of the Site. • 2022: The Site and surrounding properties are observed to be developed with their present-day configuration and use.
Sanborn® maps	N/A	EDR	Sanborn maps were not available for the Site.
City Directories	1920-2022	EDR	A review of the City Directory Report revealed listings associated with Site address of 1400 South Grand Avenue. These listings are summarized below: 1400 South Grand Avenue: -Orgcoexec (2002) -Networkservs DIV (2002)

Info Type	Years	Source	Summary of Results
			-Lockheed Martin -Govplace -Govjobs Com INC -CEO / Network Services -ACS State & Local Solutions -Telmar Network Technology -R T Lawrence Corp -Executive Office IT Data Ctr -Credit Union of Southern CA -Chief Technical Architect Several surrounding addresses with commercial/industrial listings were included in the City Directory report. None of the listings reviewed for the Site revealed businesses of obvious environmental concern that have not already been summarized in Sections 4.2.2 and 4.2.3 of this report.

Summary of Historical Review – Historically, from at least the late 1930s through the mid-1980s, the Site was used as an orchard without structures, tanks, or other features observed onsite with the exception of an undeveloped road transecting the middle of the Site. In 2022, the Site was partially developed with the present-day asphalt-paved parking lot in the northeast portion of the Site.

From at least the late 1930s through the early 1950s, the adjoining properties consisted primarily of orchards. Between the mid-1960s and 2020, the adjoining properties were redeveloped with their present-day commercial/industrial structures. The Southern Pacific railroad is located adjacent to the west of the Site, operating from at least the late 1800s until present.

Copies of historical resources used to assess past Site and adjoining property uses (i.e., topographic maps, aerial photos, city directories, etc.) are provided in **Appendix E**.

5.0 Site Reconnaissance

5.1 Methodology and Limiting Conditions

On October 30, 2025, a representative of Verdantas, Ms. Faith Burkett, under the oversight of Ms. Brynn McCulloch, a licensed Professional Geologist, conducted a reconnaissance-level assessment of the Site, which consisted of observing and documenting existing conditions of the Site and nature of the neighboring development. Photographs of the Site are presented in **Appendix B**, and their view directions are noted on **Figure 2**. Items noted during the Site reconnaissance are also depicted in **Figure 2**.

5.2 General Property Setting

The Site vicinity consists primarily of mixed commercial and residential properties. John Kennedy Elementary School is located directly to the northwest on the Site. Orange County offices, providing various services, are located north, east, and south of the Site.

The Site is comprised of approximately 9.5 acres of land that is either undeveloped lawn or landscaped areas or developed as an asphalt-paved parking lot and drive aisles.

5.3 Exterior and Interior Observations

5.3.1 Hazardous Substances, Drums, and Other Chemical Containers

Hazardous substances, drums, and other chemical containers were not observed onsite.

5.3.2 Storage Tanks

No evidence of USTs or aboveground storage tanks (ASTs) was observed on the Site.

5.3.3 Polychlorinated Biphenyls (PCBs)

One pad-mounted transformer was observed along the east side of the Site (Figure 2, Photo 8). No indications of staining or leaking were observed on the concrete pad beneath and around the transformer. This transformer is not considered an environmental concern.

5.3.4 Waste Disposal

No hazardous waste is currently generated onsite. General municipal waste is stored in dumpsters located in the southeast corner of the Site (Figure 2, Photo 7) and removed on weekly basis by the City of Santa Ana contractor.

5.3.5 Dumping

No evidence of dumping, with the exception of minor amounts of windblown trash and debris (Figure 2, Photo 2) was observed onsite.

5.3.6 Pits, Ponds, Lagoons, Septic Systems, Wastewater, Drains, Cisterns, and Sumps

Evidence of pits, ponds, lagoons, cisterns, septic systems, wastewater, drains, and sumps was not observed on the Site.

5.3.7 Pesticide Use

Evidence of pesticide use was not observed on the Site.

5.3.8 Staining, Discolored Soils and Corrosion

Staining, discolored soils, and corrosion was not observed on the Site.

5.3.9 Stressed Vegetation

Evidence of stressed vegetation was not observed on the Site.

5.3.10 Unusual Odors

No unusual odors were detected on the Site.

5.3.11 Onsite Wells

No groundwater, oil, or gas wells were observed on the Site.

5.3.12 Other Observations

No other observations of environmental concern were noted during the Site reconnaissance.

6.0 Interviews

Verdantas attempted to conduct interviews with people having knowledge of current or past Site usage when possible. Interviews, if any, were conducted either orally or in the form of a written questionnaire.

6.1 Interview with Owner

As of the date of this report, a completed Owner Interview Form has not been received by Verdantas.

6.2 Interview with Property Manager

See Section 6.1.

6.3 Interviews with Occupants

The Site is unoccupied; therefore, interviews with Site occupants were not completed as part of this Phase I ESA.

6.4 Interviews with Local Government Officials

Verdantas did not interview employees with local government agencies to request information regarding historic and current uses of the Site with the exception of those noted in Section 4.2.3.

6.5 Interviews with Others

Verdantas did not conduct additional interviews for this Phase I ESA.

7.0 Findings

Verdantas performed a Phase I ESA of the of the property located at 1400 South Grand Avenue, Santa Ana, Orange County, California (Site – Figure 1) in accordance with the authorization of Chambers Group, Inc.

7.1 Onsite

Historically, from at least the late 1930s through the mid-1980s, the Site was used as an orchard without structures, tanks, or other features observed onsite with the exception of an undeveloped road transecting the middle of the Site. In 2022, the Site was partially developed with the present-day asphalt-paved parking lot in the northeast portion of the Site.

Currently, the Site is partially developed with an asphalt-paved parking lot in the northeast portion and asphalt-paved, gated drive aisles traversing the Site from entrances on the north, via East McFadden Avenue, and on the east, via South Grand Avenue. The asphalt-paved parking lot is currently used by the adjoining Orange County offices to the east and north of the Site. The remaining portions of the Site are undeveloped landscaped or lawn areas.

7.2 Offsite

From at least the late 1930s through the early 1950s, the adjoining properties consisted primarily of orchards. Between the mid-1960s and 2020, the adjoining properties were redeveloped with their present-day commercial/industrial structures. The Southern Pacific railroad is located adjacent to the west of the Site, operating from at least the late 1800s until present.

Currently, the Site vicinity consists primarily of mixed commercial and residential properties. John Kennedy Elementary School is located directly to the northwest on the Site. Orange County offices, providing various services, are located north, east, and south of the Site.

One 12,000-gallon diesel UST is located adjacent to the east of the southern portion of the Site. The UST is used by the adjacent Orange County Data Center and no records indicative of a release from this UST were identified as part of this Phase I ESA.

No offsite properties with environmental concerns that could present a risk to the Site were identified.

7.3 Data Gaps

ASTM E 1527-21 requires review of standard historical sources at approximate five-year intervals from at least 1940 to the present, or the earliest development of the Site. The availability of extensive historical information varies significantly between locations, and it is common to have gaps in the data for one or more of the periods where historical property uses are unknown or uncertain. There is also a potential for unidentified uses to have occurred between data points, or prior to the earliest acquired data.

The earliest data acquired for the Site regarding past property usage was from 1896. There

appear to be periodic data gaps in the documentation on the Site; however, these are considered unlikely to alter the conclusions or recommendations of this report based on the Site inspection, the EDR Radius Report reviewed, interviews, and other historical sources reviewed.

A completed Owner Interview Form has not been returned to Verdantas. Based on the information gathered during preparation of this Phase I ESA, this data gap is not considered significant and unlikely to alter the conclusions and recommendations of this report.

8.0 Opinion

8.1 Onsite

It is Verdantas' opinion that no onsite environmental concerns that represent RECs, HRECs, or CRECs were identified.

8.2 Offsite

It is Verdantas' opinion that no offsite properties with environmental concerns with potential to impact the Site were identified.

9.0 Conclusions and Recommendations

Verdantas has performed a Phase I ESA in conformance with the scope and limitations of ASTM Standard E1527-21 of the property located at 1400 South Grand Avenue, Santa Ana, Orange County, California. Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report. This assessment has revealed no evidence of RECs, CRECs, HRECs, or business environmental risks in connection with the Site.

Based on the findings of this Phase I ESA, Verdantas recommends no additional assessment.

10.0 Deviations

Verdantas did not deviate from or alter the scope of work, as defined in Section 1.3 of this report. Significant data gaps were not identified.

11.0 Additional Services

Verdantas did not perform work outside the scope of work as defined in Section 1.3 of this report.

12.0 Qualifications of Environmental Professionals

12.1 Corporate

Verdantas is a California corporation, providing geotechnical and environmental consulting services throughout California. We are solely a consulting firm without interests in real property other than our office locations in Southern California. We provide professional environmental consulting services including application of science and engineering to environmental compliance, hazardous materials/waste assessment and cleanup, and management of hazardous, solid and industrial waste. Phase I ESA are a part of this practice area and have been conducted by us.

12.2 Individual

The qualifications of Ms. Brynn McCulloch, Principal Geologist, and the other Verdantas environmental professionals involved in this Phase I ESA meet the Verdantas corporate requirements for performing Phase I ESAs as specified by ASTM Standard E1527-21. In addition, Ms. McCulloch is a Professional Geologist (PG).

12.3 Environmental Professional Statement

I declare, on February 19, 2026, that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional, as defined by §312.10 of 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Brynn McCulloch, PG
Principal Geologist

APPENDIX C

Phase I ESA Users Questionnaire

Project Name: Orange County Fleet Facility

Complete and Correct Address(es) of the Property and APN(s):

User Company Name:

Orange County Public Works

User Name/Title:

Dave Ahern, Project Manager

User Phone/Email: 714/667-4909

Interviewee Name and Relationship to Project:

Assistant Project Manager

Site Owner: County of Orange

Reason Phase I is required:

Not required

Type of property:

Commercial

Type of property transaction (e.g., Sale, purchase, exchange):

None

Any scope of services beyond the ASTM Practice E 1527:

N/A

All Parties that will rely on the Phase I report:

N/A

Name and Contact Information for Site Contact:

Dave Ahern

Any special terms or conditions:

N/A

Any other pertinent knowledge or experience with the property (e.g., prior reports, documents, correspondence concerning the environmental conditions of the property):

(1). Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? ☐ Yes | ☒ No

If Yes, Describe:

(2). Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? ☐ Yes | ☒ No

If Yes, Describe:

(3). Specialized knowledge or experience of the person seeking to qualify for the Landowners Liability Protections (LLP) (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ Yes | ☒ No

If Yes, Describe:

No Sale or transfer of ownership

(4). Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 DRF 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

☐ Yes | ☒ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? ☐ Yes | ☐ No

If Yes, Describe:

N/A there is no sale or transfer of ownership

(5). Commonly known or reasonable ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the property that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as user,

- (a.) Do you know the past uses of the property? ☐ Yes | ☒ No
- (b.) Do you know of specific chemicals that are present or once were present at the property? ☐ Yes | ☒ No
- (c.) Do you know of spills or other chemical releases that have taken place at the property? ☐ Yes | ☒ No
- (d.) Do you know of any environmental cleanups that have taken place at the property? ☐ Yes | ☒ No

If Yes, Describe:

(6). The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*? ☐ Yes | ☒ No

If Yes, Describe:

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/02/2025 has revealed that there are 4 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 10 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 25 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there are 4 RESPONSE sites within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/17/2025 has revealed that there are 34 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 37 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 15 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there are 102 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 06/23/2025 has revealed that there are 7 PFAS ECHO sites within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 3 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 22 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 06/02/2025 has revealed that there are 69 E MANIFEST sites within approximately 0.25 miles of the target property.

PFAS: A listing of PFAS sites included in the Envirostor and GeoTracker databases. Locations of potential sources of per - and polyfluoroalkyl substances (PFAS). This does not mean that PFAS has been produced, used, or discharged at these sites.

A review of the PFAS list, as provided by EDR, and dated 06/02/2025 has revealed that there is 1 PFAS site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CHROME PLATING: This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

A review of the CHROME PLATING list, as provided by EDR, and dated 06/02/2025 has revealed that there is 1 CHROME PLATING site within approximately 0.5 miles of the target property.

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 06/12/2025 has revealed that there are 23 Cortese sites within approximately 0.5 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there are 8 DRYCLEANERS sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 14 HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within

EXECUTIVE SUMMARY

approximately 1 mile of the target property.

SO CAL GAS/SANTA ANA	NEC OF MINNIE AND E	N 1/2 - 1 (0.796 mi.)	BD336	2270

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 413550
Site Name: ORANGE COUNTY DATA CENTER
Violation Date: 09-11-2019
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Returned to compliance on 08/24/2020. All DO reports (beginning from October 2018) have not been signed and dated by the UST Owner/Operator. The UST owner/operator must sign DO reports within 48 hours of being provided a signed copy by the DO. Submit a signed copy of the upcoming DO report (September 2019) to this agency within 30 days.

flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 03/15/2019. Per Overfill Prevention Equipment Inspection Report Form for test date 11/07/2018 flapper valve is set to activate at 98% of the tank capacity. Flapper valve must activate at 95% of tank's capacity. Repair/replace flapper valve to activate at 95% of tank capacity immediately and provide a copy of the test results to this agency within 30 days of testing. Notify this agency 48hrs prior to testing.

Eval General Type: Compliance Evaluation Inspection

Eval Date: 09-26-2024

Violations Found: No

Eval Type: Routine done by local agency

Eval Notes: On site to conduct a routine monitoring system certification inspection. The facility has the following double-walled tank: - Diesel (12,000-gal.) The UST system is monitored by a Gilbarco EMC. The monitor was operational for audible and visual alarms. Overfill prevention is provided by audible/visual alarm. The UST system is monitored as follows: - Tank interstitial: VR-409 - Piping sump: VR-208 - Transition sump: VR-208 Testing was conducted by Carlos Arana of Verdugo Testing Company. Technician certifications (ICC, VR) were verified on site. All sensors were determined to be functional. Spill buckets passed testing. The following documents were available for review: - Monitoring plan, response plan, certificate of financial responsibility (09/28/2023) - DO training records, DO monthly reports, and maintenance receipts - Last monitoring system certification: 09/28/2023 - Last secondary containment test: 09/28/2023 - Last OFP test: 09/14/2021 UST permitting documents have be

Eval Notes: Email correspondences with Melvern Maraj regarding reporting method for lead-acid batteries. See below: Hi Mel, This is Minh Le from OC Environmental Health. I was on site at the Data Center last week for a hazardous materials business plan inspection and we had discussed how you can report the lead acid batteries. The following document is a guideline on how to report lead-acid batteries:
<http://www.calepa.ca.gov/CUPA/Bulletins/2011/April28.pdf> You will need to obtain a copy of the SDS sheet and follow the sample chemical description page in the document above to report the lead-acid batteries stored on site. I will be emailing you the inspection report either later today or tomorrow. The only deficiencies noted will be the missing batteries and the corrosion inhibitor from the inventory page. Once you determine the amount of sulfuric acid stored in the batteries, please go online and make the necessary updates. Any questions feel free to contact me. [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-14-2021
Violations Found: Yes
Eval Type: Routine done by local agency

Eval Notes: Onsite to conduct a routine Underground Storage Tank inspection and witness an annual Monitoring System Certification and Spill Container testing. The Overfill Prevention Equipment Inspection was also conducted on this dated. Testing was conducted by Carlos Arana, Verdugo Tank Testing. Veeder Root: Expires: 4/28/2022 ICC: Expires: 12/7/2022 Submit test results to this Agency within 30 days. The facility has one double walled tank, (12k diesel tank) monitored by a Gilbarco EMC panel. The panel is operational for audible visual alarms. The diesel system operates using double walled conventional suction piping. The tank annular is dry and is monitored by VR409 sensor. The piping/fill sump is monitored by VR208 sensors. The vent transition box is monitored by a VR208 sensor. When sensors were submerged in water they triggered an alarm. The tank system utilizes Audible Visual Alarms for overfill prevention. The following documents were reviewed onsite: of [Truncated]

Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 10-22-2013
Violations Found: No
Eval Type: Other, not routine, done by local agency

Eval Notes: This Agency received a monitoring system certification dated 9/18/2013 for the Gilbarco EMC monitoring system. The following equipment was certified to have been inspected/serviced in accordance with manufacturer's guidelines and was operational per manufacturer's specifications: in-tank gauging probe; annular space sensor; piping sump sensor; tank overfill/high level sensor; and, piping transition sump sensor. Also included was a plot plan of facility showing location of tanks and monitoring equipment and a spill bucket testing report form dated 9/18/2013 with PASS results.

CERS:

Name: ADM WORKS
Address: 1343 E WILSHIRE AVE
City,State,Zip: SANTA ANA, CA 92705
Site ID: 513211
CERS ID: 10566997
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 513211
Site Name: ADM WORKS
Violation Date: 01-14-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 06/07/2021. Facility is storing hazardous materials over reportable quantities on site and has not electronically submit a Hazardous Materials Business Emergency Plan (HMBEP). Business must immediately submit the HMBEP to this Agency via the California Electronic Reporting System <http://cers.calepa.ca.gov/>. A follow-up inspection will be conducted in 30 days.
Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 513211
Site Name: ADM WORKS
Violation Date: 01-10-2019
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of

S113158472

Violation Notes: hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days. Returned to compliance on 02/07/2019. Observed two (2) 55-gallon drums of waste oily water/spent machine coolant without accumulation start dates. Per Mr. Garcia, the waste has accumulated over 180 days. This facility is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days. Immediately dispose of hazardous waste that has been stored over the applicable time limit and provide a hazardous waste manifest. The manifest may be submitted to Jesse Ruiz at JRuiz@ochca.com.

Violation Division: Orange County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 513211
Site Name: ADM WORKS
Violation Date: 02-03-2022
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 03/25/2022. Hazardous materials training records were not available for review at the time of the inspection. Corrective action: Ensure that hazardous materials training records are available for review during inspections. Within 30 days, provide this Agency with documentation that employees are trained annually.

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 01/10/2019. Observed one (1) 55-gallon drum of waste oily water/spent machine coolant without a hazardous waste label. Immediately label all hazardous waste containers with the following information: "Hazardous Waste", name and address of the waste generator, contents of the container, physical and chemical characteristics of the hazardous waste, and the accumulation start date. Corrective Action Taken: A hazardous waste label was provided, filled out, and attached to the hazardous waste drum. The violation was corrected at the time of the inspection.

Environmental Interest/Information System:

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Citation: 22 CCR 45 67450.3(c)(9)(A) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(A)

Violation Description: Failure of an owner or operator to obtain a detailed chemical and physical analysis of a representative sample of the waste, which includes all information necessary to manage waste in accordance with the requirements, and to meet LDR requirements; Failure to analyze wastes according to the frequency specified in the plan and to retain waste analysis documentation for three years.

Violation Notes: Returned to compliance on 02/14/2020. The Waste Analysis Plan (WAP) was reviewed and determined to be inadequate: -Waste Analysis Records: per Mr. Gutierrez facility has not sampled all of the points of generation that enter into treatment units -Sampling Management Methods: WAP indicates different waste can be mixed before sampling. Waste entering treatment units should be sampled from the point of generation and not combined. Combining waste will not allow for accurate determination of hazardous characteristics. -Testing Frequency: current WAP indicates analysis will be conducted on a quarterly basis; facility is not currently conducting quarterly analysis Update WAP to include all missing required information and provide a completed copy to this agency by February 17, 2020.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-29-2022
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes:

On site to conduct a routine Tiered Permitting (Permit by Rule) inspection. Accompanied by Susan Berg of OCHCA. Consent to enter and inspect granted by Ricardo Gutierrez, Facility Manager. The facility has 3 PBR treatment systems, 1 CESW treatment system, and a hazardous waste recycling operation. The three PBR units use batch treatment for acid waste, alkaline waste, and regen waste. The treatment unit utilizes the following processes: pH adjustment, precipitation, and filter press for all three units. Mr. Gutierrez confirmed that there have been no changes to the system and no releases in the previous three years. The treatment system is labeled with the required facility information. The following documents were available for review: inspection logs, inspection schedule, waste analysis plan, waste analysis records, closure plan, sewer agency discharge records, and PE certification for hazardous waste tanks and secondary containment dated 5/29/2018. Please note, hazardous waste

Eval Date: 03-30-2021
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewed the submittal dated 2/26/2021 for the following sections: Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans. The Hazardous Materials Inventory was Not Accepted. Violation I736 was observed to be corrected, the Emergency Response Plan was submitted and accepted. Violation I169 is still outstanding. Make the following corrections: -Tri chrome- reported below threshold reporting quantity. If less than 55 gallons is stored on site, this material is not required to be reported. -Propane- change the physical state to liquid -Nitric acid- Nitric acid: This material should be reported as an EHS. If the solution is 400 gallons at a concentration of 34%, there is 136 gallons of pure Nitric acid. Pure Nitric acid weights approximately 10 lbs per gallon, the result would be approximately 1,360 pounds of Nitric acid, which is above the TPQ for reporting as an EHS. Eval Date: 11-29-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine Recycler inspection. Accompanied by Susan Berg, Supervising Hazardous Materials Specialist. Consent to enter and inspect granted by Ricardo Gutierrez, Facility Manager. The facility operates plating lines that utilize nickel/trivalent chromium and Copper plating solutions. In order to keep the plating baths at specification, Ni/Cr process baths are transferred to a filtration unit in the waste water treatment area. The spent process baths are placed in holding tanks and pumped through a carbon filter. The purification process removes nickel and copper from the solutions, which is transferred from the trivalent chromium regeneration tank to the plating line. The facility is recycling the trivalent chromium solutions in accordance with HSC 25143.2(C). CERS ID 10761832 has not submitted the Recyclable Materials Report for the period of 1/1/2020 through 12/31/2021. This report must be submitted via CERS by July 1st of even-number years. Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 04/29/2020. The Hazardous Materials Inventory in CERS is inaccurate/incomplete. Please apply the following changes: (1) New Motor Oil - Remove the State Waste Code - Remove the Annual Waste Amount value (2) Wash Sump Waste - Select all applicable Hazard Categories from the list of 24 hazards - Enter a value for Days On Site (typically 365 days) (3) Argon & Argon/Carbon Dioxide gases - Verify the Maximum Daily Amount for both inventory items. If the Maximum Daily Amount is below 1,000 cubic feet for each, the materials may be removed from the inventory (4) Potassium Bicarbonate - Verify the Maximum Daily Amount. If the Maximum Daily Amount is below 500 pounds, the material may be removed from the inventory. Update and resubmit the inventory via CERS within 30 days.

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-06-2024
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous materials business plan (HMBP) inspection. Consent to inspect the facility was granted by Justin Mulford. Observed the facility, perimeter, and hazardous materials storage areas. The following materials were observed at disclosable quantities: - Bentonite - Concrete (approx. 3,000-lbs.) - Hydraulic oil (2 x 55-gal. containers) - Hydrogen (1 x 261-cu. ft. container) - Oxygen (2 x 124-cu. ft. containers; 248-cu. ft. total) - Propane (2 x 7-gal. containers) - Used oil (2 x 55-gal. containers) Verified HMBP components submitted in the California Environmental Reporting System (CERS). Annual employee hazardous materials training records were reviewed. No violations were noted at the time of inspection. A copy of this report has been emailed to awesaw@cascade-env.com and jmulford@cascade-env.com.

waste storage area(s). This facility currently generates the following hazardous waste: - Used motor oil (1 x 55-gallon drum) - Used oil filters (1 x 5-gallon container) Per Mr. Vargas, hazardous waste storage area(s) are currently inspected at least weekly. The emergency response plan was available for review. Hazardous waste containers were closed and properly labeled. Employees are reported to be trained. A copy of this inspection report will be sent to: cvargas@cascade-env.com

Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 04-28-2020
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes:

The business has been identified to store hazardous materials on site above reporting thresholds (55 gallons of a liquid, 500 pounds of a solid, 200 cubic feet of a compressed gas) and is required to annually certify the Hazardous Materials Business Plan (HMBP) via the California Environmental Reporting System (CERS) at <http://cers.calepa.ca.gov/>. A copy of this report will be emailed to: - Chris Vargas, Operations Manager <cvargas@cascade-env.com> - Brook King, Environmental Contact <bking@cascade-env.com> - Alex Amort, Director DOT Compliance <aamort@cascade-env.com>

Eval Notes:

Vironex Technical Services 1225 E. McFadden Ave. Santa Ana, CA 92705
INSPECTOR COMMENTS: On site for a routine hazardous waste inspection. Consent to enter and conduct inspection activities was provided by Sean Tannehill, Business Unit Manager. Business ownership information was verified. The current number of employees is Walked throughout the facility. Observed hazardous waste storage areas. Observed two 55 gallon drums of waste oil. Drums were observed to be closed and labeled. Manifests were not available for review, violation cited. Employees are reported to be trained. Emergency plan is posted in the warehouse. A perimeter walk was conducted and the dumpster enclosure was observed. No evidence of illegal dumping were noted. A Certificate of Return to Compliance (CRC) has been issued. Correct all violations listed in this report within 30 days and provide this agency a signed copy of CRC.

Eval Notes:

VIRONEX CO0057433 On Thursday 4-23-14 John Ralls of OCHCA was at the Vironex site and referred the incident to OCHCA HMMS and Mark Sutphin was notified. 4-23-14 I ,Mark Sutphin spoke with Javier Perez the National Director of Health and Safety for Vironex he said that he saw his employees on Tuesday 4-21-15 rinsing out an empty tote to the back of the property and the rinse water contaminated with a soy bean oil product was going down the gutter to the storm drain. He had his employees stop but he did not report it at the time. On Thursday 4-23-14 John Ralls of OCHCA was at the site and referred the incident to OCHCA HMMS and I was notified. I notified Duc Nguyen of OC public works and notified him of the reported release. I went to the site and spoke with Javier Perez . I observed the staining in the back lot of the business and the staining in the gutter towards the west on Mc Fadden Street. I reviewed the SDS the indicated that the material was a soy based [Truncated]

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

recycling waste paint and thinner on site, and waste water-based paint thinner, are stored over the maximum accumulation time. This facility is a Conditionally Exempt Small Quantity Generator, and the maximum accumulation time is 180 days after first 100 kg is generated. For Satellite Accumulation, the maximum accumulation time is one year or 55 gallons, whichever is reached first. Properly dispose of hazardous waste stored over maximum accumulation times.

Eval Notes: Not reported
Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-21-2024
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Consent to inspect the facility was granted by Leno Gutierrez. Observed the facility and its hazardous waste storage areas. The facility generates the following hazardous waste: - Used oil (1 x 30-gal. container) - Antifreeze (1 x 30-gal. container) - Waterborne waste (1 x 30-gal. container) - Paint waste, solids (1 x 30-gal. container) - Paint waste, liquids (1 x 30-gal. container) Hazardous waste containers were observed to be stored closed. Hazardous waste containers were observed to be missing required information. Mr. Gutierrez labeled all containers with the required information during the inspection. No hazardous waste was observed in the facility dumpster. Emergency response information was available on site. Hazardous waste manifests were available for review. A copy of this report has been emailed to lgutierrez@dealersserviceinc.com.

Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 05-30-2024
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: The purpose of this off-site reinspection is to follow up on the violation cited on the 05/21/2024 inspection report. A copy of a uniform hazardous waste manifest was received by this agency. Hazardous waste that exceeded its accumulation time was hauled offsite on 05/24/2024. Violation 3030010 has been corrected. No outstanding violation is pending. A copy of this report was emailed to lgutierrez@dealersserviceinc.com.

Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-23-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for a recycling inspection. Leno Gutierrez, manager, granted me permission to inspect and accompanied me on the inspection. This business is an automotive collision, repair and painting shop. Waste paint thinner and paint generated on site are distilled in a "SideWinder" solvent still on site to recover cleaning solvent for re-use on site. Currently, the still is not operational and is being sent out for repair. Recycling volume is below the 27 gallons/month recycle program threshold. If greater than 27 gallons/month is recycled, a biennial recycling report must be completed and submitted

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-30-2015
Violations Found: No
Eval Type: Routine done by local agency

Eval Notes: On site for a hazardous waste recycling inspection. Leno Gutierrez was present for the inspection. Observed the distillation recycling machine. Per Mr. Gutierrez, facility processes approximately 5 gallons of spent solvent weekly. A solid "puck" or "pattie" is generated from the process which is managed as hazardous waste. The resulting clean solvent is reused on site. Discussed biennial reporting requirements with Mr. Gutierrez if facility exceeds 27 gallons per month.

Eval Division: Orange County Environmental Health
Eval Program: HWRecycler
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-30-2015
Violations Found: No
Eval Type: Routine done by local agency

Eval Notes: On site for a routine hazardous waste inspection. Observed facility and inspected hazardous waste storage areas. Permission to conduct inspection was granted by Leno Gutierrez. Facility generates the following hazardous wastes: waste oil, waste coolant, waste water-based paint and waste paint sludge (puck generated from the recycling of the solvent). Hazardous waste containers were stored closed and properly labeled. Containers appeared to be in good condition. Manifests were available for review. Facility is currently assigned and using active EPA ID# CAL000293738. Paint booth filters were tested on 4/11/13 and determined not to be hazardous. A copy of the test results were available on site. If paint manufacturer(s) or formulations change in the future, another analysis for metals will need to be performed. Emergency information is posed in the employee area. Inspected perimeter of the facility and the dumpster area.

Eval Date: 10-30-2015
Violations Found: No
Eval Type: Routine done by local agency

Eval Notes: On site for a routing hazardous materials disclosure and business emergency plan inspections. The inspection was conducted with Leno Gutierrez, Store Manager. Facility has downsized its storage containers of waste acetone, waterborne paint waste, and waterborne cleaning solution. The solid paint waste generated by the recycling process has also been reduced to below reporting threshold limits. Observed on site the following materials in reportable quantities: argon/CO2 gas cylinders. Assisted facility with electronic submission of this material. Site map appears to be accurate. Annual BEP training is conducted. The electronic submittal was previously reviewed by this Agency and needed corrections were noted. Facility has changed out storage of materials to containers below 55 gallons. Reduced volumes were verified. Facility has disclosed two chemicals. A walk through of the facility was conducted with Gus. Site map appears to be accurate. No other [Truncated]

Eval Notes:

A routine hazardous waste inspection was conducted. Leno Gutierrez, manager, granted me permission to inspect and accompanied me on the inspection. This business is an automotive collision, repair and painting shop. The vehicle preparation shops, the paint department, the hazardous materials storage areas, outside perimeter areas, and trash dumpster were inspected. No hazardous waste observed in dumpster. Drums of hazardous waste were stored closed and labeled with required hazardous waste information. Manifests for hazardous waste disposal were maintained on site and were available for review. A hazardous waste emergency response plan was posted on the wall of the employee break room. Laboratory analytical results for waste paint booth exhaust filters dated 4/11/2013 were on site and were reviewed. EPA Method 3050B was used to analyze the waste and all metals detected in waste were below California TTLC limits. Results for zinc were 3130mg/kg, and this waste was [Truncated]

Eval Notes: Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During the months of August and December of 2013, the OC CUPA sent out letters to regulated businesses requesting them to electronically submit their HMD/BEP forms. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a username and password and submit your HMD/BEP forms within the next 30 days. Businesses may also submit forms via the California Environmental Reporting System. Please verify that all owner information that is prepopulated on the E-Submit Portal is still accurate. Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: Returned to compliance on 05/26/2016. The site map must be updated to correctly identify all the required elements and reflect the current layout of the hazardous materials storage on site. Business must update and re-submit the HMBEP to this Agency via Orange County e-Submit Portal <https://www.esubmit.ocgov.com/home/> or the California Electronic Reporting System <http://cers.calepa.ca.gov/>. A follow-up inspection will be conducted in 30 days.

Violation Description: Section(s) 25143.9
Failure to manage a recyclable material pursuant to HSC 6.5
25143.2(b), (c), or (d).

Violation Notes: Returned to compliance on 03/04/2022. The facility failed to submit
the Recyclable Materials Report on CERS by the due date 7/1/2020 for
the period 1/1/2018-12/31/2019. Corrective action: Immediately submit
the Recyclable Materials Report on CERS for the period of
1/1/2018-12/31/2019. Within 30 days, notify this Agency that the
report has been submitted on CERS.

Violation Program: HWRecycler
Violation Source: CERS,

Site ID: 414614
Site Name: OCEANWORKS INC
Violation Date: 10-26-2021
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter
6.95, Section(s) 25508(a)(3)

Violation Description: Failure to report program data electronically.

Violation Notes: Returned to compliance on 05/08/2023. The facility failed to disclose
that it generates hazardous waste and recycles more than 100 kilograms
per month of excluded or exempted recyclable materials. Corrective
action: Immediately disclose, on the Business Activities Page, that
the facility generates hazardous waste, recycles more than 100 kg of
excluded recyclable material per month and list the facility's EPA ID
number. Within 30 days, notify this Agency that the updated Business
Activities section has been submitted on CERS.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Walked the facility with Jim Hodges, President. The ownership was confirmed as OCEANWORKS INC and the number of employees as 5. The facility has registered for a permanent EPA ID number, CAD981632052. The facility is a surfboard manufacturer than uses acetone to clean resin off of equipment. The spent acetone is collected and taken to a still to be recycled daily. Jim stated that approximately 4 gallons of spent acetone are recycled per day. The recycled acetone is reused on site in the same process that generated the waste. A copy of this report was sent to jimhodges@mac.com.
