RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

ORANGE COUNTY FLEET FACILITY
1400 SOUTH GRAND AVENUE
SANTA ANA, CA 92705

TARGET PROPERTY COORDINATES

Latitude (North):	33.730528 - 33° 43' 49.90"
Longitude (West):	117.853222 - 117° 51' 11.60"
Universal Transverse Mercator:	Zone 11
UTM X (Meters):	420956.0
UTM Y (Meters):	3732411.2
Elevation:	92 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50006231 TUSTIN, CA
Version Date:	2022

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

TUSTIN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile South
Site Name:	HOLCHEM DBA SERVICE CHEMICAL
Site EPA ID Number:	CAT000612333
Surficial Aquifer Flow Dir.:	SE IN THE SHALLOW (SEMI-PERCHED) AQUIFER.
Measured Depth to Water:	less than 50 feet.
Hydraulic Connection:	The site is underlain by several aquifers. A clay layer separates the shallow (semi-perched) and lower fresh water aquifers, but its thickness and extent at the site are not known.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CHINO

Soil Surface Texture: silty clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	24 inches	silty clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	24 inches	59 inches	sandy clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: MOCHO

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	31 inches	loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	31 inches	61 inches	loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing

Department of Conservation

Telephone: 916-445-9686

Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservation's Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The Click here to access additional FINDS: detail in the EDR Site Report. database contains <http://www.edrnet.com/srf2/FinalSiteReport.aspx?ID=4tF446tWLFwz2l847X6..9HLWfELKN3CgwI2z8Y2QHIVm8JH7887yCX2i5id.7k.P8A3CHJnLEkA8qftsEAf3C2KFwNUX4GstRvFT02Y94Ls6tS8sDWssLGL3y4w95zzX2Jzl9q8fv4sz72xXR.AA5.RS.G.4qeH8TLel7JmfaUETH4HCT5nF5T3cf4VK6R72v4Wfcl0uAgowKUzub3zeIVu8SX7Es74PX7F5gj.YC.go2dlHrRLeB9yHfhpEwJARzKMCN7p18vC8xgUe4LqIM52VDueb8ZCYqG4KgtvJF7z3NI4zb6DY2jUWJfLQt3fTwTRzDH22xl.N8zZ4DM7xaXTl828.bh.Q.9uSHFhLOSashf6IEan3xkKGLNsK2wNCwrgrT8arlQN2eA5cs8B2YMh2> additional records for this site. Violations:

Site ID: 413550
 Site Name: ORANGE COUNTY DATA CENTER
 Violation Date: 04-02-2019
 Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
 Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
 Violation Notes: Returned to compliance on 03/17/2020. The business failed to update the business plan when handling previously undisclosed hazardous materials. Update the Hazardous Materials Inventory section within 30 days via the California Environmental Reporting System (CERS) to include the following hazardous materials which meet or exceed reportable quantities (55 gallons or more for liquids, 500 pounds or more for solids, 200 cubic feet or more for compressed gases): - Nalco ST70 - Nalco 7330 CERS can be accessed at <https://cers.calepa.ca.gov/>.
 Violation Division: Orange County Environmental Health
 Violation Program: HMRRP
 Violation Source: CERS,
 Site ID: 413550
 Site Name: ORANGE COUNTY DATA CENTER
 Violation Date: 09-11-2019
 Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
 Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
 Violation Notes: Returned to compliance on 08/24/2020. All DO reports (beginning from October 2018) have not been signed and dated by the UST Owner/Operator. The UST owner/operator must sign DO reports within 48 hours of being provided a signed copy by the DO. Submit a signed copy of the upcoming DO report (September 2019) to this agency within 30 days.

MAP FINDINGS

ORANGE COUNTY DATA CENTER, 1400 S GRAND AVE, SANTA ANA, CA 92705 (Continued)

Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 10/23/2023. UST Designated Operator (DO) inspection reports dated 9/12/2023 - 10/13/2022 had incorrect test dates of 9/09/2022 for the last monitoring system certification and spill container testing performed under Section 10 (Testing and Maintenance) of the form ; the correct test date is 9/19/2022.

Eval Notes:	Email correspondences with Melvern Maraj regarding reporting method for lead-acid batteries. See below: Hi Mel, This is Minh Le from OC Environmental Health. I was on site at the Data Center last week for a hazardous materials business plan inspection and we had discussed how you can report the lead acid batteries. The following document is a guideline on how to report lead-acid batteries: http://www.calepa.ca.gov/CUPA/Bulletins/2011/April28.pdf You will need to obtain a copy of the SDS sheet and follow the sample chemical description page in the document above to report the lead-acid batteries stored on site. I will be emailing you the inspection report either later today or tomorrow. The only deficiencies noted will be the missing batteries and the corrosion inhibitor from the inventory page. Once you determine the amount of sulfuric acid stored in the batteries, please go online and make the necessary updates. Any questions feel free to contact me. [Truncated]

MAP FINDINGS

ORANGE COUNTY DATA CENTER, 1400 S GRAND AVE, SANTA ANA, CA 92705 (Continued)

Eval Notes:	Secondary Containment Testing on 7/27/21 at 8AM.
Eval Division:	Orange County Environmental Health
Eval Program:	UST
Eval Source:	CERS,
Eval General Type:	Other/Unknown
Eval Date:	08-21-2018
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	This agency has received and reviewed the Secondary Containment Test (SB989) report dated 7/16/18. The results indicates that all components were tested and passed.
Eval Division:	Orange County Environmental Health
Eval Program:	UST
Eval Source:	CERS,
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	09-15-2016
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site for a monitor certification and routine inspection. This site has one double walled tank with double walled piping. Observed the tank sump. No standing water observed and the sensor is at the lowest possible point. No testing was witnessed today by this agency due to a previously scheduled tank installation at another site which required this agency to leave this inspection early. The following documents are available for review: - UST operating permit - Certification of financial responsibility dated 1/14/16 and CFO letter - UST response plan - UST monitoring plan - UST plot plan - Owner statements of designated UST operator - expiration dated 3/11/18 - Monthly DO reports with alarm history - Employee training records are current - Monitor certification dated 9/17/15 - SB989 dated 7/16/15 - Spill bucket tests dated 9/17/15 - Service tickets, work orders - No alarms since the last inspection
Eval Division:	Orange County Environmental Health
Eval Program:	UST
Eval Source:	CERS,
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	09-18-2013
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Mechanical inspection with Ron Lemas, who provided consent to perform an inspection and take pictures as necessary, of the underground tank system & records. Verified the facility has one regulated double walled UST with double walled suction AO Smith fiberglass pipe, a transition sump with single walled steel aboveground piping exiting the sump outside the building. The tank has both a flapper valve and high level alarm. The Gilbarco EMC monitor and all sensors and probes were tested for functionality--all PASS The single walled steel piping outside the building has no containment is exposed to the elements until the piping enters the generator room. The aboveground system outside the building has no containment and was approved by Santa Ana Fire in 2011. Personnel visually monitor all aboveground piping when the generator runs. Spill bucket was hydrostatically tested but not witnessed. Per Ron Lemas, all UPC forms, CFR are loaded onto the portal. Reviewed [Truncated]
Eval Division:	Orange County Environmental Health
Eval Program:	UST
Eval Source:	CERS,
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	09-19-2018
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site for routine UST inspection, monitoring system certification, and spill bucket testing. The facility has one double-walled tank (D) monitored by a Gilbarco EMC system. The site has double-walled suction piping and is used as a back-up generator. Audible and visual alarms are used for overfill prevention. Testing was conducted by James Romero of Verdugo. Tester certifications (VR, ICC) were verified. Please submit the test reports to this Agency within 30 days. Secondary containment testing was last conducted on 7/16/18. It must be tested every 36 months.

Violations:

Site ID:	513211
Site Name:	ADM WORKS
Violation Date:	01-14-2019
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 06/07/2021. Facility is storing hazardous materials over reportable quantities on site and has not electronically submit a Hazardous Materials Business Emergency Plan (HMBEP). Business must immediately submit the HMBEP to this Agency via the California Electronic Reporting System http://cers.calepa.ca.gov/ . A follow-up inspection will be conducted in 30 days.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 02/07/2019. Observed two (2) 55-gallon drums of waste oily water/spent machine coolant without accumulation start dates. Per Mr. Garcia, the waste has accumulated over 180 days. This facility is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days. Immediately dispose of hazardous waste that has been stored over the applicable time limit and provide a hazardous waste manifest. The manifest may be submitted to Jesse Ruiz at JRuiz@ochca.com .

Evaluation:

Eval General Type: Compliance Evaluation Inspection
 Eval Date: 02-02-2022
 Violations Found: Yes
 Eval Type: Routine done by local agency
 Eval Notes: On site for routine hazardous materials and business emergency plan inspection. The inspection was conducted with Jimmy Garcia, Vice President. Observed the facility and inspected hazardous materials storage. The following materials were observed in amounts that meet or exceed the minimum volumes required for disclosure: - EPS- 500 pounds - Vinyl Ester Resin- 55 gallons - Propane- 16 gallons
 REQUIREMENT FOR ELECTRONIC SUBMITTAL OF HMBEP DOCUMENTS: - Business Activities - Owner/Operator Information - Hazardous Materials Inventory - Site Map - Emergency Response Plan - Employee Training Plan The submittal for CERS ID 10566997 dated 6/7/2021 was reviewed during this inspection. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) [Truncated]

Violations:

Site ID: 275086
 Site Name: Cascade Drilling, LP
 Violation Date: 03-15-2017
 Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
 Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
 Violation Notes: Manifests were not available for review during on site inspection. Provide copies of manifest for the last year to this agency within the next 30 days.
 Violation Division: Orange County Environmental Health
 Violation Program: HW
 Violation Source: CERS,

Site ID: 275086
 Site Name: Cascade Drilling, LP
 Violation Date: 04-28-2020
 Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
 Violation Description: Failure to establish and electronically submit an adequate training program in safety procedures in the event of a release or threatened release of a hazardous material.
 Violation Notes: Returned to compliance on 04/29/2020. The Training Plan in CERS is from the previous business (Vironex). Please remove this training plan from CERS. Instead, select 'Provide Elsewhere in CERS' under Document Options and then select 'Emergency Response and Training Plans' Update and resubmit the training plan section CERS within 30 days.
 Violation Division: Orange County Environmental Health
 Violation Program: HMRRP
 Violation Source: CERS,

Site ID: 275086
 Site Name: Cascade Drilling, LP
 Violation Date: 03-15-2017
 Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
 Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

MAP FINDINGS

CASCADE DRILLING, LP, 1225 E MCFADDEN AVE, SANTA ANA, CA 92705 (Continued)

Violation Notes:	Returned to compliance on 03/17/2017. Facility has not yet re-certified HMBEP through the California Environmental Reporting System (CERS). The HMBEP is required to re-certified on an annual basis, the deadline for annual re-certification is March 1st of every year. Re-certify HMBEP through CERS within the next 30 days.
Violation Division:	Orange County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	275086
Site Name:	Cascade Drilling, LP
Violation Date:	04-28-2020
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 04/29/2020. The Hazardous Materials Inventory in CERS is inaccurate/incomplete. Please apply the following changes: (1) New Motor Oil - Remove the State Waste Code - Remove the Annual Waste Amount value (2) Wash Sump Waste - Select all applicable Hazard Categories from the list of 24 hazards - Enter a value for Days On Site (typically 365 days) (3) Argon & Argon/Carbon Dioxide gases - Verify the Maximum Daily Amount for both inventory items. If the Maximum Daily Amount is below 1,000 cubic feet for each, the materials may be removed from the inventory (4) Potassium Bicarbonate - Verify the Maximum Daily Amount. If the Maximum Daily Amount is below 500 pounds, the material may be removed from the inventory. Update and resubmit the inventory via CERS within 30 days.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site Name: OCEANWORKS INC
Violation Date: 05-12-2016
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.

MAP FINDINGS

OCEANWORKS INC, 1009 S HATHAWAY ST, SANTA ANA, CA 92705 (Continued)

Violation Notes:	Returned to compliance on 05/26/2016. The site map must be updated to correctly identify all the required elements and reflect the current layout of the hazardous materials storage on site. Business must update and re-submit the HMBEP to this Agency via Orange County e-Submit Portal https://www.esubmit.ocgov.com/home/ or the California Electronic Reporting System http://cers.calepa.ca.gov/ . A follow-up inspection will be conducted in 30 days.
Violation Division:	Orange County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	414614
Site Name:	OCEANWORKS INC
Violation Date:	10-26-2021
Citation:	HSC 6.5 25143.9 - California Health and Safety Code, Chapter 6.5, Section(s) 25143.9
Violation Description:	Failure to manage a recyclable material pursuant to HSC 6.5 25143.2(b), (c), or (d).
Violation Notes:	Returned to compliance on 03/04/2022. The facility failed to submit the Recyclable Materials Report on CERS by the due date 7/1/2020 for the period 1/1/2018-12/31/2019. Corrective action: Immediately submit the Recyclable Materials Report on CERS for the period of 1/1/2018-12/31/2019. Within 30 days, notify this Agency that the report has been submitted on CERS.
Violation Division:	Orange County Environmental Health
Violation Program:	HWRecycler
Violation Source:	CERS,
Site ID:	414614
Site Name:	OCEANWORKS INC
Violation Date:	10-26-2021
Citation:	HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description:	Failure to report program data electronically.
Violation Notes:	Returned to compliance on 05/08/2023. The facility failed to disclose that it generates hazardous waste and recycles more than 100 kilograms per month of excluded or exempted recyclable materials. Corrective action: Immediately disclose, on the Business Activities Page, that the facility generates hazardous waste, recycles more than 100 kg of excluded recyclable material per month and list the facility's EPA ID number. Within 30 days, notify this Agency that the updated Business Activities section has been submitted on CERS.

Eval Notes:	Walked the facility with Jim Hodges, President. The ownership was confirmed as OCEANWORKS INC and the number of employees as 5. The facility has registered for a permanent EPA ID number, CAD981632052. The facility is a surfboard manufacturer than uses acetone to clean resin off of equipment. The spent acetone is collected and taken to a still to be recycled daily. Jim stated that approximately 4 gallons of spent acetone are recycled per day. The recycled acetone is reused on site in the same process that generated the waste. A copy of this report was sent to jimhodges@mac.com.

Eval Notes:	On site to conduct a routine hazardous waste recycler inspection. Consent to inspect the facility was granted by Jim Hodges. Observed the facility, perimeter, and its recycling process. The facility recycles acetone in accordance with HSC 25143.2(b)(2). Per Mr. Hodges, the facility recycles approximately 5 gallons of acetone every two days. Verified recyclable materials report documentation submitted in the California Environmental Reporting System (CERS). The dumpster was inspected, and no signs of illegal dumping were observed. No violations were noted at the time of inspection. A copy of this report has been emailed to jimhodges@mac.com.

Violation Date:	12-22-2011
Citation:	2014-0057-DWQ - Industrial General Permit
Violation Description:	SW - Failure to Obtain Permit
Violation Notes:	Plastic debris is exposed to storm water. Facility requires permit coverage under Order No. 97-03-DWQ.
Violation Division:	Water Boards
Violation Program:	INDSTW
Violation Source:	SMARTS,

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-03-2012
Violations Found:	No
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	Weather: sunny and warm. Site was enrolled recently; has a SWPPP still in draft form. Contact explained that this site manufactures pipe bends and sweeps from straight pipe from a supplier. Process also involves adding a slip couple using a mandrel lubricated with glycerin. Pipe cutting generates plastic bits observed on ground throughout site; mostly on west side. Discussed why plastic bits were an ecological hazard, importance of housekeeping, and visual and WQ monitoring as a BMP performance indicator.

MAP FINDINGS

SAF T CO SUPPLY INC, 1300 E NORMANDY PL, SANTA ANA, CA 92705 (Continued)

Eval Notes:	On site for routine hazardous materials and business emergency plan inspection. The inspection was conducted with Jennifer Lokers, Executive Associate. Observed the facility and inspected hazardous materials storage. The following materials were observed in amounts that meet or exceed the minimum volumes required for disclosure: - Propane- 160 gallons REQUIREMENT FOR ELECTRONIC SUBMITTAL OF HMBEP DOCUMENTS: - Business Activities - Owner/Operator Information - Hazardous Materials Inventory - Site Map - Emergency Response Plan - Employee Training Plan The submittal for CERS ID 10778377 dated 1/26/2021 was reviewed during this inspection. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change. Hazardous [Truncated]

Eval Notes:	On site to conduct a routine hazardous materials business plan (HMBP) inspection. Consent to inspect the facility was granted by Marcelino Rios. Observed the facility, perimeter, and hazardous materials storage areas. The following materials were present at disclosable quantities: - Propane - PVC cement (Christy's Red Hot Blue Glue) - Solvent cement (Weld-On) Verified HMBP components submitted in the California Environmental Reporting System (CERS). Annual employee hazardous materials training records were reviewed. No HMBP violations were noted at the time of inspection. A copy of this report has been emailed to jennifer.lokers@saftco.com.

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	11-06-2018
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site for routine Hazardous Materials and Business Emergency Plan (HMBEP) inspection. Observed the facility and inspected hazardous materials storage. The following materials were observed in amounts that meet or exceed the minimum volumes required for disclosure: - Propane (approximately 20 tanks, ranging from 5-7 gallons, including the tanks installed on multiple forklifts) Facilities storing hazardous materials over the reportable thresholds of 55 gallons for a liquid, 500 pounds for a solid, or 200 cubic feet for a compressed gas are required to complete a Hazardous Materials Business Emergency Plan. This facility has an adjacent warehouse for the storage of other hazardous materials (1236 Normandy Pl, Santa Ana, CA 92705). REQUIREMENT FOR ELECTRONIC SUBMITTAL OF HMBEP DOCUMENTS: This report serves as notice that the facility must submit the following documents electronically within 30 days of this report: - Business Activities - Owner/Operator [Truncated]

Site Name: SCE Central Orange County (Santa Ana) Service Center
 Violation Date: 02-17-2021
 Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
 Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
 Violation Notes: Returned to compliance on 03/09/2021. The facility was observed to be storing propane, parts washer solution, and FR3 in reportable quantities and failed to disclose them on the hazardous materials inventory. Corrective action: Within 30 days, add propane, parts washer solution, and FR3 to the hazardous materials inventory and resubmit on CERS. Notify this Agency when the violation has been corrected.

 Eval Notes: On site for non-RCRA large quantity generator (LQG) and remote waste consolidation site inspections. Also present was Ashley Acevedo, OCHCA. Consent to inspect the facility was granted by Donald Hurdle. Observed the facility and its hazardous waste storage areas. The facility generates hazardous waste from automotive maintenance, electrical equipment maintenance, and electrical equipment spill clean-up. Hazardous waste containers were observed to be properly labeled and stored closed. No hazardous waste was observed in facility trash bins, dumpsters, or roll-off bins. Hazardous waste tank and container inspection logs were available for review on this date. The hazardous waste tank assessment for the waste oil tank was certified by a PE on 01/07/2024. Employees are reported to be trained. Documented employee training was reviewed on this date. Emergency response information was available on site. Hazardous waste manifests were available for review. The facility is a remote waste

Eval Notes:	Received email to Billing Department from my supervisor regarding this facility. Regarding the billing issue for HazMat for this facility, my supervisor Christine Lane sent this email to the representative from Southern Calif. Edison on 9/18/2013: Good afternoon Maria, I wanted to let you know that we were able to move the haz mat program from the 1327 location to the 1241 location, and inactivate the 1-4 chemicals from the 1241 location. The fees for the 1327 location have been reversed, but you will receive a revised invoice for the 21+ chemicals at the 1241 location. Please let me know if you have any questions regarding these changes, or if the new invoice has errors. Thank you, Christine Christine Lane, REHS Supervising Hazardous Waste Specialist OC Environmental Health 714-433-6210 Office 714-640-9693 Cell 714-754-1768 Fax Visit our website: www.occupainfo.com From: Maria.Zambrano-Lozano@sce.com [mailto:Maria.Zambrano-Lozano@sce.com] Sent: [Truncated]

Eval Notes:	INSPECTOR COMMENTS: On site for a routine hazardous waste inspection. Consent to enter and conduct inspection activities was provided by David Barr, Environmental Specialist and Blake Matjas, Yard Manager. Business ownership information was verified. The current number of employees is 576. Walked throughout the facility. Observed hazardous waste storage areas. All containers were observed to be closed while not in use and properly labeled. Manifests were available and reviewed. Employees are reported to be trained. Emergency plan is posted in multiple locations throughout the facility. A perimeter walk was conducted and the dumpster enclosure was observed. No signs of illegal dumping were noted.

Eval Notes:	On site for a routine Above Ground Storage Tank (AST) > 10,000 gallons inspection. Consent to conduct the inspection was given by Blake Matjer, Yard Manager. The Spill Prevention Control and Countermeasure (SPCC) plan was reviewed. SPCC plan was last certified 11-1-12. Inspections conducted monthly and documented. Tank facility statement submitted into the California Electronic Reporting System (CERS). Spill kits observed near the ASTs. Training of employees on SPCC procedures conducted every six months and documented. Access to the ASTs is controlled by site security and gates. No AST/SPCC violations observed this date. Copy of this report emailed to David Barr, Environmental Specialist.

Eval Notes:	Reviewed the submittal dated 2/26/2021 for the following sections: Facility Information, Hazardous Materials Inventory, and Emergency Response and Training Plans. All sections were accepted. The hazardous materials inventory was observed to include the parts washer solution noted on the 2/16/2021 inspection report. The SDS for the FR3 was provided and it indicated that the material is not a hazardous material. The propane noted on the inspection report was used for space heating of employee areas and was below the 500 gallon exception threshold. Violation I169 was observed to be corrected, no further corrective action required. A copy of this report was sent to donald.hurdle@sce.com.

Site ID: 412951
 Site Name: JS AUTOMOTIVE
 Violation Date: 11-08-2018
 Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
 Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
 Violation Notes: Returned to compliance on 02/21/2019. Observed the facility and inspected hazardous material storage. The following material was observed in amounts that meet or exceed the minimum volumes required for disclosure and must be added electronically in CERS: - Waste antifreeze (one 55-gallon drum) The business failed to update business plan within 30 days when one of the following occurs: a 100 percent or more increase in the quantity of a previously disclosed material; any handling of a previously undisclosed hazardous material; a change of business address, business ownership, or business name; or a substantial change in the handler's operations that requires modification to any portion of the business plan. Update all submittal elements effected by the change(s) and electronically submit the update within 30 days.

MAP FINDINGS

JS AUTOMOTIVE, 1002 S HATHAWAY ST STE D, SANTA ANA, CA 92705 (Continued)

Eval Notes:	The purpose of this off site reinspection is to follow up on the facility's outstanding violations. The business has submitted a complete Hazardous Materials Business Emergency Plan (HMBEP) via the California Environmental Reporting System (CERS). The business has also provided employee training records. The CERS submittal has been reviewed and all sections have been ACCEPTED. All outstanding violations (I463, I239, I336) have been corrected. Please note: All employees are required to be trained annually; new employees are required to be trained within 6 months. Please maintain training records on site for at least three (3) years. A copy of this inspection report will be sent to: javxmendoza@gmail.com

Eval Notes:	Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During the months of August and December of 2013, the OC CUPA sent out letters to regulated businesses requesting them to electronically submit their HMD/BEP forms. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a username and password and submit your HMD/BEP forms within the next 30 days. Businesses may also submit forms via the California Environmental Reporting System. Please verify that all owner information that is prepopulated on the E-Submit Portal is still accurate. [Truncated]

MAP FINDINGS

PACIFIC AUTO SERVICE, 1002 S HATHAWAY STE B, SANTA ANA, CA 92705 (Continued)

Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 03/16/2022. Employee training records were not available for review at the time of the inspection. All employees are required to be trained annually; new employees are required to be trained within 6 months. Submit training records to this agency within 30 days with the following information documented: - Topic of training - Date of training - Employee name - Employee signature
Violation Division:	Orange County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	419416
Site Name:	PACIFIC AUTO SERVICE
Violation Date:	10-29-2021
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 06/09/2023. The facility was observed to store hazardous materials at or above reporting threshold quantities and failed to submit a Hazardous Materials Business Emergency Plan on the California Environmental Reporting System. Corrective action: Immediately submit the Hazardous Materials Business Emergency Plan on the California Environmental Reporting System. Within 30 days, notify this Agency that the plan has been submitted electronically.
Violation Division:	Orange County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	419416
Site Name:	PACIFIC AUTO SERVICE
Violation Date:	06-21-2023
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Waste oil has not been hauled within 180 days (last documented pickup was 07/19/2022). Waste paper filters have not been hauled within 180 days (observed accumulation start date on container of 01/15/2020).

Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	PACIFIC AUTO SERVICE, 1002 S HATHAWAY ST STE B, SANTA ANA CA 92705 A routine hazardous waste inspection was conducted. Ownership reportedly changed several years ago and the DBA changed from Pacifica Auto to Pacific Auto Service. Jesus Jaimes granted me permission to inspect and assisted with the inspection. The service bays, perimeter of facility and trash dumpster were inspected. No hazardous waste in dumpster. Drums of hazardous waste were stored closed and labeled with required information. Manifests for hazardous waste disposal were on site. A hazardous waste emergency response plan was posted on the wall of the office.
Eval Division:	Orange County Environmental Health
Eval Program:	HW
Eval Source:	CERS,
Eval General Type:	Other/Unknown
Eval Date:	09-02-2014
Violations Found:	No
Eval Type:	Other, not routine, done by local agency
Eval Notes:	The business owner and his son from this business visited our front counter and they had received two bills from us, one for Pacific Auto with fees for HW, HazMat and CUPA and one for Pacific Auto Service with fees for HazMat and CUPA. I made a copy of our agency's fee schedule and also made copies of his bills and told them that I will visit their business today to determine whether or not they have hazardous materials and to straighten out the billing issue. I then ran report 7800 for all programs at this FA # and reviewed reports, then printed RUR form.

Eval Date:	01-10-2020

MAP FINDINGS

A&J'S AUTO GARAGE, 1002 S HATHAWAY ST UNIT C, SANTA ANA, CA 92705 (Continued)

Violations Found: No

Eval Type: Routine done by local agency

Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Observed the facility and inspected hazardous materials storage. The following materials were observed in amounts that meet or exceed the minimum volumes required for disclosure: - Used oil (4 x 55-gallon containers); approximately 95 gallons on site during today's inspection. The facility is responsible for identifying all hazardous materials, and to include hazardous wastes, which are above disclosure thresholds (55 gallons of a liquid, 500 pounds of a solid, 200 cubic feet of a compressed gas). If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change. REQUIREMENT FOR ELECTRONIC SUBMITTAL OF HMBEP DOCUMENTS: This report serves as notice that the facility must submit the following documents electronically within 30 days of this report: (1) Business Activities (2) Business [Truncated]

Eval General Type: Other/Unknown

Eval Date: 08-07-2023

Violations Found: Yes

Eval Type: Other, not routine, done by local agency

Eval Notes: According to the CERS database, your business remains out of compliance with the annual certification requirement and a violation is being cited. Businesses are required to annually review and certify that their information in the California Electronic Reporting System (CERS) is complete, accurate and in compliance by March 1st. Your business was notified via email on 05/04/23 that your facility was out of compliance with this requirement. Please visit <https://cers.calepa.ca.gov/> to access CERS and submit your completed HMBP forms. Failure to submit HMBEP forms is a violation of the California Health & Safety Code and California Code of Regulations. Progressive enforcement will be taken by this agency if a submittal/certification has not been completed within 30 days of this report.

Eval Division: Orange County Environmental Health

Eval Notes:	A routine inspection was conducted. Don Boydston, owner, granted me permission to inspect and accompanied me during the inspection. Mr. Boydston reported no changes in business name, owner, organization, number of employees, or hazardous waste generating processes since the last inspection. The e-mail address in our Agency's database was confirmed. The shop area, waste oil tank storage outside, perimeter of facility and trash container were inspected. No hazardous waste observed in trash container. The tank of waste oil had a hazardous waste label on it that was not legible. The asphalt area around the tank has staining from past oil spills. Continue to take measures to ensure oil, when poured into the tank, does not spill onto ground outside the tank. Manifests for past hazardous waste disposals were on site, but were not immediately available. There has been only one disposal of hazardous waste from the past 12 months, and this manifest (for disposal of 50 gallons [Truncated])

Eval Notes:	I was on site to conduct a routine hazardous waste inspection. The business owner, Don Boydston, granted me permission to inspect and accompanied me on the inspection. The shop, outside perimeter of property, and trash dumpster enclosure were inspected. No hazardous waste observed in dumpster. A tank of waste motor oil was observed stored in the shop, and was closed and labeled with required hazardous waste information. Manifests for disposal of hazardous waste were available for review, and in the last 12 months there was one disposal of 50 gallons of used oil. A hazardous waste emergency response plan was posted on the wall of the shop, and absorbent material for spill cleanup is maintained on site.

EDR Historical Topo Map Report

10/27/25

Site Name:

Orange County Fleet Facility
1400 South Grand Avenue
Santa Ana, CA 92705
EDR Inquiry # 8153078.4

Client Name:

Leighton Consulting
2600 Michelson Drive, Suite 400
Irvine, CA 92612
Contact: Brynn Mcculloch

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Leighton Consulting were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

P.O.#	036.0000033083	Latitude:	33.730528 33° 43' 50" North

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Leighton Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

APPENDIX F

Important Information about This Geoenvironmental Report

Geoenvironmental studies are commissioned to gain information about environmental conditions on and beneath the surface of a site. The more comprehensive the study, the more reliable the assessment is likely to be. But remember: Any such assessment is to a greater or lesser extent based on professional opinions about conditions that cannot be seen or tested. Accordingly, no matter how many data are developed, risks created by unanticipated conditions will always remain. *Have realistic expectations.* Work with your geoenvironmental consultant to manage known and unknown risks. Part of that process should already have been accomplished, through the risk allocation provisions you and your geoenvironmental professional discussed and included in your contract's general terms and conditions. This document is intended to explain some of the concepts that may be included in your agreement, and to pass along information and suggestions to help you manage your risk.

Beware of Change; Keep Your Geoenvironmental Professional Advised

The design of a geoenvironmental study considers a variety of factors that are subject to change. Changes can undermine the applicability of a report's findings, conclusions, and recommendations. *Advise your geoenvironmental professional about any changes you become aware of.* Geoenvironmental professionals cannot accept responsibility or liability for problems that occur because a report fails to consider conditions that did not exist when the study was designed. Ask your geoenvironmental professional about the types of changes you should be particularly alert to. Some of the most common include:

- modification of the proposed development or ownership group,
- sale or other property transfer,
- replacement of or additions to the financing entity,

- amendment of existing regulations or introduction of new ones, or
- changes in the use or condition of adjacent property.

Should you become aware of any change, *do not rely on a geoenvironmental report.* Advise your geoenvironmental professional immediately; follow the professional's advice.

Recognize the Impact of Time

A geoenvironmental professional's findings, recommendations, and conclusions cannot remain valid indefinitely. The more time that passes, the more likely it is that important latent changes will occur. *Do not rely on a geoenvironmental report if too much time has elapsed since it was completed.* Ask your environmental professional to define "too much time." In the case of Phase I Environmental Site Assessments (ESAs), for example, more than 180 days after submission is generally considered "too much."

Prepare To Deal with Unanticipated Conditions

The findings, recommendations, and conclusions of a Phase I ESA report typically are based on a review of historical information, interviews, a site "walkover," and other forms of noninvasive research. When site subsurface conditions are not sampled in any way, the risk of unanticipated conditions is higher than it would otherwise be.

While borings, installation of monitoring wells, and similar invasive test methods can help reduce the risk of unanticipated conditions, *do not overvalue the effectiveness of testing.* Testing provides information about actual conditions only at the precise locations where samples are taken, and only when they are taken. Your geoenvironmental

professional has applied that specific information to develop a general opinion about environmental conditions. *Actual conditions in areas not sampled may differ (sometimes sharply) from those predicted in a report.* For example, a site may contain an unregistered underground storage tank that shows no surface trace of its existence. *Even conditions in areas that were tested can change*, sometimes suddenly, due to any number of events, not the least of which include occurrences at adjacent sites. Recognize, too, that *even some conditions in tested areas may go undiscovered*, because the tests or analytical methods used were designed to detect only those conditions assumed to exist.

Manage your risks by retaining your geoenvironmental professional to work with you as the project proceeds. Establish a contingency fund or other means to enable your geoenvironmental professional to respond rapidly, in order to limit the impact of unforeseen conditions. And to help prevent any misunderstanding, identify those empowered to authorize changes and the administrative procedures that should be followed.

Do Not Permit Any Other Party To Rely on the Report

Geoenvironmental professionals design their studies and prepare their reports to meet the specific needs of the clients who retain them, in light of the risk management methods that the client and geoenvironmental professional agree to, and the statutory, regulatory, or other requirements that apply. The study designed for a developer may differ sharply from one designed for a lender, insurer, public agency...or even another developer. *Unless the report specifically states otherwise, it was developed for you and only you.* Do not unilaterally permit any other party to rely on it. The report and the study underlying it may not be adequate for another party's needs, and you could be held liable for shortcomings your geoenvironmental professional was powerless to prevent or anticipate. Inform your geoenvironmental professional when you know or expect that someone else—a third-party—will want to use or rely on the report. *Do not permit third-party use or reliance until you first confer with the geoenvironmental professional who prepared the report.* Additional testing, analysis, or study may be required and, in any event, appropriate terms and conditions should be agreed to so both you and your geoenvironmental professional are protected from third-party risks. *Any party who relies on a geoenvironmental report without the express written permission of the professional who prepared it and the client for whom it was prepared may be solely liable for any problems that arise.*

Avoid Misinterpretation of the Report

Design professionals and other parties may want to rely on the report in developing plans and specifications. They need to be advised, in writing, that their needs may not have been considered when the study's scope was developed, and, even if their needs were considered, they might misinterpret geoenvironmental findings, conclusions, and recommendations. *Commission your geoenvironmental professional to explain pertinent elements of the report to others who are permitted to rely on it, and to review any plans, specifications or other instruments of professional service that incorporate any of the report's findings, conclusions, or recommendations.* Your geoenvironmental professional has the best understanding of the issues involved, including the fundamental assumptions that underpinned the study's scope.

Give Contractors Access to the Report

Reduce the risk of delays, claims, and disputes by giving contractors access to the full report, *providing that it is accompanied by a letter of transmittal that can protect you* by making it unquestionably clear that: 1) the study was not conducted and the report was not prepared for purposes of bid development, and 2) the findings, conclusions, and recommendations included in the report are based on a variety of opinions, inferences, and assumptions and are subject to interpretation. Use the letter to also advise contractors to consult with your geoenvironmental professional to obtain clarifications, interpretations, and guidance (a fee may be required for this service), and that—in any event—they should conduct additional studies to obtain the specific type and extent of information each prefers for preparing a bid or cost estimate. Providing access to the full report, with the appropriate caveats, helps prevent formation of adversarial attitudes and claims of concealed or differing conditions. If a contractor elects to ignore the warnings and advice in the letter of transmittal, it would do so at its own risk. Your geoenvironmental professional should be able to help you prepare an effective letter.

Do Not Separate Documentation from the Report

Geoenvironmental reports often include supplemental documentation, such as maps and copies of regulatory files, permits, registrations, citations, and correspondence with regulatory agencies. If subsurface explorations were performed, the report may contain final boring logs and copies of laboratory data. If remediation activities occurred on site, the report may include: copies of daily field reports; waste manifests; and information about the disturbance of subsurface materials, the type and thickness of any fill placed on site, and fill placement practices, among other types of documentation. *Do not separate supplemental documentation from the report. Do not, and do not permit any other party to redraw or modify any of the supplemental documentation for incorporation into other professionals' instruments of service.*

Understand the Role of Standards

Unless they are incorporated into statutes or regulations, standard practices and standard guides developed by the American Society for Testing and Materials (ASTM) and other recognized standards-developing organizations (SDOs) are little more than aspirational methods agreed to by a consensus of a committee. The committees that develop standards may not comprise those best-qualified to establish methods and, no matter what, no standard method can possibly consider the infinite client- and project-specific variables that fly in the face of the theoretical "standard conditions" to which standard practices and standard guides apply. In fact, these variables can be so pronounced that geoenvironmental professionals who comply with every directive of an ASTM or other standard procedure could run afoul of local custom and practice, thus violating the standard of care. Accordingly, when geoenvironmental professionals indicate in their reports that they have performed a service "in general compliance" with one standard or another, it means they have applied professional judgement in creating and implementing a scope of service designed for the specific client and project involved, and which follows some of the general precepts laid out in the referenced standard. To the extent that a report indicates "general compliance" with a standard, you may wish to speak with your geoenvironmental professional to learn more about what was and was not done. *Do not assume a given standard was followed to the letter.* Research indicates that that seldom is the case.

Realize That Recommendations May Not Be Final

The technical recommendations included in a geoenvironmental report are based on assumptions about actual conditions, and so are preliminary or tentative. Final recommendations can be prepared only by observing actual conditions as they are exposed. For that reason, you should retain the geoenvironmental professional of record to observe construction and/or remediation activities on site, to permit rapid response to unanticipated conditions. *The geoenvironmental professional who prepared the report cannot assume responsibility or liability for the report's recommendations if that professional is not retained to observe relevant site operations.*

Understand That Geotechnical Issues Have Not Been Addressed

Unless geotechnical engineering was specifically included in the scope of professional service, a report is not likely to relate any findings, conclusions, or recommendations about the suitability of subsurface materials for construction purposes, especially when site remediation has been accomplished through the removal, replacement, encapsulation, or chemical treatment of on-site soils. The equipment, techniques, and testing used by geotechnical engineers differ markedly from those used by geoenvironmental professionals; their education, training, and experience are also significantly different. If you plan to build on the subject site, but have not yet had a geotechnical engineering study conducted, your geoenvironmental professional should be able to provide guidance about the next steps you should take. The same firm may provide the services you need.

Read Responsibility Provisions Closely

Geoenvironmental studies cannot be exact; they are based on professional judgement and opinion. Nonetheless, some clients, contractors, and others assume geoenvironmental reports are or certainly should be unerringly precise. Such assumptions have created unrealistic expectations that have led to wholly unwarranted claims and disputes. To help prevent such problems, geoenvironmental professionals have developed a number of report provisions and contract terms that explain who is responsible for what, and how risks are to be allocated. Some people mistake these for “exculpatory clauses,” that is, provisions whose purpose is to transfer one party’s rightful responsibilities and liabilities to someone else. Read the responsibility provisions included in a report and in the contract you and your geoenvironmental professional agreed to. *Responsibility provisions are not “boilerplate.”* They are important.

Rely on Your Geoenvironmental Professional for Additional Assistance

Membership in the Geoprofessional Business Association exposes geoenvironmental professionals to a wide array of risk management techniques that can be of genuine benefit for everyone involved with a geoenvironmental project. Confer with your GBA-member geoenvironmental professional for more information.

Attention: Lisa Louie, Senior Project Manager

Subject: Hydrology and Hydraulics Report on Grand Ave Fleet Garage
1300 to 1400 S. Grand Avenue, Santa Ana, California

Dear Ms. Louie,

Haley & Aldrich, Inc. (Haley & Aldrich) is pleased to submit this preliminary draft Hydrology and Hydraulics Report for the proposed Orange County Fleet Facility located at 1300-1400 S. Grand Avenue in Santa Ana, California.

Please note that this report and the calculations herein are based on preliminary assumptions and conceptual site layouts. They are intended to provide an initial framework for stormwater compliance and design considerations. A future, updated version will be prepared once detailed survey data, finalized building footprints, and additional project information become available.

The analysis addresses pre- and post-development hydrologic conditions, identifies potential increases in runoff, and recommends mitigation measures such as underground detention and water quality best management practices (BMPs). Hydraulic design considerations for storm drain infrastructure are also summarized to maintain system performance under design storm conditions.

We appreciate the opportunity to support this project and look forward to collaborating on the next steps. Please contact us with any questions or comments.

To Be Determined

Executive Summary

This preliminary draft Hydrology and Hydraulics Report evaluates stormwater management requirements for the proposed Orange County Fleet Facility located at 1300 to 1400 S. Grand Avenue in Santa Ana, California (Site). The project consolidates fleet operations on two parcels totaling approximately 11.3 acres, with improvements including two primary buildings, expanded access roads, surface parking, and a solar canopy.

The Site is currently developed with paved surfaces and drains via sheet flow to the municipal storm drain system. Post-development conditions will increase impervious coverage and therefore increase runoff potential. Hydrologic analysis using the Modified Rational Method indicates that unmitigated 100-year peak flows could increase from approximately 23 to 48 cubic feet per second (cfs).

Important Note: All calculations and assumptions presented in this report are preliminary and based on conceptual plans. They are subject to refinement during detailed design once survey data and finalized building footprints are available.

To comply with Orange County standards (Orange County Environmental Management Agency, 1986) and the Drainage Area Master Plan (DAMP), mitigation measures such as underground detention and water quality best management practices (BMPs) will be incorporated so that post-development discharge does not exceed existing conditions. Hydraulic design will utilize Manning's equation and HY-8 or stormwater design software to size storm drain infrastructure capable of conveying mitigated flows without surcharge, and maintaining hydraulic grade lines below finished grade. Final sizing and configuration will be refined during detailed design based on survey data and finalized building footprints.

This report provides an initial framework for stormwater compliance and outlines next steps for detailed design, including detention system sizing, BMP selection, and connection to the municipal storm drain system.

1. Introduction

1.1 PROJECT DESCRIPTION AND PURPOSE

This preliminary draft hydrology and hydraulics report provides an initial evaluation of stormwater management requirements for the proposed Orange County Fleet Facility located at 1300 - 1400 S. Grand Avenue in Santa Ana, California (Site).

The proposed development encompasses two contiguous parcels totaling approximately 11.3 acres in Santa Ana, California. Orange County intends to consolidate its fleet operations at this location to improve efficiency, reduce redundancy, and position services adjacent to the Civic Center. The project footprint will occupy roughly 200,000 square feet (4.59 acres) and include two primary structures:

- **Fleet Maintenance and Administration Building:** approximately 45,706 square feet, housing vehicle service bays, administrative offices, technician workspaces, and storage areas.
- **Operations Support Building:** approximately 20,000 square feet, designed to accommodate future facility operations.

Additional Site improvements include a solar canopy over designated parking areas, expanded surface parking, an extended access road (approximately 50,000 square feet), and a disposal lot of roughly 10,000 square feet. Two points of ingress and egress will provide efficient circulation for fleet vehicles and staff.

Important Note: This report is based on conceptual site layouts and preliminary assumptions. Calculations and design recommendations herein are intended for planning purposes only and will be refined in a future version once detailed survey data, finalized building footprints, and additional project information become available.

The purpose of this report is to outline initial hydrologic and hydraulic considerations and provide a framework for a stormwater management system that complies with Orange County standards (Orange County Environmental Management Agency, 1986). Specifically, the analysis demonstrates that preliminary estimates of post-development peak flows relative to pre-development conditions at the point of connection to the municipal storm drain system along Grand Avenue, consistent with the Orange County Drainage Area Master Plan (DAMP). The report also identifies water quality requirements and mitigation measures necessary to comply with the California Environmental Quality Act (CEQA) and local regulatory criteria.

2. Project Site Conditions

2.1 EXISTING SITE (PRE-DEVELOPMENT) CONDITIONS

The Site consists of two parcels totaling approximately 11.3 acres. The area is largely developed with paved surfaces, storage areas, and minor landscaping. Topography is generally level with slight grading typical of urban parcels, sloping from north to south. Stormwater runoff sheet flows toward the centerline concrete gutter within the Paved Apron and Alley Layout (PAAL) and is collected into municipal storm drains. No natural drainage channels are present.

Note: Existing condition descriptions are based on available mapping and conceptual information. These will be confirmed during detailed survey and geotechnical investigations. See Appendix A for Existing Conditions Preliminary Map and Plan of Operations.

2.2 PROPOSED SITE (POST-DEVELOPMENT) CONDITIONS

The proposed development will convert the parcels into a centralized fleet operations facility with two primary buildings, expanded access roads, and associated infrastructure. Impervious coverage will increase significantly, resulting in higher runoff potential.

To address this, the conceptual design will incorporate the following:

- an internal storm drain network;
- underground detention facilities; and
- water quality best management practices (BMPs; e.g., modular wetlands or bioretention)

These measures are preliminary recommendations intended to support compliance with the Orange County Hydrology Manual (Orange County Environmental Management Agency, 1986). Final sizing and configuration will be refined during detailed design once survey data and finalized building footprints are available. See Appendix A for Proposed Conditions Preliminary Map and Plan of Operations.

2.3 PRECIPITATION

The Site is located in Santa Ana, California, within a semi-arid Mediterranean climate zone characterized by mild, wet winters and hot, dry summers. Average annual rainfall ranges from approximately 13 to 15 inches, with most precipitation occurring between November and March. Storm events are typically short-lived but can produce high-intensity rainfall during winter frontal systems and occasional atmospheric river conditions.

Hydrologic criteria for this project follow Orange County standards (Orange County Environmental Management Agency, 1986), which establish design storms with 24-hour durations for return periods of 2, 10, and 100 years to provide adequate protection of critical infrastructure.

Important Note: Rainfall intensities and design storm assumptions are based on National Oceanic and Atmospheric Administration (NOAA Atlas 14 data and Orange County criteria). These values are preliminary and subject to confirmation during detailed design (see rainfall data in Appendix B).

Table I. Santa Ana Rain Fall Intensities

Return Period	24-Hour Rainfall (inches)
2-Year	2.23
10-Year	3.52
25-Year	4.36
100-Year	5.72

2.4 WATERSHED DESCRIPTION

The Site is located within the Newport Bay watershed, which drains to Upper Newport Bay and ultimately the Pacific Ocean. Regional topography slopes gently toward the southwest.
(Preliminary characterization; subject to confirmation during detailed design.)

2.5 SOIL TYPES

The Natural Resources Conservation Service (NRCS) has classified Site soils as Hydrologic Soil Groups B and C, indicating moderate to slow infiltration rates (United States Department of Agriculture [USDA], 2025). See Appendix C for soil type classifications.
(Preliminary; field verification will occur during geotechnical investigations.)

2.6 LAND USE

The Site is zoned as Light Industrial according to the City of Santa Ana zoning map. It has a General Plan land use designation of Industrial and Institutional. Surrounding land uses Light Industrial, Commercial, and Residential Zones.
(Information based on current zoning maps; subject to confirmation.)

2.7 GROUNDWATER

Groundwater conditions are currently unknown and will be confirmed during geotechnical investigations.
(Assumed for preliminary analysis; no groundwater modeling performed at this stage.)

2.8 THE FEDERAL EMERGENCY MANAGEMENT AGENCY MAPPING

The Site is covered by Map Number 06069C0276J of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) for Orange County, California. Santa Ana, community number 060232. The portion of the Site shown on the map is not within a FEMA-mapped special flood hazard area. The effective FEMA map is dated December 3, 2009 and is provided in the Appendix D.
(Preliminary reference; subject to verification during permitting.)

3. Hydrologic Analysis

3.1 METHODOLOGY

Hydrologic design for this project follows the criteria outlined in the Orange County Hydrology Manual (Orange County Environmental Management Agency, 1986). Runoff estimates were developed using the Modified Rational Method, which is the standard approach for small, urbanized sites in Orange County.

Important Note: All hydrologic calculations presented herein are preliminary and based on conceptual site layouts and assumed drainage patterns. These assumptions will be refined during detailed design once survey data, finalized building footprints, and geotechnical information are available.

Runoff coefficients were selected in accordance with Section D.5 of the Orange County Hydrology Manual, and precipitation intensities were derived from Figure B-3 of the manual. For this preliminary analysis, the Site was delineated as two drainage management areas (DA), pervious and impervious, assumed. The DAs were modeled by adding each area to the mainline at the mainline time of concentration rather than modeling all connections as confluences. This approach is conservative and produces slightly higher peak flow estimates. See Appendix E for Rational Method Calculation Sheets. Supporting calculations are provided in the Appendix E.

Table II. Rational Method Variables

Drainage Area	Area (ac)	C	Tc (min.)
DA-1	0.903	0.13	5
DA-2	4.81	0.90	5

The Site does not fall within a designated hydromodification zone; therefore, analysis of the two-year storm event was not required. Preliminary results indicate that underground detention may be necessary so that post-development discharge does not exceed existing conditions at the point of connection to the public storm drain system. Final determination of detention requirements and detailed design of the storm drain connection will be completed upon receipt of detailed Site survey data and finalized building footprints.

3.2 HYDROLOGIC RESULTS

Preliminary results indicate that unmitigated post-development peak flows could exceed existing conditions, necessitating detention and BMPs to maintain compliance.

Table III. Peak Flow Discharge Analysis

Condition	Area (ac)	100-Year Peak Flow (cfs)
Existing	11.3	22.5
Proposed (unmitigated)	11.3	48.2
Proposed (mitigated)	11.3	<=22.5

Notes and abbreviations:

<=: greater than or equal to

cfs: cubic feet per second

Disclaimer: These values are based on preliminary assumptions and conceptual design. Final sizing and mitigation requirements will be determined during detailed design.

4. Hydraulic Analysis

4.1 METHODOLOGY

Hydraulic calculations for PAAL capacity sizing have been performed using the Manning's equation. HY-8 will be used to verify preliminary pipe capacities and slopes. Storm drain software will be implemented to tie the stormdrain system in to the public system.

Note: All hydraulic design elements described herein are conceptual and intended for planning purposes only. Final pipe sizes, slopes, and material specifications will be determined during detailed design based on survey data and finalized grading plans.

4.2 RESULTS AND CONCLUSIONS

The proposed drainage system will be designed to convey the mitigated 100-year design flow without surcharge and maintain hydraulic grade lines below finished surface elevations. Pipe sizing will account for material type, roughness coefficient, and minimum slope requirements to comply with Orange County standards. A summary of preliminary pipe sizing criteria is provided below:

Pipe Size	Material	Manning 'n'	Slope (%)	Capacity (cfs)
TBD	HDPE/RCP	0.011 to 0.013	≥ 0.50	Varies

Disclaimer: Pipe sizes and capacities shown above are placeholders. Detailed hydraulic modeling will be completed during final design.

Global Disclaimer for Entire Report

This report is a preliminary draft prepared for planning purposes only. All calculations, assumptions, and design recommendations are based on conceptual site layouts and limited available data. Final hydrologic and hydraulic design will be completed upon receipt of detailed survey information, finalized building footprints, and geotechnical data. This document is not intended for construction or permitting.

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).
Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.
Please refer to NOAA Atlas 14 document for more information.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Orange County and Part of Riverside County, California
Survey Area Data: Version 19, Sep 8, 2025

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2024—Jul 1, 2024

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
140	Chino silty clay loam, drained	C	5.6	49.3%
166	Mocho loam, 0 to 2 percent slopes, warm MAAT, MLRA 19	B	5.7	50.7%
Totals for Area of Interest			11.3	100.0%

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

APPENDIX D
FEMA FIRM Map

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **Floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0 North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations tables in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations tables should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) Zone 11. The horizontal datum was NAD 83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at <http://www.ngs.noaa.gov> or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, NNGS12
National Geodetic Survey
SSM-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at <http://www.ngs.noaa.gov>.

Base map information shown on this FIRM was derived from the National Agriculture Imagery Program, dated 2005.

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels, community map repository addresses, and a listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-800-358-9618 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at <http://msc.fema.gov>.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA website at <http://www.fema.gov>.

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AD, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- ZONE A** No Base Flood Elevations determined.
- ZONE AE** Base Flood Elevations determined.
- ZONE AD** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AR** Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently identified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- ZONE A99** Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; No Base Flood Elevations determined.
- ZONE V** Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- ZONE VE** Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X Areas determined to be outside the 0.2% annual chance floodplain.

ZONE D Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities
- Base Flood Elevation line and value; elevation in feet*
- Base Flood Elevation value where uniform within zone; elevation in feet*

* Referenced to the North American Vertical Datum of 1988

Attention: Lisa Louie, Senior Project Manager

Subject: Water Quality Management Plan
Grand Avenue Fleet Garage
1300 to 1400 S. Grand Avenue
Santa Ana, California 92705

Dear Ms. Louie,

Haley & Aldrich, Inc. (Haley & Aldrich) is pleased to submit this preliminary draft Water Quality Management Plan (WQMP) for the proposed Orange County Fleet Facility located at 1300-1400 S. Grand Avenue in Santa Ana, California.

This preliminary WQMP has been prepared based on conceptual project information and preliminary assumptions documented in the Preliminary Draft Hydrology and Hydraulic Report, which identifies potential changes in runoff conditions and considers preliminary mitigation concepts, including underground detention and water quality best management practices. Together, the preliminary draft WQMP and the Preliminary Draft Hydrology and Hydraulic Report are intended to provide an initial framework for water quality management, regulatory compliance considerations, and stormwater design concepts to support ongoing project development.

A future updated WQMP will be prepared, concurrently with an updated version of the Hydrology and Hydraulic Report, once detailed survey data, the finalized site layout, building footprints, and additional project information become available.

We appreciate the opportunity to support this project and look forward to continued coordination as the project advances. Please feel free to contact us with any questions or comments.

Sincerely yours,
HALEY & ALDRICH, INC.

This preliminary draft Water Quality Management Plan (WQMP) has been prepared for Chambers Group Inc. by Haley & Aldrich, Inc. and is intended to comply with the requirements of the County of Orange National Pollutant Discharge Elimination System (NPDES) Stormwater Program requiring the preparation of the plan.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan, including the ongoing operation and maintenance of all best management practices (BMPs), and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the Site consistent with the current Orange County Drainage Area Management Plan (DAMP) and the intent of the non-point source NPDES Permit for Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the incorporated Cities of Orange County within the Santa Ana Region. Once the undersigned transfers its interest in the property, its successors-in-interest shall bear the aforementioned responsibility to implement and amend the WQMP. An appropriate number of approved and signed copies of this document shall be available on the subject Site in perpetuity.

Section I Permit(s) and Water Quality Conditions of Approval or Issuance

Provide discretionary or grading/building permit information and water quality conditions of approval, or permit issuance, applied to the project. If conditions are unknown, please request applicable conditions from staff. Refer to Section 2.1 in the Technical Guidance Document (TGD) available on the Orange County (OC) Planning website (ocplanning.net).

Project Information	
Permit/Application No. (If applicable)	Grading or Building Permit No. (If applicable)
Address of Project Site (or Tract Map and Lot Number if no address) and APN	1300-1400 South Grand Avenue, Santa Ana, California (the "Site") Assessor Parcel Number (APN) 014-161-07 and 014-451-01
Water Quality Conditions of Approval or Issuance	
Water Quality Conditions of Approval or Issuance applied to this project. (Please list verbatim.)	Prior to the issuance of any grading or building permits, the applicant shall submit to Orange County (the County), for review and approval, a Project Water Quality Management Plan (WQMP). The project is subject to the water quality conditions set forth per City of Santa Ana Municipal Code (Part 1, Chapter 18, Article IV, Section 18-156), which requires that all new development and significant redevelopment projects comply with the requirements of the Orange County Drainage Area Management Plan (DAMP).
Conceptual WQMP	
Was a Conceptual Water Quality Management Plan previously approved for this project?	No
Watershed-Based Plan Conditions	
Provide applicable conditions from watershed - based plans including WIHMPs and TMDLS.	Santa Ana River Basin Plan

Section II Project Description

II.1 PROJECT DESCRIPTION AND PURPOSE

Provide a detailed project description including:

- Project areas;
- Land uses;
- Land cover;
- Design elements;
- A general description not broken down by drainage management areas (DMAs).

Include attributes relevant to determining applicable source controls. Refer to Section 2.2 in the Technical Guidance Document (TGD) for information that must be included in the project description.

Description of Proposed Project					
Development Category (From Model WQMP, Table 7.11-2; or -3):	8. All significant redevelopment projects, where significant redevelopment is defined as the addition or replacement of 5,000 or more square feet (sq ft) of impervious surface on an already developed site. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. If the redevelopment results in the addition or replacement of less than 50 percent of the impervious area on-site and the existing development was not subject to the WQMP requirement, the numeric sizing criteria discussed in Section 7.II-2.0 only applies to the addition or replacement area. If the addition or replacement accounts for 50 percent or more of the impervious area, the Project WQMP requirements apply to the entire development.				
Project Area (sq ft): 200,000	Number of Dwelling Units: 0		SIC Code: 7538 (to be confirmed with County)		
Project Area	Pervious		Impervious		Total
	Area (acres or sq ft)	Percentage	Area (acres or sq ft)	Percentage	
Pre-Project Conditions	To be determined (TBD) during final design (minor landscaping only)	TBD	TBD during final design (majority of 11.3 acres)	TBD	Approximate: 200,000 sq ft (4.59 acres)

Description of Proposed Project					
Post-Project Conditions	TBD during final design (landscaping/ bioretention/ other pervious)	TBD		TBD	Approximate: 200,000 sq ft (4.59 acres)
Drainage Patterns/Connections	Under existing conditions, the Site is generally level and slopes slightly from north to south. Stormwater runoff sheet flows toward the centerline concrete gutter within the Paved Apron and Alley Layout and is collected into the municipal storm drain system along Grand Avenue. No natural drainage channels are present on the Site. Under post-development conditions, an internal storm drain network will collect roof and pavement runoff and route it through proposed water quality best management practices (BMPs) and underground detention before discharge to the existing public storm drain system along Grand Avenue. Post-development peak discharges at the connection to the public storm drain will be mitigated so they do not exceed existing conditions. Final inlet locations, pipe alignments, and connection details will be confirmed during final design. The Site is located within the Newport Bay watershed, which drains to Upper Newport Bay and ultimately the Pacific Ocean. Regional topography slopes gently toward the southwest. <i>(Preliminary characterization; subject to confirmation during detailed design.)</i>				
Narrative Project Description: (Use as much space as necessary.)	The proposed project is the Orange County Fleet Services Facility (Grand Avenue Fleet Garage), a new fleet services facility on County-owned land at 1300-1400 South Grand Avenue in the City of Santa Ana. The project consolidates existing OC Fleet Services operations at 445 Civic Center West and 1102 East Fruit Street into a single site adjacent to existing County offices and the County Data Center. The Site consists of two contiguous parcels totaling approximately 11.3 acres in a developed urban setting. The area is currently largely paved and used for parking, storage, and laydown, with minor landscaping. Topography is generally level, with slight grading and drainage to the municipal storm drain system along Grand Avenue. The proposed development encompasses two contiguous parcels totaling approximately 11.3 acres. The project footprint will occupy roughly 200,000 sq ft (4.59 acres) and include two primary structures: • Fleet Maintenance and Administration Building: approximately 45,706 sq ft, housing vehicle service bays, administrative offices, technician workspaces, and storage areas. • Operations Support Building: approximately 20,000 sq ft, designed to accommodate future facility operations.				

Description of Proposed Project

Additional Site improvements include:

- A solar canopy structure of approximately 10,000 sq ft over designated parking spaces.
- Surface parking areas (about 70,000 sq ft) for staff, visitors, emergency vehicles, delivery trucks, and fleet vehicles.
- Access roads totaling approximately 50,000 sq ft extending from existing driveways on McFadden Avenue and South Grand Avenue.
- An open disposal lot of approximately 5,000 to 10,000 sq ft for storage of about 20 decommissioned police vehicles prior to auction.
- Security fencing, controlled access gates, Site lighting, wayfinding signage, and drought-tolerant landscaping consistent with County standards.
- Two points of ingress and egress will provide efficient circulation for fleet vehicles and staff.

The facility will continue existing OC Fleet Services core functions, including maintenance and repair of over 3,000 County-owned vehicles and equipment, emissions compliance and reporting, and support of County fueling operations and vehicle operations programs. Operations will involve the use and storage of automotive fluids, fuels, solvents, batteries, and related hazardous materials in compliance with applicable federal, state, and County regulations.

The project will install a new storm drain system with underground detention and water quality BMPs, such as modular wetland units or bioretention, to comply with the Orange County Hydrology Manual and the Model WQMP. These features will manage increased impervious cover and runoff potential, maintain post-development peak flows at or below existing discharge rates at the connection to the public system, and provide required treatment of stormwater runoff. All hydrologic and hydraulic calculations are preliminary and will be refined based on detailed survey, geotechnical data, and finalized building and site layouts.

Important Note: This plan is based on conceptual site layouts and preliminary assumptions. Calculations and design recommendations herein are intended for planning purposes only and will be refined in a future version once detailed survey data, finalized building footprints, and additional project information become available.

II.2 POTENTIAL STORMWATER POLLUTANTS

Pollutants of Concern			
Pollutant	Check One for each: E = Expected to be of concern N = Not Expected to be of concern		Additional Information and Comments
Suspended-Solid/ Sediment	E ☒	N ☐	
Nutrients	E ☒	N ☐	
Heavy Metals	E ☒	N ☐	
Pathogens (Bacteria/Virus)	E ☒	N ☐	
Pesticides	E ☒	N ☐	
Oil and Grease	E ☒	N ☐	
Toxic Organic Compounds	E ☒	N ☐	
Trash and Debris	E ☒	N ☐	

II.3 HYDROLOGIC CONDITIONS OF CONCERN

Determine if streams located downstream from the project area are potentially susceptible to hydromodification impacts. Refer to Section 2.2.3.1 in the Technical Guidance Document (TGD) for North Orange County or Section 2.2.3.2 for South Orange County.

☒ No – Show map

☐ Yes – Describe applicable hydrologic conditions of concern below. Refer to Section 2.2.3 in the Technical Guidance Document (TGD).

The Site does not fall within a designated hydromodification management area.

A map showing the Site outside of designated hydromodification areas will be provided with the final WQMP and will be based on the most recent County hydromodification screening tools.

II.4 POST DEVELOPMENT DRAINAGE CHARACTERISTICS

Describe post development drainage characteristics. Refer to Section 2.2.4 in the Technical Guidance Document (TGD).

Under existing conditions, the 11.3-acre Site is largely paved, with minor landscaping, and drains by sheet flow toward the centerline concrete gutter of the internal paved apron and alley layout. Runoff then enters the municipal storm drain system along Grand Avenue. No natural drainage channels cross the Site.

Under proposed conditions, the Site will remain fully urbanized. An internal storm drain network will collect runoff from roofs, paved access roads, parking, and the disposal lot and convey it to underground detention and water quality BMPs before discharging to the existing public storm drain system along Grand Avenue. Drainage management areas will be defined to group similar land covers (roof, pavement, landscaped areas) and to ensure that each area drains to appropriately sized Low Impact Development (LID) BMPs and detention facilities.

Hydrologic modeling for this project used the Modified Rational Method consistent with the Orange County Hydrology Manual. The Site was conceptually represented by two drainage areas (DA-1 and DA-2) with the Rational Method parameters summarized in Table II of the Hydrology and Hydraulics Report. The total area modeled is 11.3 acres. The existing 100-year peak discharge was estimated at 22.5 cubic feet per second (cfs). The proposed unmitigated 100-year peak discharge was estimated at 48.2 cfs, indicating the need for detention. The conceptual design includes underground detention sized such that the mitigated post-development 100-year discharge will be less than or equal to 22.5 cfs at the connection to the public storm drain system.

Final drainage patterns, Drainage Management Area (DMA) boundaries, and detention and BMP sizing will be refined during detailed design based on survey data, finalized grading, and geotechnical information.

II.5 PROPERTY OWNERSHIP/MANAGEMENT

Describe property ownership/management. Refer to Section 2.2.5 in the Technical Guidance Document (TGD).

The Site is owned by the County of Orange. The County, or its designated department, will be responsible for implementation of this WQMP, including construction and long-term operation, inspection, and maintenance of all structural and non-structural BMPs described herein. Upon transfer of any portion of the property, successors-in-interest will assume responsibility for WQMP implementation, including BMP operation and maintenance, as documented through recorded WQMP and property transfer instruments.

Section III. Site Description

III.1 PHYSICAL SETTING

Fill out table with relevant information. Refer to Section 2.3.1 in the Technical Guidance Document (TGD).

Name of Planned Community/Planning Area (if applicable)	Not Applicable
Location/Address	1300-1400 South Grand Avenue, Santa Ana, California 92705 (new addresses to be established as 1310 and 1324 South Grand Avenue for the Fleet Services and Facility Operations buildings, respectively).
General Plan Land Use Designation	Industrial (IND) and Institutional (INS).
Zoning	Light Industrial (M1) – City of Santa Ana zoning.
Acreage of Project Site	Approximately 11.3 acres total; an approximately 200,000-sq-ft (4.59-acre) project footprint.
Predominant Soil Type	Natural Resources Conservation Service (NRCS) Hydrologic Soil Groups B and C.

III.2 SITE CHARACTERISTICS

Fill out table with relevant information and include information regarding BMP sizing, suitability, and feasibility, as applicable. Refer to Section 2.3.2 in the Technical Guidance Document (TGD).

Site Characteristics	
Precipitation Zone	0.7 inches (85th Percentile) (per the North Orange County Technical Guidance Document, December 2013, Exhibit XVI-1, Orange County Rainfall Zones Map)
Topography	The Site is generally level with slight grading typical of urban parcels, sloping gently from north to south toward the existing paved apron and municipal storm drain system along Grand Avenue. No significant elevation changes occur across the project footprint.
Drainage Patterns/Connections	Existing drainage consists of sheet flow to a centerline concrete gutter and collection by the municipal storm drain system. Under proposed conditions, runoff will be collected by a new on-site storm drain system, treated by LID BMPs, detained underground, and discharged to the existing public storm drain system along Grand Avenue at one or more existing connection points. The project Site is located within the Hydrologic Unit Code (HUC) 12-180702040103, corresponding to the Santa Ana-Delhi Channel subwatershed, as defined by the U.S. Geological Survey Watershed Boundary Dataset (WBD). Runoff from this subwatershed drains to the

Site Characteristics	
	Santa Ana-Delhi Channel, then to San Diego Creek, and ultimately to Upper Newport Bay. No natural drainage channels are present on the Site.
Soil Type, Geology, and Infiltration Properties	Soils are mapped as NRCS Hydrologic Soil Groups B and C, indicating moderate to slow infiltration rates. Detailed subsurface conditions and infiltration rates will be confirmed by the project geotechnical investigation. Until infiltration testing is completed, large-scale infiltration BMPs will be considered conceptual and subject to feasibility confirmation.
Hydrogeologic (Groundwater) Conditions	Groundwater depth and seasonal variation at the Site are currently unknown and will be confirmed during geotechnical investigations. No groundwater modeling has been performed at this stage.
Geotechnical Conditions (relevant to infiltration)	A project-specific geotechnical report is being prepared. Preliminary design assumes typical urban fill and native alluvial soils. Final recommendations will address bearing capacity, settlement, infiltration feasibility, and any constraints such as shallow groundwater or low-permeability layers that may limit the use of infiltration BMPs.
Off-Site Drainage	The Site lies within the Newport Bay watershed, with regional drainage trending toward Upper Newport Bay and the Pacific Ocean. Local off-site drainage is conveyed via the municipal storm drain system; off-site flows are not routed through the Site except via underground utilities. No off-site natural channels enter the property.
Utility and Infrastructure Information	The Site is served by existing municipal utilities, including water, sewer, storm drain, and dry utilities. The project will extend and upgrade underground water, sewer, storm drain, power, gas, and telecommunications within the access road alignments to serve the new facility and will connect to existing utility mains at or near the Site boundaries. A solar canopy will reduce demand on the electrical grid. All utility improvements will comply with applicable County and agency standards.

III.3 WATERSHED DESCRIPTION

Fill out table with relevant information and include information regarding BMP sizing, suitability, and feasibility, as applicable. Refer to Section 2.3.3 in the Technical Guidance Document (TGD).

Receiving Waters	The project is located within the Newport Bay watershed. Stormwater runoff from the Site is discharged to the municipal storm drain system and ultimately conveyed to Upper Newport Bay and the Pacific Ocean.
303(d) Listed Impairments	Benthic Community Effects; sedimentation/siltation (sediment); indicator bacteria (pathogens); malathion, toxaphene, and DDT (pesticides); nutrients; selenium; toxicity (total toxics). (San Diego Creek, Reach 1). Benthic Community Effects; sedimentation/siltation (sediment); indicator bacteria (pathogens); toxicity (total toxics); nutrients. (San Diego Creek, Reach 2). Indicator bacteria (pathogens), nutrients, sediment/siltation (sediment), metals (copper), pesticides (DDT, malathion), polychlorinated biphenyls (PCBs), toxicity (total toxics) (Upper Newport Bay).
Applicable TMDLs	Based on the most recent approved total maximum daily loads (TMDLs) for the San Diego Creek/Upper Newport Bay watershed, the following TMDLs are applicable to downstream receiving waters: Bacteria TMDLs for San Diego Creek and Upper Newport Bay Organochlorine Pesticide TMDLs (including DDT and chlordane) for San Diego Creek and Upper Newport Bay PCBs TMDL for Upper Newport Bay No standalone TMDLs have been adopted for metals, nutrients, or sediment in the San Diego Creek or Upper Newport Bay watershed. These constituents are managed through municipal separate storm sewer system (MS4) permit requirements, BMP implementation, and receiving water limitations rather than numeric TMDL allocations. pH and ammonia are Basin Plan water quality parameters, but are not currently listed as impairments on the State of California 303(d) list for San Diego Creek or Upper Newport Bay, and are not subject to adopted TMDLs in this watershed. Accordingly, they are not identified as applicable 303(d) impairments or TMDLs for this project. The following items listed are derived from the California 2020-2022 Integrated Report and are provided for informational context: • DDT, nutrients, sedimentation/siltation, toxaphene (San Diego Creek Reach 1) • Nutrients, sedimentation/siltation, toxicity (San Diego Creek Reach 2) • Organochlorine Pesticide TMDLs (DDT, chlordane) (Upper Newport Bay) • Bacterial TMDLs (San Diego Creek & Upper Newport Bay)

	• Nutrient TMDLs (San Diego Creek/Newport Bay) • PCBs TMDL (Upper Newport Bay) • Sediment-related TMDLs (Newport Bay)
Pollutants of Concern for the Project	Suspended solids/sediment, nutrients, metals, pathogens, pesticides, oil and grease, toxic organic compounds, and trash and debris, consistent with the project land use and activities identified in Section II.2.
Environmentally Sensitive and Special Biological Significant Areas	No environmentally sensitive areas or Areas of Special Biological Significance are located on the Site, which is fully developed with urban uses. Any downstream sensitive areas or special designations in the watershed will be confirmed during final WQMP preparation.

DRAFT

Section IV Best Management Practices (BMPs)

IV.1 PROJECT PERFORMANCE CRITERIA

Describe project performance criteria. Several steps must be followed in order to determine what performance criteria will apply to a project. These steps include:

- If the project has an approved WIHMP or equivalent, then any watershed specific criteria must be used and the project can evaluate participation in the approved regional or sub-regional opportunities. (Please ask your assigned planner or plan checker regarding whether your project is part of an approved WIHMP or equivalent.)
- Determine applicable hydromodification control performance criteria. Refer to Section 7.II-2.4.2.2 of the Model WQMP.
- Determine applicable LID performance criteria. Refer to Section 7.II-2.4.3 of the Model WQMP.
- Determine applicable treatment control BMP performance criteria. Refer to Section 7.II-3.2.2 of the Model WQMP.
- Calculate the LID design storm capture volume for the project. Refer to Section 7.II-2.4.3 of the Model WQMP.

(NOC Permit Area only) Is there an approved WIHMP or equivalent for the project area that includes more stringent LID feasibility criteria or if there are opportunities identified for implementing LID on regional or sub-regional basis?	YES ☐	NO ☒
If yes, describe WIHMP feasibility criteria or regional/sub-regional LID opportunities.		

The Site is in the Santa Ana Region and within the Newport Bay watershed. No approved Watershed Implementation and Hydromodification Management Plan (WIHMP) with more stringent LID criteria or regional LID participation requirements has been identified for the project location at this preliminary stage. This will be confirmed prior to final WQMP approval.

Project Performance Criteria	
If HCOC exists, list applicable hydromodification control performance criteria (Section 7.II-2.4.2.2 in MWQMP)	N/A The Site is located outside designated hydromodification management areas. Hydromodification control BMPs are not required; however, detention will be provided for flood/peak flow control so that post-development peak discharges to the public storm drain do not exceed existing conditions for the 100-year design storm.
List applicable LID performance criteria (Section 7.II-2.4.3 from MWQMP)	The project is a North Orange County Priority Project (significant redevelopment) and must implement Low Impact Development BMPs that: • Retain the LID Design Capture Volume (DCV) onsite through infiltration, evapotranspiration, and rainwater harvesting where feasible; • Biotreat any remaining DCV that cannot be retained; and

Project Performance Criteria	
	- Route each DMA to one or more LID BMPs sized using the County methodology. The LID strategy will prioritize: - Infiltration BMPs where geotechnical and groundwater conditions allow; - Bioretention and modular wetland units for treatment where infiltration is constrained; and - Integration of LID BMPs within landscaped areas and parking lot islands so they receive roof and pavement runoff.
List applicable treatment control BMP performance criteria (Section 7.II-3.2.2 from MWQMP)	If it is not feasible to retain and biotreat the full DCV with LID BMPs due to Site constraints (limited pervious area, utility conflicts, and operational requirements for extensive paving), the project will: - Implement treatment control BMPs sized using the applicable numeric criteria (volume-based or flow-based) in the Model WQMP; and - Place proprietary treatment units on storm drain laterals upstream of the underground detention system or at the connection to the public storm drain along Grand Avenue.
Calculate LID design storm capture volume for Project.	The DCV will be calculated separately for each DMA using the Orange County method: $DCV = C \times A \times d \times 43,560 \times (1/12)$, where C is based on imperviousness. - At this preliminary phase, final drainage areas and impervious percentages are not yet established. DCV calculations and BMP sizing will be provided in the final WQMP once detailed grading and drainage plans are available.

IV.2 SITE DESIGN AND DRAINAGE

Describe site design and drainage including

- A narrative of site design practices utilized or rationale for not using practices;
- A narrative of how site is designed to allow BMPs to be incorporated to the MEP
- A table of DMA characteristics and list of LID BMPs proposed in each DMA.
- Reference to the WQMP "BMP Exhibit."
- Calculation of Design Capture Volume (DCV) for each drainage area.
- A listing of GIS coordinates for LID and Treatment Control BMPs.

Refer to Section 2.4.2 in the Technical Guidance Document (TGD).

Site Design Practices

The project is a redevelopment of a largely impervious industrial site and maintains existing regional drainage patterns while providing improved on-site collection, treatment, and detention. Key site design practices include:

- Consolidating the active fleet operations within an approximate 200,000-sq-ft footprint to limit additional disturbance.
- Locating landscaped and potential bioretention areas adjacent to building frontages, access roads, and parking aisles to allow direct routing of roof and pavement runoff.
- Maintaining logical access road alignments to support heavy vehicle circulation while still providing opportunities to intercept runoff at catch basins or trench drains and route flows through LID BMPs.
- Reserving space for underground detention near the connection(s) to the existing municipal storm drain along Grand Avenue, maximizing flow control efficiency and facilitating maintenance.

How the Site Is Designed to Allow BMPs to the Maximum Extent Practicable (MEP)

Roof downspouts will be routed by surface flow or via drain lines to bioretention areas or modular wetland units located within landscape zones and parking lot islands, to the extent feasible.

Paved parking and drive aisles will drain to catch basins or trench drains that discharge to a treatment train consisting of LID BMPs and underground detention prior to entering the public storm drain system.

BMPs will be sited close to pollutant-generating activities, including vehicle maintenance, parking, and circulation areas, while accounting for safety, access, and structural constraints.

Because a large portion of the Site must remain paved for fleet operations and since soils are mapped as Hydrologic Soil Groups B and C (moderate to slow infiltration), it may not be practicable to meet the entire DCV through infiltration alone. Biotreatment, modular wetlands, and proprietary treatment units will therefore play a key role in achieving performance criteria.

DMA Characteristics and LID BMPs: Definitive DMA boundaries and areas will be established during final design. The following conceptual DMAs and LID BMPs are recommended as a starting point:

DMA-1: Fleet Maintenance & Administration Building Roof

- Approximate Area: TBD; expected to be on the order of 45,700 sq ft.
- Land Cover: Roof (fully impervious).
- Proposed LID BMPs: Bioretention with underdrains or proprietary vegetated modular wetland units located adjacent to the building and within nearby landscape areas.

- Flow Path: Roof drains to leaders; discharge by surface or piped flow to bioretention/modular wetland units; overflow to on-site storm drain and underground detention; then to public storm drain in Grand Avenue.

DMA-2: Operations Support Building Roof

- Approximate Area: TBD; expected to be on the order of 20,000 sq ft.
- Land Cover: Roof (fully impervious).
- Proposed LID BMPs: Similar to DMA-1; bioretention with underdrains or modular wetland units.
- Flow Path: Roof drains to LID BMPs, then to underground detention and public storm drain.

DMA-3: Surface Parking and Access Roads

- Approximate Area: TBD; expected to include approximately 70,000 sq ft of parking and approximately 50,000 sq ft of access roads.
- Land Cover: Paved parking, drive aisles, and associated hardscape.
- Proposed LID BMPs: Bioretention with underdrains in parking lot islands; vegetated swales or modular wetland units along internal drive aisles; proprietary media filters on select storm drain laterals where space is constrained.
- Flow Path: Sheet flow from paved surfaces to curb inlets, trench drains, or swales; treatment by LID BMPs; discharge to underground detention; then to public storm drain.

DMA-4: Disposal Lot and Outdoor Storage

- Approximate Area: approximately 5,000 to 10,000 sq ft.
- Land Cover: Paved or compacted surface used for temporary storage of decommissioned vehicles.
- Proposed LID BMPs: Modular wetland or other proprietary biotreatment unit on the drainage lateral from this area; supplemental canopy, covers, or curbing as needed to minimize exposure of pollutant sources.
- Flow Path: Local drainage directed to catch basins and proprietary treatment unit; then to underground detention and public storm drain.

DMA-5: Landscaped / Bioretention Areas

- Approximate Area: TBD during final design.
- Land Cover: Landscaped planters, parking lot islands, and other pervious areas (including bioretention cells).
- Proposed LID BMPs: Bioretention with or without underdrains, depending on infiltration feasibility; infiltration planters where geotechnical conditions allow.
- Flow Path: Receives diverted roof and pavement runoff; overflow to onsite storm drain and underground detention.

DCV for each drainage area: Because final grading, drainage boundaries, and impervious fractions are still under development, DCV values are currently “TBD.” The final WQMP will include:

- A DCV calculation for each DMA;
- Sizing calculations for each LID BMP showing that combined infiltration, evapotranspiration, and biotreatment achieve the LID DCV to the maximum extent practicable; and

- Documentation of any shortfalls and associated reliance on treatment control BMPs.

GIS coordinates for LID and Treatment Control BMPs: GIS coordinates for each LID and treatment control BMP will be provided in the final WQMP and on the BMP Exhibit. At this preliminary stage, only conceptual locations have been identified.

IV.3 LID BMP SELECTION AND PROJECT CONFORMANCE ANALYSIS

Each sub-section below documents that the proposed design features conform to the applicable project performance criteria via check boxes, tables, calculations, narratives, and/or references to worksheets. Refer to Section 2.4.2.3 in the Technical Guidance Document (TGD) for selecting LID BMPs and Section 2.4.3 in the Technical Guidance Document (TGD) for conducting conformance analysis with project performance criteria.

IV.3.1 Hydrologic Source Controls (HSCs)

If required HSCs are included, fill out applicable check box forms. If the retention criteria are otherwise met with other LID BMPs, include a statement indicating HSCs not required.

Name	Included?
Localized on-lot infiltration	☐
Impervious area dispersion (e.g. roof top disconnection)	☐
Street trees (canopy interception)	☐
Residential rain barrels (not actively managed)	☐
Green roofs/Brown roofs	☐
Blue roofs	☐
Impervious area reduction (e.g. permeable pavers, site design)	☐
Other:	☐
Other:	☐
Other:	☐
Other:	☐
Other:	☐
Other:	☐
Other:	☐
Other:	☐

Hydrologic source controls will be included to the extent feasible during final design. Given the highly urban, industrial nature of the Site and the need for robust pavement, HSCs will supplement but not replace structural LID BMPs.

Because a significant portion of the Site must remain paved for fleet operations, and due to potential constraints related to soil permeability, groundwater, and hazardous materials management, it may not be feasible to meet the complete LID Design Storm Capture Volume via infiltration BMPs alone. The volume that can be retained by infiltration BMPs will be quantified during final design based on tested infiltration rates and available footprint area.

DRAFT

IV.3.2 Infiltration BMPs

Identify infiltration BMPs to be used in project. If design volume cannot be met, state why.

Name	Included?
Bioretention without underdrains	☐
Rain gardens	☐
Porous landscaping	☐
Infiltration planters	☐
Retention swales	☐
Infiltration trenches	☐
Infiltration basins	☐
Drywells	☐
Subsurface infiltration galleries	☐
French drains	☐
Permeable asphalt	☐
Permeable concrete	☐
Permeable concrete pavers	☐
Other:	☐
Other:	☐

Soils are mapped as NRCS Hydrologic Soil Groups B and C, which indicate moderate to slow infiltration capacity. Groundwater conditions and detailed soil properties will be confirmed by a project-specific geotechnical investigation and infiltration testing.

Given the need for heavy pavement to support fleet vehicles and possible depth constraints, full infiltration of the LID DCV across the Site may not be feasible. Infiltration will be targeted to opportunities with favorable soil and groundwater conditions, such as landscaped areas and planters.

At this preliminary stage, the volume of stormwater that can be managed by infiltration BMPs is unknown. The final WQMP will:

- Present infiltration test results;
- Identify where infiltration BMPs are feasible;
- Quantify the portion of the LID DCV managed through infiltration; and
- Document reasons why full DCV cannot be achieved by infiltration alone, if applicable.

Show calculations below to demonstrate if the LID Design Storm Capture Volume can be met with infiltration BMPs. If not, document how much can be met with infiltration and document why it is not feasible to meet the full volume with infiltration BMPs.

The Site soils are mapped as Hydrologic Soil Groups B and C, indicating moderate to slow infiltration rates. Current groundwater conditions and detailed soil properties will be confirmed by a geotechnical investigation and infiltration testing.

Infiltration BMPs, such as bioretention without underdrains, porous landscaping, and infiltration planters, may be considered for the proposed development for landscaped areas and along parking lot edges where geotechnical conditions and groundwater depth permit. Selection, feasibility, and sizing of these BMPs will be finalized once infiltration testing is complete.

IV.3.3 Evapotranspiration, Rainwater Harvesting BMPs

If the full Design Storm Capture Volume cannot be met with infiltration BMPs, describe any evapotranspiration and/or rainwater harvesting BMPs included.

Name	Included?
All HSCs; See Section IV.3.1	☐
Surface-based infiltration BMPs	☐
Biotreatment BMPs	☐
Above-ground cisterns and basins	☐
Underground detention	☐
Other:	☐
Other:	☐
Other:	☐

Show calculations below to demonstrate if the LID Design Storm Capture Volume can be met with evapotranspiration and/or rainwater harvesting BMPs in combination with infiltration BMPs. If not, document below how much can be met with either infiltration BMPs, evapotranspiration, rainwater harvesting BMPs, or a combination, and document why it is not feasible to meet the full volume with these BMP categories.

Evapotranspiration

- Landscaped areas and bioretention cells will provide evapotranspiration of intercepted stormwater, contributing to the management of the LID DCV.
- Final landscape design will favor drought-tolerant plantings with adequate canopy and root structures to support evapotranspiration while minimizing irrigation demands.

Rainwater harvesting

- Actively managed rainwater harvesting (e.g., cisterns) is not currently proposed because:
 - Practical non-potable reuse opportunities at the fleet facility are limited;

- The Site is already highly impervious and operationally constrained; and
 - Added operational complexity and maintenance may outweigh benefits for this project type.
- This assumption will be revisited during final design if feasible reuse opportunities (e.g., irrigation supply for landscaping) are identified.

The final WQMP will quantify the combined volume managed by infiltration and evapotranspiration (including bioretention) and document any remaining DCV that must be biotreated or treated by flow-through BMPs.

DRAFT

IV.3.4 Biotreatment BMPs

If the full Design Storm Capture Volume cannot be met with infiltration BMPs, and/or evapotranspiration and rainwater harvesting BMPs, describe biotreatment BMPs included. Include sections for selection, suitability, sizing, and infeasibility, as applicable.

Name	Included?
Bioretention with underdrains	☐
Stormwater planter boxes with underdrains	☐
Rain gardens with underdrains	☐
Constructed wetlands	☐
Vegetated swales	☐
Vegetated filter strips	☐
Proprietary vegetated biotreatment systems	☐
Wet extended detention basin	☐
Dry extended detention basins	☐
Other:	☐
Other:	☐

Show calculations below to demonstrate if the LID Design Storm Capture Volume can be met with infiltration, evapotranspiration, rainwater harvesting and/or biotreatment BMPs. If not, document how much can be met with either infiltration BMPs, evapotranspiration, rainwater harvesting BMPs, or a combination, and document why it is not feasible to meet the full volume with these BMP categories.

Biotreatment will likely be the primary mechanism for meeting the LID DCV where infiltration is infeasible or limited. Biotreatment BMPs will be distributed throughout the Site to intercept runoff from individual DMAs.

Potential biotreatment BMPs include:

- Bioretention with underdrains located in landscape strips and parking lot islands.
- Stormwater planter boxes with underdrains along building frontages.
- Vegetated swales or filter strips in select open areas.
- Proprietary vegetated biotreatment systems (e.g., modular wetland units) installed on storm drain laterals upstream of the underground detention system or public storm drain connection.

During final design, biotreatment BMPs will be sized based on:

- DCV from each tributary DMA;
- Approved surface loading rates and ponding depths; and
- Hydraulic constraints (head, depth to outlet, etc.).

Calculations in the final WQMP will demonstrate that the combination of infiltration, evapotranspiration, and biotreatment meets the LID DCV to the maximum extent practicable. Any residual volume not addressed by LID BMPs will be treated through appropriately sized treatment control BMPs.

IV.3.5 Hydromodification Control BMPs

Describe hydromodification control BMPs. See Section 5 of the Technical Guidance Document (TGD). Include sections for selection, suitability, sizing, and infeasibility, as applicable. Detail compliance with Prior Conditions of Approval (if applicable).

Hydromodification Control BMPs	
BMP Name	BMP Description

Hydromodification management criteria do not apply because the Site is located outside designated hydromodification management areas. Nevertheless, to maintain peak flow conditions at the public storm drain connection, the project will provide underground detention so that the mitigated post-development 100-year peak discharge does not exceed the estimated existing 100-year discharge. Detailed hydrologic modeling and detention sizing will be completed as part of the final design.

IV.3.6 Regional/Sub-Regional LID BMPs

Describe regional/sub-regional LID BMPs in which the project will participate. Refer to Section 7.II-2.4.3.2 of the Model WQMP.

Regional/Sub-Regional LID BMPs
No regional or sub-regional LID BMPs or regional facilities have been identified for participation by this project at this time. If such facilities are identified by the County or the City of Santa Ana in the future, opportunities for participation or credit will be evaluated during final WQMP preparation.

IV.3.7 Treatment Control BMPs

Treatment control BMPs can only be considered if the project conformance analysis indicates that it is not feasible to retain the full design capture volume with LID BMPs. Describe treatment control BMPs including sections for selection, sizing, and infeasibility, as applicable.

Treatment Control BMPs	
BMP Name	BMP Description

Due to Site constraints (extensive paving for fleet operations, moderate to slow soil infiltration, and potential groundwater and utility limitations), it may not be feasible to retain and/or biotreat the entire DCV on the Site with LID BMPs alone. Treatment control BMPs will therefore be considered for any portion of the DCV that cannot be managed through LID BMPs.

Potential treatment control BMPs include:

- Proprietary vegetated modular wetland units installed on storm drain laterals from:
 - High-use parking and access areas;
 - The disposal lot; and
 - Other pollutant-generating areas where standard landscape-based LID BMPs are constrained.
- Media-based cartridge or vault filters placed near the point of connection to the existing public storm drain system, if needed to provide additional polishing treatment.

Treatment control BMPs will be sized using the applicable numeric criteria (e.g., treating the DCV or a design flow rate associated with the required storm event), in accordance with the Model WQMP.

The final WQMP will include:

- Sizing calculations for each treatment control BMP;
- A summary table relating each DMA to its LID and treatment control BMPs; and
- Documentation that treatment control BMPs are only used to address the portion of the DCV that cannot be feasibly managed with LID BMPs.

IV.3.8 Non-structural Source Control BMPs

Fill out non-structural source control check box forms or provide a brief narrative explaining if non-structural source controls were not used.

Non-Structural Source Control BMPs				
Identifier	Name	Check One		If not applicable, state brief reason
		Included	Not Applicable	
N1	Education for Property Owners, Tenants and Occupants	☒	☐	Educational materials and signage will be recommended with the final WQMP to inform staff and contractors about stormwater protection practices, proper waste handling, and spill response.
N2	Activity Restrictions	☒	☐	Facility operating procedures will be recommended with the final WQMP to restrict outdoor vehicle maintenance, fueling, and material handling to designated controlled areas.
N3	Common Area Landscape Management	☒	☐	Landscaping management using minimal fertilizers and pesticides, with preference for integrated pest management, will be recommended with the final WQMP.
N4	BMP Maintenance	☒	☐	An Operations and Maintenance Plan defining inspections and maintenance tasks will be recommended with the final WQMP.
N5	Title 22 CCR Compliance (How development will comply)	☒	☐	Hazardous waste management will comply with Title 22 requirements through the facility's hazardous materials program.
N6	Local Industrial Permit Compliance	☒	☐	The County will comply with applicable industrial stormwater permits and local discharge requirements.
N7	Spill Contingency Plan	☒	☐	A spill response and cleanup plan will address spills of fuel, oils, and other hazardous materials.
N8	Underground Storage Tank Compliance	☒	☐	If underground storage tanks (USTs) are present, the facility will comply with all UST monitoring, containment, and reporting requirements.
N9	Hazardous Materials Disclosure Compliance	☒	☐	The facility will maintain hazardous materials business plans and disclosures as required by local and state regulations.

Non-Structural Source Control BMPs				
Identifier	Name	Check One		If not applicable, state brief reason
		Included	Not Applicable	
N10	Uniform Fire Code Implementation	☒	☐	Storage and handling of hazardous materials will comply with applicable fire code requirements.
N11	Common Area Litter Control	☒	☐	Regular patrols and trash collection will be conducted to prevent litter from entering the storm drain system.
N12	Employee Training	☒	☐	Staff training will cover BMP implementation, spill response, and good housekeeping practices.
N13	Housekeeping of Loading Docks	☒	☐	Loading and unloading areas will be kept clean and managed to prevent pollutants from entering storm drains.
N14	Common Area Catch Basin Inspection	☒	☐	Catch basins and inlets will be inspected and cleaned routinely, especially before and during the wet season.
N15	Street Sweeping Private Streets and Parking Lots	☒	☐	Regular sweeping of internal roads and parking areas will remove sediment and debris.
N16	Retail Gasoline Outlets	☐	☒	The project does not include a retail gas station; onsite fueling areas will be managed through other BMPs.

The applicable checked items above are preliminary and will be finalized with the final WQMP.

IV.3.9 Structural Source Control BMPs

Fill out structural source control check box forms or provide a brief narrative explaining if structural source controls were not used.

Structural Source Control BMPs				
Identifier	Name	Check One		If not applicable, state brief reason
		Included	Not Applicable	
S1	Provide storm drain system stenciling and signage	☒	☐	Catch basins and inlets will be labeled with "No Dumping – Flows to Ocean" or similar messaging.
S2	Design and construct outdoor material storage areas to reduce pollution introduction	☒	☐	Any outdoor material storage will be covered, bermed, or otherwise protected from contact with stormwater.
S3	Design and construct trash and waste storage areas to reduce pollution introduction	☒	☐	Trash enclosures will be roofed and graded to prevent stormwater run-on and runoff, with drains directed to the sanitary sewer where allowed.
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control	☒	☐	Irrigation will be designed to minimize runoff and overspray, with smart controllers where feasible.
S5	Protect slopes and channels and provide energy dissipation	☒	☐	The Site is generally level, but energy dissipation measures will be provided at concentrated discharge points if needed.
	Incorporate requirements applicable to individual priority project categories (from SDRWQCB NPDES Permit)	☐	☐	
S6	Dock areas	☒	☐	If loading docks are present, dock areas will be graded and drained to minimize stormwater contact with pollutants.
S7	Maintenance bays	☒	☐	Interior maintenance bays will drain to the sanitary sewer or oil-water separators, not to the storm drain system.

Structural Source Control BMPs				
Identifier	Name	Check One		If not applicable, state brief reason
		Included	Not Applicable	
S8	Vehicle wash areas	☒	☐	Will be included if vehicle washing is conducted in a designated wash area with appropriate collection and treatment/disposal.
S9	Outdoor processing areas	☒	☐	Will be included as applicable. Any outdoor processing will be located and designed to minimize pollutant contact with stormwater.
S10	Equipment wash areas	☒	☐	Will be included as applicable. Equipment washing will be conducted in controlled areas connected to the sanitary sewer or treatment systems.
S11	Fueling areas	☒	☐	Fueling areas will be paved, covered where feasible, graded away from storm drains, and equipped with spill containment features.
S12	Hillside landscaping	☐	☒	Not applicable; the Site is generally level.
S13	Wash water control for food preparation areas	☐	☒	Not applicable; no commercial food preparation is anticipated.
S14	Community car wash racks	☐	☒	Not applicable.

IV.4 ALTERNATIVE COMPLIANCE PLAN (IF APPLICABLE)

Describe an alternative compliance plan (if applicable). Include alternative compliance obligations (i.e., gallons, pounds) and describe proposed alternative compliance measures. Refer to Section 7.II 3.0 in the WQMP.

IV.4.1 Water Quality Credits

Determine if water quality credits are applicable for the project. Refer to Section 3.1 of the Model WQMP for description of credits and Appendix VI of the Technical Guidance Document (TGD) for calculation methods for applying water quality credits.

Description of Proposed Project				
Project Types that Qualify for Water Quality Credits (Select all that apply):				
☐ Redevelopment projects that reduce the overall impervious footprint of the project site.	☐ Brownfield redevelopment, meaning redevelopment, expansion, or reuse of real property which may be complicated by the presence or potential presence of hazardous substances, pollutants or contaminants, and which have the potential to contribute to adverse ground or surface WQ if not redeveloped.		☐ Higher density development projects which include two distinct categories (credits can only be taken for one category): those with more than seven units per acre of development (lower credit allowance); vertical density developments, for example, those with a Floor to Area Ratio (FAR) of 2 or those having more than 18 units per acre (greater credit allowance).	
☐ Mixed use development, such as a combination of residential, commercial, industrial, office, institutional, or other land uses which incorporate design principles that can demonstrate environmental benefits that would not be realized through single use projects (e.g. reduced vehicle trip traffic with the potential to reduce sources of water or air pollution).		☐ Transit-oriented developments, such as a mixed use residential or commercial area designed to maximize access to public transportation; similar to above criterion, but where the development center is within one half mile of a mass transit center (e.g. bus, rail, light rail or commuter train station). Such projects would not be able to take credit for both categories, but may have greater credit assigned		☐ Redevelopment projects in an established historic district, historic preservation area, or similar significant city area including core City Center areas (to be defined through mapping).
☐ Developments with dedication of undeveloped portions to parks, preservation areas and other pervious uses.	☐ Developments in a city center area.	☐ Developments in historic districts or historic preservation areas.	☐ Live-work developments, a variety of developments designed to support residential and vocational needs together – similar to criteria to mixed use development; would not be able to take credit for both categories.	☐ In-fill projects, the conversion of empty lots and other underused spaces into more beneficially used spaces, such as residential or commercial areas.
Calculation of Water Quality Credits (if applicable)				

The project is a significant redevelopment of an already developed industrial site and may qualify as an infill/redevelopment project in an urbanized area. At this preliminary stage, water quality credits have not been quantified or applied. Final determination of eligibility and the magnitude of any credits will be made in the final WQMP based on the most current Model WQMP guidance and project details.

IV.4.2 Alternative Compliance Plan Information

Describe an alternative compliance plan (if applicable). Include alternative compliance obligations (i.e., gallons, pounds) and describe proposed alternative compliance measures. Refer to Section 7.II 3.0 in the Model WQMP.

No off-site or alternative compliance program is currently proposed. If it is demonstrated during final design that (i) the full LID DCV cannot be met on the Site, despite implementation of all feasible LID BMPs, and (ii) no additional on-site opportunities exist, then the project proponent may evaluate participation in an approved alternative compliance program, if available, consistent with Model WQMP provisions.

Section V Inspection/Maintenance Responsibility for BMPs

Fill out information in table below. Prepare and attach an Operation and Maintenance Plan. Identify the funding mechanism through which BMPs will be maintained. Inspection and maintenance records must be kept for a minimum of five years for inspection by the regulatory agencies. Refer to Section 7.II 4.0 in the Model WQMP.

BMP Inspection/Maintenance			
BMP	Reponsible Party(s)	Inspection/ Maintenance Activities Required	Minimum Frequency of Activities

Detailed inspection and maintenance procedures will be documented in a separate O&M Plan attached to the final WQMP.

Section VI BMP Exhibit (Site Plan)

VI.1 BMP EXHIBIT (SITE PLAN)

Include a BMP Exhibit (Site Plan), at a size no less than 24" by 36," which includes the following minimum information: Insert in the title block (lower right hand corner) of BMP Exhibit: the WQMP Number (assigned by staff) and the grading/building or Planning Application permit numbers

- *Project location (address, tract/lot number(s), etc.)*
- *Site boundary*
- *Land uses and land covers, as applicable*
- *Suitability/feasibility constraints*
- *Structural BMP locations*
- *Drainage delineations and flow information*
- *Delineate the area being treated by each structural BMP*
- *GIS coordinates for LID and Treatment Control BMPs*
- *Drainage connections*
- *BMP details*
- *Preparer name and stamp*

Please do not include any areas outside of the project area or any information not related to drainage or water quality. The approved BMP Exhibit (Site Plan) shall be submitted as a plan sheet on all grading and building plan sets submitted for plan check review and approval. The BMP Exhibit shall be at the same size as the rest of the plan sheets in the submittal and shall have an approval stamp and signature prior to plan check submittal.

The final BMP Exhibit will be included with the final WQMP.

VI.2 SUBMITTAL AND RECORDATION OF WATER QUALITY MANAGEMENT PLAN

Following approval of the Final Project-Specific WQMP, three copies of the approved WQMP (including BMP Exhibit, Operations and Maintenance (O&M) Plan, and Appendices) shall be submitted. In addition, these documents shall be submitted in a PDF format.

Each approved WQMP (including BMP Exhibit, Operations and Maintenance (O&M) Plan, and Appendices) shall be recorded in the Orange County Clerk-Recorder's Office, prior to close-out of grading and/or building permit. Educational Materials are not required to be included.

Once the Final Project-Specific WQMP is approved, the County will:

- Submit the required number of hard copies and electronic (PDF) copies of the WQMP, BMP Exhibit, and O&M Plan; and
- Record the approved WQMP and associated documents with the Orange County Clerk-Recorder's Office prior to grading and/or building permit close-out, as required.

Section VII Educational Materials

Refer to the Orange County Stormwater Program ([ocwatersheds.com](http://www.ocwatersheds.com)) for a library of materials available. Please only attach the educational materials specifically applicable to this project. Other materials specific to the project may be included as well and must be attached.

1.0 INTRODUCTION

1.1 Purpose of Analysis and Study Objectives

This Noise Impact Analysis has been prepared to determine the noise impacts associated with the proposed New Fleet Services Facility project (proposed project). The following is provided in this report:

- A description of the study area and the proposed project;
- Information regarding the fundamentals of noise;
- Information regarding the fundamentals of vibration;
- A description of the local noise guidelines and standards;
- An evaluation of the current noise environment;
- An analysis of the potential short-term construction-related noise impacts from the proposed project; and
- An analysis of long-term operations-related noise impacts from the proposed project.

1.2 Site Location and Study Area

The project site is located at 1400 S. Grand Avenue in the City of Santa Ana (City). The approximately 4.59-acre project site is mostly vacant other than the western and northern portions that are currently paved and is bounded by John F. Kennedy Elementary School and McFadden Avenue to the north, the Orange County Operations Center and a County Data Center located to the west, industrial uses to the south, and the Union Pacific Santa Ana Industrial Lead (Railroad) and multi-family residential uses to the west. The project study area is shown in Figure 1.

Sensitive Receptors in Project Vicinity

The nearest sensitive receptor to the project site is the John F. Kennedy Elementary School (JFK School) that is adjacent to the north side of the project site. There are also the multi-family homes that are as near as 55 feet west of the project site.

1.3 Proposed Project Description

The OC Fleet Services offices are currently located at 445 Civic Center West and 1102 East Fruit Street in the City of Santa Ana. The proposed project would consist of the relocation and consolidation of the two existing facilities into a new 45,706 square foot Fleet Services Building that will include vehicle maintenance bays, administrative staff offices, technician workspaces, and storage spaces. In addition, the project will include a 10,000 square foot solar panel canopy, surface parking spaces, extended access road, and a disposal lot. The Fleet Services Facility is proposed to be addressed as 1310 South Grand Avenue. The proposed project would extend the existing access roads to provide ingress and egress for the Project site via the existing driveways off McFadden Avenue and South Grand Avenue. The proposed site plan is shown in Figure 2.

Construction of the proposed project is expected to occur from December 2026 to May 2028, over an 18-month period. Construction activities will take place from 7:00 a.m. to 8:00 p.m. Monday through Saturday and no construction work will occur on Sundays or Federal holidays, per the County's Noise Control ordinance. Operations would primarily consist of providing maintenance and repair services to over 3,000 County-owned vehicles and equipment. These services ensure the safety and longevity of

County-owned vehicles while maintaining compliance with vehicle rules and regulations. Approximately 50 employees would operate the proposed facility Monday through Friday.

1.4 Standard Noise Regulatory Conditions

The proposed project will be required to comply with the following regulatory conditions from the City, County, and State.

City of Santa Ana Municipal Code

The following lists the noise regulations from the City's Municipal Code that are applicable, but not limited to the proposed project.

- Section 18-312(a) – Exterior Noise Standards
- Section 18-314(a) – Construction Noise Standards

County of Orange Municipal Code

The following lists the noise regulations from the County's Municipal Code that are applicable, but not limited to the proposed project.

- Section 4-6-5 – Exterior Noise Standards
- Section 4-6-7(e) – Construction Noise Exemption
- Section 7-1-822 – Construction time restrictions

State of California Rules

The following lists the State of California noise regulations that are applicable, but not limited to the proposed project.

- California Vehicle Code Section 2700-27207 – On Road Vehicle Noise Limits
- California Vehicle Code Section 38365-38350 – Off-Road Vehicle Noise Limits

1.5 Summary of Analysis Results

The following is a summary of the proposed project's impacts with regard to the State CEQA Guidelines noise checklist questions.

Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially significant impact. Implementation of Mitigation Measure 1 would reduce this impact to less than significant levels.

Generation of excessive groundborne vibration or groundborne noise levels?

Less than significant impact.

For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Less than significant impact.

1.6 Project Design Features Incorporated into the Proposed Project

This analysis has accounted for the following Project Design Feature that is detailed in the project description for the proposed project.

Project Design Feature 1:

The project applicant shall install the 12 foot high and approximately 1,200 foot long concrete masonry unit (CMU) wall at the location of the New Wall as shown above in Figure 2 – Site Plan, prior to the start of site preparation activities.

1.7 Mitigation Measures for the Proposed Project

This analysis found that through adherence to the noise and vibration regulations detailed in Section 1.4 above and through implementation of Project Design Feature 1 and the following mitigation all noise and vibration impacts would be reduced to less than significant levels.

Mitigation Measure 1:

The project applicant shall require the Body Shop to operate with all exterior doors closed between the hours of 10:00 p.m. and 7:00 a.m..

Proposed Site Plan

2.0 NOISE FUNDAMENTALS

Noise is defined as unwanted sound. Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Sound is produced by the vibration of sound pressure waves in the air. Sound pressure levels are used to measure the intensity of sound and are described in terms of decibels. The decibel (dB) is a logarithmic unit which expresses the ratio of the sound pressure level being measured to a standard reference level. A-weighted decibels (dBA) approximate the subjective response of the human ear to a broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear.

2.1 Noise Descriptors

Noise Equivalent sound levels are not measured directly, but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (Leq) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. The peak traffic hour Leq is the noise metric used by California Department of Transportation (Caltrans) for all traffic noise impact analyses.

The Day-Night Average Level (Ldn) is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time of day corrections require the addition of ten decibels to sound levels at night between 10 p.m. and 7 a.m. While the Community Noise Equivalent Level (CNEL) is similar to the Ldn, except that it has another addition of 4.77 decibels to sound levels during the evening hours between 7 p.m. and 10 p.m. These additions are made to the sound levels at these time periods because during the evening and nighttime hours, when compared to daytime hours, there is a decrease in the ambient noise levels, which creates an increased sensitivity to sounds. For this reason, the sound appears louder in the evening and nighttime hours and is weighted accordingly. The City and County rely on the CNEL noise standard to assess transportation-related impacts on noise sensitive land uses.

2.2 Tone Noise

A pure tone noise is a noise produced at a single frequency and laboratory tests have shown that humans are more perceptible to changes in noise levels of a pure tone. For a noise source to contain a “pure tone,” there must be a significantly higher A-weighted sound energy in a given frequency band than in the neighboring bands, thereby causing the noise source to “stand out” against other noise sources. A pure tone occurs if the sound pressure level in the one-third octave band with the tone exceeds the average of the sound pressure levels of the two contiguous one-third octave bands by:

- 5 dB for center frequencies of 500 hertz (Hz) and above
- 8 dB for center frequencies between 160 and 400 Hz
- 15 dB for center frequencies of 125 Hz or less

2.3 Noise Propagation

From the noise source to the receiver, noise changes both in level and frequency spectrum. The most obvious is the decrease in noise as the distance from the source increases. The manner in which noise reduces with distance depends on whether the source is a point or line source as well as ground

absorption, atmospheric effects and refraction, and shielding by natural and manmade features. Sound from point sources, such as air conditioning condensers, radiate uniformly outward as it travels away from the source in a spherical pattern. The noise drop-off rate associated with this geometric spreading is 6 dBA per each doubling of the distance (dBA/DD). Transportation noise sources such as roadways are typically analyzed as line sources, since at any given moment the receiver may be impacted by noise from multiple vehicles at various locations along the roadway. Because of the geometry of a line source, the noise drop-off rate associated with the geometric spreading of a line source is 3 dBA/DD.

2.4 Ground Absorption

The sound drop-off rate is highly dependent on the conditions of the land between the noise source and receiver. To account for this ground-effect attenuation (absorption), two types of site conditions are commonly used in traffic noise models, soft-site and hard-site conditions. Soft-site conditions account for the sound propagation loss over natural surfaces such as normal earth and ground vegetation. For point sources, a drop-off rate of 7.5 dBA/DD is typically observed over soft ground with landscaping, as compared with a 6.0 dBA/DD drop-off rate over hard ground such as asphalt, concrete, stone and very hard packed earth. For line sources a 4.5 dBA/DD is typically observed for soft-site conditions compared to the 3.0 dBA/DD drop-off rate for hard-site conditions. Caltrans research has shown that the use of soft-site conditions is more appropriate for the application of the Federal Highway Administration (FHWA) traffic noise prediction model used in this analysis.

3.0 GROUND-BORNE VIBRATION FUNDAMENTALS

Ground-borne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. The effects of ground-borne vibrations typically only cause a nuisance to people, but at extreme vibration levels damage to buildings may occur. Although ground-borne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. Ground-borne noise is an effect of ground-borne vibration and only exists indoors, since it is produced from noise radiated from the motion of the walls and floors of a room and may also consist of the rattling of windows or dishes on shelves.

3.1 *Vibration Descriptors*

There are several different methods that are used to quantify vibration amplitude such as the maximum instantaneous peak in the vibrations velocity, which is known as the peak particle velocity (PPV) or the root mean square (rms) amplitude of the vibration velocity. Due to the typically small amplitudes of vibrations, vibration velocity is often expressed in decibels and is denoted as (L_v) and is based on the rms velocity amplitude. A commonly used abbreviation is “VdB”, which in this text, is when L_v is based on the reference quantity of 1 micro inch per second.

3.2 *Vibration Perception*

Typically, developed areas are continuously affected by vibration velocities of 50 VdB or lower. These continuous vibrations are not noticeable to humans whose threshold of perception is around 65 VdB. Off-site sources that may produce perceptible vibrations are usually caused by construction equipment, steel-wheeled trains, and traffic on rough roads, while smooth roads rarely produce perceptible ground-borne noise or vibration.

3.3 *Vibration Propagation*

The propagation of ground-borne vibration is not as simple to model as airborne noise. This is due to the fact that noise in the air travels through a relatively uniform median, while ground-borne vibrations travel through the earth which may contain significant geological differences. There are three main types of vibration propagation; surface, compression, and shear waves. Surface waves, or Rayleigh waves, travel along the ground’s surface. These waves carry most of their energy along an expanding circular wave front, similar to ripples produced by throwing a rock into a pool of water. P-waves, or compression waves, are body waves that carry their energy along an expanding spherical wave front. The particle motion in these waves is longitudinal (i.e., in a “push-pull” fashion). P-waves are analogous to airborne sound waves. S-waves, or shear waves, are also body waves that carry energy along an expanding spherical wave front. However, unlike P-waves, the particle motion is transverse or “side-to-side and perpendicular to the direction of propagation.”

As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. As stated above, this drop-off rate can vary greatly depending on the soil but has been shown to be effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests.

4.0 REGULATORY SETTING

Noise regulations are addressed through the efforts of various federal, state, and local government agencies. The agencies responsible for regulating noise are discussed below.

4.1 Federal Regulations

The adverse impact of noise was officially recognized by the federal government in the Noise Control Act of 1972, which serves three purposes:

- Promulgating noise emission standards for interstate commerce
- Assisting state and local abatement efforts
- Promoting noise education and research

The Federal Office of Noise Abatement and Control (ONAC) was initially tasked with implementing the Noise Control Act. However, the ONAC has since been eliminated, leaving the development of federal noise policies and programs to other federal agencies and interagency committees. For example, the Occupational Safety and Health Administration (OSHA) agency prohibits exposure of workers to excessive sound levels. The Department of Transportation (DOT) assumed a significant role in noise control through its various operating agencies. The Federal Aviation Administration (FAA) regulates noise of aircraft and airports. Surface transportation system noise is regulated by a host of agencies, including the Federal Transit Administration (FTA). Transit noise is regulated by the FTA, while freeways that are part of the interstate highway system are regulated by the Federal Highway Administration (FHWA). Finally, the federal government actively advocates that local jurisdictions use their land use regulatory authority to arrange new development in such a way that “noise sensitive” uses are either prohibited from being sited adjacent to a highway or, alternately that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Although the proposed project is not under the jurisdiction of the FTA, the *Transit Noise and Vibration Impact Assessment Manual* (FTA Manual), prepared by the FTA, September 2018, is a guidance document from a government agency that provides specific guidance for construction noise. The FTA recommends developing construction noise criteria on a project-specific basis that utilizes local noise ordinances if possible. However, local noise ordinances usually relates to nuisance and hours of allowed activity and sometimes specify limits in terms of maximum levels, but are generally not practical for assessing the noise impacts of a construction project. Project construction noise criteria should take into account the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the adjacent land uses. The FTA standards are based on extensive studies by the FTA and other governmental agencies on the human effects and reaction to noise and a summary of the FTA findings for a Detailed Analysis of construction noise are provided below in Table A. It should be noted that even though the project has been analyzed based on the General Assessment methodology, the more stringent Detailed Analysis construction noise thresholds have been utilized in this analysis.

Table A – FTA Construction Noise Criteria

Land Use	Day (dBA Leq(8-hour))	Night (dBA Leq(8-hour))	30-day Average (dBA Ldn)
Residential	80	70	75
Commercial	85	85	80*
Industrial	90	90	85*

Notes:

* 24-hour Leq not Ldn.

Source: Federal Transit Administration, 2018.

Since the federal government has preempted the setting of standards for noise levels that can be emitted by the transportation sources, the City and County are restricted to regulating the noise generated by the transportation system through nuisance abatement ordinances and land use planning.

4.2 State Regulations

Noise Standards

California Department of Health Services Office of Noise Control

Established in 1973, the California Department of Health Services Office of Noise Control (ONC) was instrumental in developing regulatory tools to control and abate noise for use by local agencies. One significant model is the “Land Use Compatibility for Community Noise Environments Matrix,” which allows the local jurisdiction to clearly delineate compatibility of sensitive uses with various incremental levels of noise.

California Noise Insulation Standards

Title 24, Chapter 1, Article 4 of the California Administrative Code (California Noise Insulation Standards) requires noise insulation in new hotels, motels, apartment houses, and dwellings (other than single-family detached housing) that provides an annual average noise level of no more than 45 dBA CNEL. When such structures are located within a 60-dBA CNEL (or greater) noise contour, an acoustical analysis is required to ensure that interior levels do not exceed the 45-dBA CNEL annual threshold. In addition, Title 21, Chapter 6, Article 1 of the California Administrative Code requires that all habitable rooms, hospitals, convalescent homes, and places of worship shall have an interior CNEL of 45 dB or less due to aircraft noise.

Government Code Section 65302

Government Code Section 65302 mandates that the legislative body of each county and city in California adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines published by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable.

California Vehicle Code Section 27200-27207 – On-Road Vehicle Noise

California Vehicle Code Section 27200-27207 provides noise limits for vehicles operated in California. For vehicles over 10,000 pounds noise is limited to 88 dB for vehicles manufactured before 1973, 86 dB for

vehicles manufactured before 1975, 83 dB for vehicles manufactured before 1988, and 80 dB for vehicles manufactured after 1987. All measurements are based at 50 feet from the vehicle.

California Vehicle Section 38365-38380 – Off-Road Vehicle Noise

California Vehicle Code Section 38365-38380 provides noise limits for off-highway motor vehicles operated in California. 92 dBA for vehicles manufactured before 1973, 88 dBA for vehicles manufactured before 1975, 86 dBA for vehicles manufactured before 1986, and 82 dBA for vehicles manufactured after December 31, 1985. All measurements are based at 50 feet from the vehicle.

Vibration Standards

Title 14 of the California Administrative Code Section 15000 requires that all state and local agencies implement the California Environmental Quality Act (CEQA) Guidelines, which requires the analysis of exposure of persons to excessive groundborne vibration. However, no statute has been adopted by the state that quantifies the level at which excessive groundborne vibration occurs.

Caltrans issued the *Transportation and Construction Vibration Guidance Manual*, April 2020. The Manual provides practical guidance to Caltrans engineers, planners, and consultants who must address vibration issues associated with the construction, operation, and maintenance of Caltrans projects. However, this manual is also used as a reference point by many lead agencies and CEQA practitioners throughout California, as it provides numeric thresholds for vibration impacts. Thresholds are established for continuous (construction-related) and transient (transportation-related) sources of vibration, which found that the human response becomes distinctly perceptible at 0.25 inch per second PPV for transient sources and 0.04 inch per second PPV for continuous sources.

4.3 Local Regulations

The City and County General Plans and Municipal Codes establishes the following goals, policies and regulations related to noise and vibration that are applicable to the proposed project.

City of Santa Ana General Plan Noise Element

Definition of undesirable or unhealthful noise levels must precede the goal of minimizing noise problems. The City of Santa Ana adopts the following standards and guidelines for noise levels for land uses:

Table B – City of Santa Ana Interior and Exterior Noise Standards

Categories	Land Use Categories	Noise Standard (dBA)	
		Interior(1)	Exterior(2)
Residential	Single-family, duplex, multi-family	45 ⁽³⁾	65
Institutional	Hospital, school classroom/playgrounds	45	65
	Church, library	45	--
Open Space	Parks	--	65

Notes:

⁽¹⁾ Interior areas (to include but are not limited to: bedrooms, bathrooms, kitchens, living rooms, dining rooms, closets, corridors/hallways, private offices, and conference rooms.

⁽²⁾ Exterior areas shall mean: private yards of single-family homes, park picnic areas, school playgrounds, common areas, private open space, such as atriums on balconies, shall be excluded from exterior areas provided sufficient common area is included within the project.

⁽³⁾ Interior noise level requirements contemplate a closed window condition. Mechanical ventilation system or other means of natural ventilation shall be provided per Chapter 12, Section 1305 of the Uniform Building Code.

Source: City of Santa Ana General Plan Noise Element, 2010.

Goal 1 Prevent significant increases in noise levels in the community and minimize the adverse effects of currently-existing noise sources.

Policies:

- Require consideration of noise generation potential and susceptibility to noise impacts in the siting, design, and construction of new developments.
- Require mitigating site and building design features, traffic circulation alternatives, insulation, and other noise prevention measures of those new developments which generate high noise levels.
- Sound insulate and/or buffer sensitive land uses such as housing from adverse noise impacts in noise-prone areas.
- Minimize noise generation in residential neighborhoods through control or elimination of truck traffic and through-traffic from these areas.

City of Santa Ana Municipal Code

The City of Santa Ana Municipal Code establishes the following applicable standards related to noise.

Sec. 18-312 Exterior noise standards

- (a) The following noise standards, unless otherwise specifically indicated, shall apply to all residential property within a designated noise zone:

Table C – City of Santa Ana Exterior Noise Standards

Noise Zone ¹	Noise Level	Time Period
1	55 dB(A)	7 a.m. – 10 p.m.
	50 dB(A)	10 p.m. – 7 a.m.

Notes:

¹ Section 18-311 states: "The entire City of Santa Ana is hereby designated as "Noise Zone 1."

Source: City of Santa Ana Municipal Code, Section 18-312.

In the event the alleged offensive noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by five (5) dB(A).

- (b) It is unlawful for any person at any location within the City of Santa Ana to create any noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, when the foregoing causes the noise level, when measured on any other residential property, either incorporated or unincorporated, to exceed:
- (1) The noise standard for a cumulative period of more than thirty (30) minute in any hour; or
 - (2) The noise standard plus five (5) dB(A) for a cumulative period of more than fifteen (15) minutes in any hour; or
 - (3) The noise standard plus ten (10) dB(A) for a cumulative period of more than five (5) minutes in any hour; or
 - (4) The noise standard plus fifteen (15) dB(A) for a cumulative period of more than one minute in any hour; or
 - (5) The noise standard plus twenty (20) dB(A) for any period of time.

- (c) In the event the ambient noise level exceeds any of the first four (4) noise limit categories set forth in subsection (b) of this section, the cumulative period applicable to said category shall be increased to reflect said ambient noise level. In the event the ambient noise level exceeds the fifth noise limit category, the maximum allowable noise level under said category shall be increased to reflect the maximum ambient noise level.

Sec. 18-313 Interior noise standards

- (a) The following interior noise standards, unless otherwise specifically indicated, shall apply to all residential property within a designated noise zone:

Table D – City of Santa Ana Interior Noise Standards

Noise Zone ¹	Noise Level	Time Period
1	55 dB(A)	7 a.m. – 10 p.m.
	45 dB(A)	10 p.m. – 7 a.m.

Notes:

¹ Section 18-311 states: "The entire City of Santa Ana is hereby designated as "Noise Zone 1."

Source: City of Santa Ana Municipal Code, Section 18-313.

In the event the alleged offensive noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by five (5) dB(A).

- (b) It is unlawful for any person at any location within the City of Santa Ana to create any noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, when the foregoing causes the noise level, when measured within any other dwelling unit on any other residential property, to exceed:
- (1) The interior noise standard for a cumulative period of more than five (5) minutes in any hour; or
 - (2) The interior noise standard plus five (5) dB(A) for a cumulative period of more than one minute in any hour; or
 - (3) The interior noise standard plus ten (10) dB(A) for any period of time.
- (c) In the event the ambient noise level exceeds either of the first two (2) noise limit categories above, the cumulative period applicable to said category shall be increased to reflect said ambient noise level. In the event the ambient noise level exceeds the third noise limit category, the maximum allowable noise level under said category shall be increased to reflect the maximum ambient noise level.

Sec. 18-314 Special provisions

The following activities shall be exempted from the provisions of this article:

- (e) Noise sources associated with construction, repair, remodeling, or grading of any real property, provided said activities do not take place between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, including Saturday, or at any time on Sunday or a federal holiday.

Sec. 18-315 Schools, hospitals and churches; special provisions

It shall be unlawful for any person to create any noise which causes the noise level at any school, hospital or church while the same is in use to exceed the noise limits as specified in Section 18-312 prescribed for the assigned noise zone in which the school, hospital or church is located, or which noise level

unreasonably interferes with the use of such institutions or which unreasonably disturbs or annoys patients in the hospital, provided conspicuous signs are displayed in three (3) separate locations within one-tenth (1/10) of a mile of the institution indicating the presence of a school, church or hospital.

County of Orange General Plan Noise Element

Goal 5 Noise/Land Use Planning.

To fully integrate noise considerations in land use planning to prevent new noise/land use conflicts.

Policies:

- 5.1 To utilize the criteria of acceptable noise levels for various types of land uses as depicted on Tables VIII-2 and VIII-3 in the review of development proposals.
- 5.5 To utilize the California Noise Standards for Airports in planning for areas surrounding military as well as civilian airports.

County of Orange Municipal Code

The County of Orange Municipal Code establishes the following applicable standards related to noise.

Sec. 4-6-5. Exterior noise standards

- (a) The following noise standards, unless otherwise specifically indicated, shall apply to all residential property within a designated noise zone:

Table E – County of Orange Exterior Noise Standards

Noise Zone¹	Noise Level	Time Period
1	55 dB(A)	7 a.m. – 10 p.m.
	50 dB(A)	10 p.m. – 7 a.m.

Notes:

¹ Section 4-6-4 states: "The entire territory of Orange County, including incorporated and unincorporated territory, is hereby designated as "Noise Zone 1."

Source: County of Orange Municipal Code, Section 4-6-5.

In the event the alleged offensive noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by five (5) dB(A).

- (b) It shall be unlawful for any person at any location within the unincorporated area of the County to create any noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, when the foregoing causes the noise level, when measured on any other residential property, either incorporated or unincorporated, to exceed:
- (1) The noise standard for a cumulative period of more than thirty (30) minute in any hour; or
 - (2) The noise standard plus five (5) dB(A) for a cumulative period of more than fifteen (15) minutes in any hour; or
 - (3) The noise standard plus ten (10) dB(A) for a cumulative period of more than five (5) minutes in any hour; or

- (4) The noise standard plus fifteen (15) dB(A) for a cumulative period of more than one minute in any hour; or
 - (5) The noise standard plus twenty (20) dB(A) for any period of time.
- (c) In the event the ambient noise level exceeds any of the first four (4) noise limit categories above, the cumulative period applicable to said category shall be increased to reflect said ambient noise level. In the event the ambient noise level exceeds the fifth noise limit category, the maximum allowable noise level under said category shall be increased to reflect the maximum ambient noise level.

Sec. 4-6-6. Interior noise standards

- (a) The following interior noise standards, unless otherwise specifically indicated, shall apply to all residential property within a designated noise zone:

Table F – County of Orange Interior Noise Standards

Noise Zone ¹	Noise Level	Time Period
1	55 dB(A)	7 a.m. – 10 p.m.
	45 dB(A)	10 p.m. – 7 a.m.

Notes:

¹ Section 4-6-4 states: "The entire territory of Orange County, including incorporated and unincorporated territory, is hereby designated as "Noise Zone 1."

Source: County of Orange Municipal Code, Section 4-6-6.

In the event the alleged offensive noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by five (5) dB(A).

- (b) It shall be unlawful for any person at any location within the unincorporate area of the County to create any noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, when the foregoing causes the noise level, when measured within any other dwelling unit on any other residential property, either incorporated or unincorporated, to exceed:
- (1) The interior noise standard for a cumulative period of more than five (5) minutes in any hour; or
 - (2) The interior noise standard plus five (5) dB(A) for a cumulative period of more than one minute in any hour; or
 - (3) The interior noise standard plus ten (10) dB(A) for any period of time.
- (c) In the event the ambient noise level exceeds either of the first two (2) noise limit categories above, the cumulative period applicable to said category shall be increased to reflect said ambient noise level. In the event the ambient noise level exceeds the third noise limit category, the maximum allowable noise level under said category shall be increased to reflect the maximum ambient noise level.

Sec. 4-6-7. Special Provisions

The following activities shall be exempted from the provisions of this article:

- (e) Noise sources associated with construction, repair, remodeling, or grading of any real property, provided said activities do not take place between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, including Saturday, or at any time on Sunday or a Federal holiday.

-
- (i) Noise sources associated with the maintenance of real property, provided said activities take place between 7:00 a.m. and 8:00 p.m. on any day except Sunday or a Federal holiday, or between the hours of 9:00 a.m. and 8:00 p.m. on Sunday or a Federal holiday.

Sec. 4-6-8. Schools, Hospitals and Churches; Special Provisions

It shall be unlawful for any person to create any noise which causes the noise level at any school, hospital or church while the same is in use to exceed the noise limits as specified in section 4-6-5 prescribed for the assigned noise zone in which the school, hospital or church is located, or which noise level unreasonably interferes with the use of such institutions or which unreasonably disturbs or annoys patients in the hospital, provided conspicuous signs are displayed in three (3) separate locations within one-tenth of a mile of the institution indicating the presence of a school, church or hospital.

5.0 EXISTING NOISE CONDITIONS

To determine the existing noise levels, noise measurements have been taken in the vicinity of the project site. The field survey noted that noise within the proposed project area is generally characterized by vehicle traffic on the nearby adjacent roads, mechanical equipment at the nearby buildings, and from school activities.

5.1 Noise Measurements Parameters

The following describes the measurement procedures, measurement locations, and noise measurement results of the noise measurements taken in the project vicinity.

Noise Measurement Equipment

The noise measurements were taken using three Larson Davis Model LXT1 Class 1 sound level meters programmed in “slow” mode to record the sound pressure level at 1-second intervals for 24 hours in “A” weighted form. In addition, the L_{eq} averaged over the entire measuring time and L_{max} were recorded with the three sound level meters. The sound level meters and microphones were mounted on trees and fences, were placed approximately six feet above the ground and were equipped with windscreens during all measurements. The noise meters were calibrated before and after the monitoring using a Larson Davis Cal200 calibrator. All noise level measurement equipment meets American National Standards Institute (ANSI) specifications for sound level meters (ANSI S1.4-2014 standard).

Noise Measurement Locations

The noise monitoring locations were selected in order to obtain noise levels in the vicinity of the project site. Descriptions of the noise monitoring sites are provided below in Table G and are shown in Figure 3. Appendix A includes a photo index of the study area and noise level measurement locations.

Noise Measurement Timing and Climate

The noise measurements were recorded between 10:21 a.m. on Thursday, September 25, 2025 and 10:39 a.m. on Friday, September 26, 2025. At the start of the noise measurements, there were low clouds, the temperature was 71 degrees Fahrenheit, the humidity was 76 percent, barometric pressure was 29.87 inches of mercury, and the wind was blowing around four miles per hour. Overnight, the temperature dropped to 65 degrees Fahrenheit and the humidity peaked at 88 percent. At the conclusion of the noise measurements, there were low clouds, the temperature was 74 degrees Fahrenheit, the humidity was 69 percent, barometric pressure was 29.768 inches of mercury, and the wind was blowing around five miles per hour.

5.2 Noise Measurement Results

The results of the noise level measurements are presented in Table G. The measured sound pressure levels in dBA have been used to calculate the minimum and maximum L_{eq} averaged over 1-hour intervals. Table G also shows the L_{eq} , L_{max} , and CNEL, based on the entire measurement time. The CNEL was calculated through use of Equation 2-23 from *Technical Noise Supplement to the Traffic Noise Analysis Protocol* (TeNS), prepared by Caltrans, September 2013. The noise monitoring data printouts are included in Appendix B. Figure 4 shows a graph of the 24-hour noise measurements.

Table G – Existing (Ambient) Noise Level Measurements

Site No.	Site Description	Average (dBA L _{eq})			24- Hour Average	
		Daytime ¹	Evening ²	Nighttime ³	Leq	CNEL ⁴
1	On fence on east side of JFK Elementary School at corner of existing paved parking area and fenced off undeveloped area.	58.9	56.6	56.7	57.9	63.6
2	On fence at the southeast corner of JFK Elementary School.	55.3	50.1	50.2	53.2	56.7
3	On west property line fence, approximately 90 feet north of southwest property corner.	55.8	53.1	52.5	54.1	58.3

Notes:

¹ Daytime defined as 7:00 a.m. to 7:00 p.m.

² Evening defined as 7:00 p.m. to 10:00 p.m.

³ Nighttime define as 10:00 p.m. to 7:00 a.m.

⁴ The 24-hour average dBA CNEL is calculated by taking the hourly Leq values and adding a penalty of 4.77 dB during the evening hours of 7 to 10 pm and adding a 10 dB penalty during the nighttime hours of 10 pm to 7 am.

Field Noise Measurements Graph

6.0 MODELING PARAMETERS AND ASSUMPTIONS

6.1 Construction Noise

The noise impacts from construction of the proposed project have been analyzed through use of the FHWA's Roadway Construction Noise Model (RCNM). The FHWA compiled noise measurement data regarding the noise generating characteristics of several different types of construction equipment used during the Central Artery/Tunnel project in Boston. Table H below provides a list of the construction equipment anticipated to be used for each phase of construction as detailed in the *Air Quality, Energy and Greenhouse Gas Emissions Impact Analysis New Fleet Services Facility Project* (Air Quality Analysis), prepared by Vista Environmental, April 27, 2026.

Table H – Construction Equipment Noise Emissions and Usage Factors

Equipment Description	Number of Equipment	Acoustical Use Factor ¹ (percent)	Spec 721.560 Lmax at 50 feet ² (dBA, slow ³)	Actual Measured Lmax at 50 feet ⁴ (dBA, slow ³)
Site Preparation				
Rubber Tired Dozers	3	40	85	82
Backhoe	1	40	80	78
Front End Loader	1	40	80	79
Tractors	2	40	84	N/A
Grading				
Excavator	1	40	85	81
Grader	1	40	85	83
Rubber Tired Dozer	1	40	85	82
Backhoe	1	40	80	78
Front End Loader	1	40	80	79
Tractor	1	40	84	N/A
Building Construction				
Crane	1	16	85	81
Forklift (Gradall)	3	40	85	83
Generator	1	50	82	81
Backhoe	1	40	80	78
Front End Loader	1	40	80	79
Tractor	1	40	84	N/A
Welder	1	40	73	74
Paving				
Cement and Mortar Mixer	2	40	85	79
Paver	1	50	85	77
Paving Equipment	2	50	85	77
Rollers	2	20	85	80
Tractor	1	40	84	N/A
Architectural Coating				
Air Compressor	1	40	80	78

Notes:

¹ Acoustical use factor is the percentage of time each piece of equipment is operational during a typical workday.

² Spec 721.560 is the equipment noise level utilized by the RCNM program.

³ The "slow" response averages sound levels over 1-second increments. A "fast" response averages sound levels over 0.125-second increments.

⁴ Actual Measured is the average noise level measured of each piece of equipment during the Central Artery/Tunnel project in Boston, Massachusetts primarily during the 1990s.
Source: Federal Highway Administration, 2006.

Table H also shows the associated measured noise emissions for each piece of equipment from the RCNM model and measured percentage of typical equipment use per day. Construction noise impacts to the nearby sensitive receptors have been calculated according to the equipment noise levels and usage factors listed in Table H and through use of the RCNM. For each phase of construction, the nearest piece of equipment was placed at the shortest distance of the proposed activity to the analyzed receptor and each subsequent piece of equipment was placed an additional 50 feet away, since it is unlikely that two pieces of equipment would operate closer than 50 feet apart.

For the access road to McFadden Avenue improvements that would add approximately 50,000 square feet of paved roadway adjacent to the east side of JFK Elementary School, the analysis was limited to the Site Preparation, Grading and Paving phases of construction, which were analyzed at a distance of 15 feet to the center of the community garden area, since that is the nearest use to the access road improvement area. For the south side of JFK Elementary School, all construction phases were analyzed and were analyzed at a distance of 30 feet to the center of the southern solar canopy, which is the nearest use to the south side of the School. In order to account for the acoustical center of the offroad equipment, it has been assumed that the average width of offroad equipment is 12 feet wide, which would result in an additional 6 feet being added to the distances to the nearby receptors.

Caltrans research has found that sound walls provide 5 dB of noise shielding when the wall reaches the height of line of sight between source and receiver (approximately 10 feet high) and then an additional 0.9 dBA of noise shielding for each foot above the line of sight¹. As such, the proposed 12-foot high sound wall (see Project Design Feature 1) would provide approximately 6.8 dBA of noise reduction, which was entered into the RCNM model. The RCNM printouts are provided in Appendix C.

6.2 Operational Noise

In order to determine the noise impacts created from the potential activities and equipment that will be utilized onsite during the on-going operation of the proposed project, reference noise measurements were taken at the existing fleet services facility located at 1102 E Fruit Street. It should be noted that the fleet services staff were told to conduct the most noise producing activities during the noise measurements, in order to provide a worst-case analysis. Since the HVAC units were not running, during the site visit, a reference noise measurement of a rooftop HVAC unit taken at another service shop was utilized and the noise measurement printouts are provided in Appendix D. Table I provides a summary of the reference noise levels, the height and distance the noise measurement was taken from each source and the measured noise levels from each source.

1 Obtained from: <https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tens-sep2013-a11y.pdf>

Table I – Operational Reference Noise Levels

Noise Source	Reference Noise Measurements ¹				
	Distance - Noise Meter to Source (feet)	Height of Noise Source (feet)	Use Factor (Percent)	Measured Noise Levels	
				dBA Leq	dBA Lmax
Service Bays	30	4	100	65.0	85.4
Siren in Service Bay	30	5	10	76.8	93.4
Bus Bays	30	7	100	70.9	82.2
Compressor at Service Bays ²	8	4	25	83.6	96.8
Body Shop	10	4	75	82.8	92.0
Compressor at Body Shop ²	6	4	25	86.4	88.1
Metal Fabrication Shop	8	4	75	83.1	102.5
Rooftop HVAC Equipment	6	28	50	65.1	80.1

Notes:

¹ See Appendix D for Reference noise measurement printouts.

² The compressors were located outside at ground level, adjacent to the associated use building

The noise levels at the nearby school and homes were calculated based on the methodology provided in the FHWA Highway Traffic Noise Prediction Model (FHWA-RD-77-108) that is described in the *Technical Noise Supplement to the Traffic Noise Analysis Protocol* (TeNS), prepared by Caltrans, September 2013. Since the project site will be mostly paved, the hard site drop off rates for point sources was utilized that results in a drop off rate of 6.0 dB per doubling the distance between source and receptor and was calculated based on the following equation:

$$dBA_2 = dBA_1 + 10\log_{10}[(D_1/D_2)]^1 = dBA_1 + 20\log_{10}(D_1/D_2)$$

where:

dBA₁ = noise level at distance D₁

dBA₂ = noise level at distance D₂

As shown in Section 1.3, not all equipment is anticipated to be operated during the entire workday. The Use Factor provides the percent each piece of equipment will be operated in a typical day and the following Use Factor adjustment formula from the RCNM User Guide was utilized:

$$Leq = Lmax + 10\log(Use\ Factor/100)$$

In order to account for the noise reduction provided by the proposed 12 foot high concrete masonry unit (CMU) sound wall (see Project Design Feature 1), the following noise barrier noise attenuation formulas were utilized and the spreadsheet printouts are provided in Appendix E:

$$N_0 = 2(\delta_0/\gamma)$$

Where:

N₀ = Fresnel number determined along the perpendicular line between source and receiver (i.e., barrier must be perpendicular to the direct noise path)

δ₀ = δ measured along perpendicular line to barrier

γ = wavelength of sound radiated by source

$$\delta = a + b - c$$

Where:

δ = Path length difference

a = distance from source to top of barrier

b = distance from top of barrier to receiver

c = distance from source to receiver (straight line)

6.3 Vibration

Construction activity can result in varying degrees of ground vibration, depending on the equipment used on the site. Operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Buildings in the vicinity of the construction site respond to these vibrations with varying results ranging from no perceptible effects at the low levels to slight damage at the highest levels. Table J gives approximate vibration levels for the listed construction equipment. The data in Table J provides a reasonable estimate for a wide range of soil conditions.

Table J – Vibration Source Levels for Construction Equipment

Equipment		Peak Particle Velocity (inches/second)	Approximate Vibration Level (L_v) at 25 feet
Pile driver (impact)	Upper range	1.518	112
	typical	0.644	104
Pile driver (sonic)	Upper range	0.734	105
	typical	0.170	93
Clam shovel drop (slurry wall)		0.202	94
Vibratory Roller		0.210	94
Hoe Ram		0.089	87
Large bulldozer		0.089	87
Caisson drill		0.089	87
Loaded trucks		0.076	86
Jackhammer		0.035	79
Small bulldozer		0.003	58

Source: Federal Transit Administration, 2020.

The construction-related vibration impacts have been calculated through the vibration levels shown above in Table J and through typical vibration propagation rates. The equipment assumptions were based on the equipment lists provided above in Table H.

7.0 IMPACT ANALYSIS

7.1 CEQA Thresholds of Significance

Consistent with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines, a significant impact related to noise would occur if a proposed project is determined to result in:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generation of excessive groundborne vibration or groundborne noise levels; or
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

7.2 Generation of Noise Levels in Excess of Standards

The proposed project would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. The following section calculates the potential noise emissions associated with the temporary construction activities and long-term operations of the proposed project and compares the noise levels to the City and County standards.

Construction-Related Noise

The construction activities for the proposed project are anticipated to include site preparation and grading of the project site, building construction of the Fleet Services Building and solar panel canopy, paving of the onsite roads, disposal lot, and parking areas, and application of architectural coatings. Noise impacts from construction activities associated with the proposed project would be a function of the noise generated by construction equipment, equipment location, sensitivity of nearby land uses, and the timing and duration of the construction activities.

Section 18-314(e) of the City's Municipal Code exempts construction noise that occurs between 7:00 a.m. and 8:00 p.m. on weekdays from the City's noise standards. Section 4-6-7(e) of the County's Municipal Code exempts construction noise that occurs between 7:00 a.m. and 8:00 p.m. on weekdays from the County's noise standards. Since, neither Municipal Code provides any limits to the noise levels that may be created from construction activities that occur during the allowable times for construction, the FTA construction noise thresholds shown above in Table A have been utilized that limit noise impacts to 80 dBA Leq during the daytime when construction noise is exempt.

Construction noise levels to the nearby sensitive receptors have been calculated through use of the RCNM and the parameters and assumptions detailed in Section 6.1 of this report including Table H – Construction Equipment Noise Emissions and Usage Factors. The results are shown below in Table K and the RCNM printouts are provided in Appendix C.

Table K – Construction Noise Levels at the Nearby Sensitive Receptors

Construction Phase	Construction Noise Level (dBA Leq) at:		
	South Side of JFK Elementary School ¹	Multi-Family Homes to West ²	East Side of JFK Elementary School ³
Site Preparation	75	78	79
Grading	75	78	79
Building Construction	73	77	--
Paving	72	75	76
Painting	70	72	--
FTA Construction Noise Threshold⁴	80	80	80
Exceed Thresholds?	No	No	No

Notes:

¹ The south side of JFK Elementary School was analyzed at 30 feet from property line to the center of the southern solar canopy.

² The multi-family homes to the west were analyzed at 55 feet from property line to homes.

³ The east side of JFK Elementary School that is adjacent to the access road was analyzed at 15 feet from property line to the center of the community garden area. No Building Construction or Painting would occur at the access road improvement area.

⁴ The FTA Construction noise thresholds are detailed above in Table A.

Source: RCNM, Federal Highway Administration, 2006

Table K shows that the greatest noise impacts would occur during the site preparation and grading phases, with noise levels as high as 75 dBA Leq at the south side of JFK Elementary School, 78 dBA Leq at the multi-family homes to the west, and 79 dBA Leq at the east side of JFK Elementary School. The calculated construction noise levels for all phases of construction are within the FTA construction noise standard of 80 dBA. Therefore, with implementation of Project Design Feature 1 that requires construction of the 12-foot sound wall prior to the start of site preparation activities and through adherence to the limitation of allowable construction times provided in Section 18-314(e) of the City's Municipal Code, construction-related noise levels would not exceed any standards established in the General Plan or Noise Ordinance nor would construction activities create a substantial temporary increase in ambient noise levels from construction of the proposed project. Impacts would be less than significant.

Operational-Related Noise

The proposed project consists of the operation of the new fleet services facility. Potential noise impacts associated with the operations of the proposed project would be from project-generated vehicular traffic on the nearby roadways and from onsite noise sources that may create noise levels in excess of City and County standards at the nearby receptors. The noise impacts to the nearby receptors from roadway noise and from the onsite noise sources have been analyzed separately below.

Roadway Vehicular Noise Impact to Nearby Sensitive Receptors

Vehicle noise is a combination of the noise produced by the engine, exhaust and tires. The level of traffic noise depends on three primary factors (1) the volume of traffic, (2) the speed of traffic, and (3) the number of trucks in the flow of traffic. The proposed project does not propose any uses that would require a substantial number of truck trips and the proposed project would not alter the speed limit on any existing roadway so the proposed project's potential offsite noise impacts have been focused on the noise impacts associated with the change of volume of traffic that would occur with development of the proposed project.

The *Santa Ana General Plan Update Draft Program Environmental Impact Report* (Santa Ana DPEIR), prepared by Placeworks, August 2020, utilizes the following thresholds of significance to assess traffic noise impacts at sensitive receptor locations:

- Greater than 1.5 dBA increase for ambient noise environments of 65 dBA CNEL and higher;
- Greater than 3 dBA increase for ambient noise environments of 60 – 64 dBA CNEL; and
- Greater than 5 dBA increase for ambient noise environments of less than 60 dBA CNEL.

The proposed project consists of the consolidation of two existing facilities that are located within two miles of the project site into the proposed facility. The Air Quality Analysis (Vista Environmental, 2025) found that the proposed project would relocate approximately 500 daily trips to the project site. The Santa Ana DPEIR shows that McFadden Avenue currently has 20,997 ADT and Grand Avenue currently has 36,678 ADT.

In order for project-generated vehicular traffic to increase the noise level by 3 dB, the roadway traffic would have to double. In order for project-generated vehicular traffic to increase the noise level by 1.5 dB, the roadway traffic would have to increase by 50 percent. Since the proposed project would only result in a maximum of a 2.4 percent on McFadden Avenue and 1.4 percent on Grand Avenue, when compared to existing conditions, the project-related roadway noise increase is anticipated to be negligible and well below the most stringent 1.5 dBA road noise threshold. Operational roadway noise impacts would be less than significant.

Onsite Noise Impacts to Nearby Sensitive Receptors

Section 18-312 of the City's Municipal Code and Section 4-6-5 of the County's Municipal Code limits the noise levels at the nearby homes to 55 dBA Leq or 75 dBA Lmax between 7:00 a.m. and 10:00 p.m. and 50 dBA Leq or 70 dBA Lmax between 10:00 p.m. and 7:00 a.m.. Section 18-315 of the City's Municipal Code and Section 4-6-8 of the County's Municipal Code specifies that the noise standard for schools is the same as the residential noise standard.

The nearest sensitive receptor to the project site is the John F. Kennedy Elementary School (JFK School) that is adjacent to the north side of the project site. There are also the multi-family homes that are as near as 55 feet west of the project site. Onsite operational noise impacts to the nearby sensitive receptors have been calculated based on the methodology detailed above in Section 6.2 of this report. Table L shows the calculated operational noise levels at the nearby sensitive receptors and the noise calculation printouts are provided in Appendix E.

Table L – Operational Noise Levels at the Nearby Sensitive Receptors Prior to Mitigation

Noise Source	Calculated Noise Levels ¹ at:			
	School to North		Multi-Family Homes to West	
	Average Noise (dBA Leq)	Max Noise (dBA Lmax)	Average Noise (dBA Leq)	Max Noise (dBA Lmax)
Service Bays	36.1	56.5	36.8	57.2
Siren in Service Bay	37.9	64.5	38.9	65.5
Bus Bays	42.1	53.4	38.1	49.4
Compressor at Service Bays	37.6	56.8	37.9	57.1
Body Shop	43.1	53.6	48.2	58.7
Compressor at Body Shop	37.9	45.6	42.7	50.4
Metal Fabrication Shop	41.5	62.1	44.0	64.7
Rooftop Mechanical Equipment	36.1	56.6	38.6	59.1
Max or Combined Noise Level¹	48.9	64.5	51.5	65.5
City and County Noise Standards (Day/Night)²	55/50	75/70	55/50	75/70
Exceed City and County Noise Standards (Day/Night)?	No/No	No/No	No/Yes	No/No

Notes:

¹ The calculated noise levels include noise reduction provided by the proposed 12-foot high cmu wall (see Project Design Feature 1).

² The City noise standards were obtained from Section 18.312 of the Municipal Code and the County noise standards were obtained from Section 4-6-5 of the Municipal Code.

Table L shows that the ongoing operation of the proposed project would create noise levels as high as 48.9 dBA Leq and 64.5 dBA Lmax at JFK Elementary School to the north and 51.5 dBA Leq and 65.5 dBA Lmax at the multi-family homes to the west. Table L shows the calculated operational noise levels would be within both the City and County noise standards at the School to the north, however the noise would exceed the average nighttime noise standards at the multi-family homes to the west. This would be considered a significant impact.

Mitigation Measure 1 has been provided that would require the Body Shop and Metal Fabrication Shop to operate with all exterior doors closed between the hours of 10:00 p.m. and 7:00 a.m..

Table M shows the calculated operational noise levels at the nearby sensitive receptors with the noise reduction provided by closing the exterior doors to the Body Shop. As shown in Table M, with implementation of the closing of the exterior doors during the nighttime required in Mitigation Measure 1, the operation-related noise levels at the multi-family homes would be lowered to within the City and County noise standards. Therefore, with implementation of Mitigation Measure 1, the proposed project's operations-related noise would be reduced to less than significant.

Table M – Mitigated Operational Noise Levels at the Nearby Sensitive Receptors

Noise Source	Calculated Noise Levels ¹ at:				
	School to North		Multi-Family Homes to West		
	Average Noise (dBA Leq)	Max Noise (dBA Lmax)	Average Day (dBA Leq)	Average Night (dBA Leq)	Max Noise (dBA Lmax)
Service Bays	36.1	56.5	36.8	36.8	57.2
Siren in Service Bay	37.9	64.5	38.9	38.9	65.5
Bus Bays	42.1	53.4	38.1	38.1	49.4
Compressor at Service Bays	37.6	56.8	37.9	37.9	57.1
Body Shop	43.1	53.6	48.2	28.2	58.7
Compressor at Body Shop	37.9	45.6	42.7	42.7	50.4
Metal Fabrication Shop	41.5	62.1	44.0	44.0	64.7
Rooftop Mechanical Equipment	36.1	56.6	38.6	38.6	59.1
Max or Combined Noise Level¹	48.9	64.5	51.5	48.9	65.5
City and County Noise Standards (Day/Night)¹	55/50	75/70	55	50	75/70
Exceed City and County Noise Standards (Day/Night)?	No/No	No/No	No	No	No/No

Notes:

¹ The calculated noise levels include noise reduction provided by the proposed 12-foot high cmu wall (see Project Design Feature 1) and the closing of the exterior doors to the Body Shop and Metal Fabrication Shop between the hours of 10:00 p.m. and 7:00 a.m. (see Mitigation Measure 1).

² The City noise standards were obtained from Section 18.312 of the Municipal Code and the County noise standards were obtained from Section 4-6-5 of the Municipal Code.

Level of Significance Before Mitigation

Potentially significant impact.

Mitigation Measures

Mitigation Measure 1:

The project applicant shall require the Body Shop to operate with all exterior doors closed between the hours of 10:00 p.m. and 7:00 a.m..

Level of Significance after Mitigation

Less than significant impact.

7.3 Generation of Excessive Groundborne Vibration

The proposed project would not expose persons to or generation of excessive groundborne vibration or groundborne noise levels. The following section analyzes the potential vibration impacts associated with the construction and operations of the proposed project.

Construction-Related Vibration Impacts

The construction activities for the proposed project are anticipated to include site preparation and grading of the project site, building construction of the Fleet Services Building and solar panel canopy, paving of the onsite roads, disposal lot, and parking areas, and application of architectural coatings. The nearest offsite structure where people may sit, which makes them much more susceptible to vibration, would be

the school structure located as near as 30 feet from the proposed access road to McFadden Avenue improvements that would add approximately 50,000 square feet of paved roadway adjacent to the east side of JFK Elementary School.

Since neither the City or County General Plans or Municipal Codes provide any vibration standards for construction activities, Caltrans guidance that is detailed in Section 4.2 has been utilized, which defines the threshold of perception from transient sources at 0.25 inch per second PPV.

The primary source of vibration during construction would be from the operation of a vibratory roller. From Table J above a vibratory roller would create a vibration level of 0.21 inch per second PPV at 25 feet. Based on typical propagation rates, the vibration level at the nearest offsite structure (30 feet away) would be 0.17 inch per second PPV. The vibration level at the nearest offsite structures would be below the 0.25 inch per second PPV threshold detailed above. Impacts would be less than significant.

Operations-Related Vibration Impacts

The proposed project would consist of the on-going operation of the new fleet services facility. The on-going operation of the proposed project would not include the operation of any known vibration sources. Therefore, a less than significant vibration impact is anticipated from the operation of the proposed project.

Level of Significance

Less than significant impact.

7.4 Aircraft Noise

The proposed project would not expose people residing or working in the project area to excessive noise levels from aircraft. The nearest airport is John Wayne Municipal Airport that is located as near as 3.3 miles south of the project site. The project site is located outside of the 60 dBA CNEL noise contours of both of this airport. A less than significant impact would occur from aircraft noise.

Level of Significance

Less than significant impact.

APPENDIX C

RCNM Model Construction Noise Calculations

Roadway Construction Noise Model (RCNM), Version 1.1

Report date: 11/7/2025
Case Description: OCPW New Fleet Services Facility - Site Preparation

---- Receptor #1 ----

Description	Land Use	Baselines (dBA)		
		Daytime	Evening	Night
South Side of JFK School	Commercial	55.3	50.1	50.2

Description	Impact Device	Usage(%)	Equipment		Receptor Distance (feet)	Estimated Shielding (dBA)
			Spec Lmax (dBA)	Actual Lmax (dBA)		
Dozer	No	40		81.7	36	6.8
Dozer	No	40		81.7	86	6.8
Dozer	No	40		81.7	136	6.8
Backhoe	No	40		77.6	186	6.8
Front End Loader	No	40		79.1	236	6.8
Tractor	No	40	84		286	6.8
Tractor	No	40	84		336	6.8

Equipment	Calculated (dBA)		Results			
	*Lmax	Leq	Noise Limits (dBA)			
			Day		Evening	
			Lmax	Leq	Lmax	Leq
Dozer	77.7	73.7	N/A	N/A	N/A	N/A
Dozer	70	66	N/A	N/A	N/A	N/A
Dozer	66.2	62.2	N/A	N/A	N/A	N/A
Backhoe	59.3	55.4	N/A	N/A	N/A	N/A
Front End Loader	58.8	54.9	N/A	N/A	N/A	N/A
Tractor	62.1	58.1	N/A	N/A	N/A	N/A
Tractor	60.7	56.7	N/A	N/A	N/A	N/A
Total	78	75	N/A	N/A	N/A	N/A

*Calculated Lmax is the Loudest value.

Roadway Construction Noise Model (RCNM), Version 1.1

Report date: 11/7/2025
Case Description: OCPW New Fleet Services Facility - Site Preparation

---- Receptor #2 ----

Description	Land Use	Baselines (dBA)			Equipment Spec Lmax (dBA)	Actual Lmax (dBA)	Receptor Distance (feet)	Estimated Shielding (dBA)

Report date: 11/7/2025
Case Description: OCPW New Fleet Services Facility - Paving

---- Receptor #3 ----

Description	Land Use	Baselines (dBA)		
		Daytime	Evening	Night
East Side of JFK School	Commercial	58.9	56.6	56.7

Description	Impact Device	Usage(%)	Equipment		Receptor Distance (feet)	Estimated Shielding (dBA)
			Spec Lmax (dBA)	Actual Lmax (dBA)		
Concrete Mixer Truck	No	40		78.8	21	6.8
Concrete Mixer Truck	No	40		78.8	71	6.8
Paver	No	50		77.2	121	6.8
Paver	No	50		77.2	171	6.8
Paver	No	50		77.2	221	6.8
Roller	No	20		80	271	6.8
Roller	No	20		80	321	6.8
Tractor	No	40	84		371	6.8

Results

Equipment	Calculated (dBA)		Noise Limits (dBA)			
	*Lmax	Leq	Day Lmax	Leq	Evening Lmax	Leq
Concrete Mixer Truck	79.5	75.6	N/A	N/A	N/A	N/A
Concrete Mixer Truck	69.0	65.0	N/A	N/A	N/A	N/A
Paver	62.7	59.7	N/A	N/A	N/A	N/A
Paver	59.7	56.7	N/A	N/A	N/A	N/A
Paver	57.5	54.5	N/A	N/A	N/A	N/A
Roller	58.5	51.5	N/A	N/A	N/A	N/A
Roller	57.0	50.1	N/A	N/A	N/A	N/A
Tractor	59.8	55.8	N/A	N/A	N/A	N/A
Total	80	76	N/A	N/A	N/A	N/A

*Calculated Lmax is the Loudest value.

Roadway Construction Noise Model (RCNM), Version 1.1

Report date: 11/7/2025

Case Description: OCPW New Fleet Services Facility - Painting

---- Receptor #1 ----

		Baselines (dBA)					
Description	Land Use	Daytime	Evening	Night			
South Side of JFK School	Commercial	55.3	50.1	50.2			
					Equipment		
		Impact		Spec	Actual	Receptor	Estimated
		Device	Usage(%)	Lmax	Lmax	Distance	Shielding
Description				(dBA)	(dBA)	(feet)	(dBA)
Compressor (air)		No	40		77.7	36	6.8

Results

Equipment		Calculated (dBA)		Noise Limits (dBA)			
		*Lmax	Leq	Day Lmax	Leq	Evening Lmax	Leq
Compressor (air)		73.7	69.7	N/A	N/A	N/A	N/A
	Total	74	70	N/A	N/A	N/A	N/A

*Calculated Lmax is the Loudest value.

---- Receptor #2 ----

Description	Land Use	Baselines (dBA)					
		Daytime	Evening	Night			
Homes to West	Residential	55.8	53.1	52.5			
Description		Impact Device	Usage(%)	Equipment			Estimated Shielding (dBA)
				Spec Lmax (dBA)	Actual Lmax (dBA)	Receptor Distance (feet)	
Compressor (air)		No	40		77.7	61	0

Results

Equipment		Calculated (dBA)		Noise Limits (dBA)			
		*Lmax	Leq	Day Lmax	Leq	Evening Lmax	Leq
Compressor (air)		75.9	72.0	N/A	N/A	N/A	N/A
	Total	76	72	N/A	N/A	N/A	N/A

*Calculated Lmax is the Loudest value.

APPENDIX G – VMT SCREENING MEMORANDUM

MEMORANDUM

Date:	October 9, 2025	GTS: 250516
To:	Chambers Group	
From:	GTS	
Subject:	New Fleet Services Facility Project – Santa Ana, Orange County Vehicle Miles Traveled (VMT) Screening Memorandum	

This memorandum describes the Vehicle Miles Traveled (VMT) screening analysis for the proposed new fleet services facility project in the City of Santa Ana, Orange County per the VMT guidelines of the County of Orange as well as the VMT guidelines of the City of Santa Ana.

1. Project Description

The project proposes the development of a new fleet services facility (Project) that will be a new stand-alone building for the Orange County Public Works Fleet Services Division. The proposed Project will be located at 1400 S. Grand Avenue in the City of Santa Ana (Figure 1).

The OC Fleet Services offices are currently located at 445 Civic Center West and 1102 East Fruit Street in the City of Santa Ana. The proposed Project will relocate and consolidate the existing facilities to an Orange County-owned land parcel. The Project would serve the fleet vehicles of the Orange County Public Works OC Fleet Services Division.

The Fleet Services Facility would create a centralized, modern hub for the County's fleet operations and would include one building (45,706 square foot SF) containing vehicle maintenance bays, administrative staff offices, technician workspaces, and storage spaces. The proposed Fleet Services Facility would also include a future Facility Operations building (20,000 SF), a future solar panel canopy (10,000 SF), surface parking spaces, extended access road, and a police car disposal lot for police cars when they are decommissioned and sold to auction.

The proposed Fleet Services Facility would have the address 1310 South Grand Avenue and the future Facility Operations Building would have the address 1324 South Grand Avenue.

2. Background and Screening Criteria

In 2013, the state of California passed Senate Bill 743 (SB 743). SB 743 established July 1, 2020 as the statewide implementation date. Starting July 1, 2020, jurisdictions can no longer use Level of Service (LOS) to determine significance of transportation impacts under the California Environmental Quality Act (CEQA).

Both the County of Orange and the City of Santa Ana have identified Vehicle Miles Traveled (VMT) as the metric for transportation impact analysis in all traffic studies in accordance with California Environmental Quality Act (CEQA) and California Senate Bill 743 (SB 743). Projects may be screened out from completing a VMT analysis if they have the potential to reduce VMT per service population and

result in a less-than-significant transportation impact. Projects that are not screened out will be required to complete a VMT impact analysis. The County's and City's screening criteria are presented below.

Figure 1. Project Location and Vicinity (Source: Chambers Group)

2.1 County of Orange VMT Screening Criteria

The County of Orange VMT assessment guidelines are specified in the *Guidelines for Evaluating Vehicle Miles Traveled Under CEQA, September 2020*. Per the County's guidelines an initial VMT project screening is needed to determine if a full VMT analysis is required. Land development projects that have one or more of the following attributes may be presumed to create a less than significant impact on transportation and circulation:

- Project in High-Quality Transit Area (HQTAs): The project is within 0.5 mile (mi) of a Transit Priority Area (TPA) or an HQTAs, unless the project is inconsistent with the RTP/SCS, has a floor-to-area ratio (FAR) less than 0.75, provides an excessive amount of parking, or reduces the number of affordable residential units.
- Neighborhood Retail Project: The project involves local-serving retail space of less than 50,000 square feet.
- Affordable Housing Project: The project is 100 percent affordable-housing units.
- Low VMT Area Project: The project is in low VMT areas per the most recent Orange County Traffic Analysis Model (OCTAM) version showing the proposed project is within a low VMT area.
- Small Project: A project generates 500 or fewer average daily trips (ADT).
- Public Facilities: The development of institutional/government and public service uses that support community health, safety or welfare are also screened from subsequent CEQA VMT analysis.

2.2 City of Santa Ana VMT Screening Criteria

The City of Santa Ana's VMT assessment guidelines are specified in Resolution 2019-049 *Vehicle Miles Traveled Thresholds of Significance For Purposes of Analyzing Transportation Impacts Under the California Environmental Quality Act*. Per the City's guidelines an initial VMT project screening is needed to determine if a full VMT analysis is required. The following criteria are used to determine if the project can be screened out from a VMT assessment:

- Projects which serve the local community and have the potential to reduce VMT, such as neighborhood K-12 schools and local-serving retail less than 50,000 sq. ft. (Charter schools are excluded from this criteria).
- Projects that generate less than 110 net daily trips.
- Projects located within Transit Priority Areas (TPAs). Due to the many high quality transit routes in the City, much of the City is a transit priority area.
 - TPAs are defined as a ½ mile radius around an existing or planned major transit stop (e.g. Metrolink Station, Streetcar Station, etc.) or an existing stop along a high quality transit corridor. The City guidelines provide a map of Santa Ana TPAs.
 - High Quality Transit Areas (HQTAs) are defined as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.
 - Projects that are in TPAs will also be required to complete a secondary screening step to verify the proposed project's consistency with the assumptions from the RTP/SCS. This consistency can be a land use review (e.g. are the proposed land uses already included in the RTP/SCS) or can be reviewed from a VMT/SP perspective (e.g. does the resulting land use increase or

decrease the VMT/SP in the Traffic Analysis Zone (TAZ) compared to the RTP/SCS assumptions).

- Projects located in a low-VMT generating TAZ. Low-VMT TAZs per Santa Ana's threshold of significance are any TAZs generating VMT 15 % below the Orange County average. The City guidelines provide a map showing the VMT/SP in Santa Ana as compared to the Orange County average. These projects will require two additional secondary screening steps:
 1. Verify that the proposed land use is consistent with the existing land use that is generating low VMT/SP. This will include a land use (type, density, demographics, etc.) comparison.
 2. Verify that the proposed land use is consistent with RTP/SCS assumptions or the project decreases VMT/SP compared to the RTP/SCS.

In addition, the City guidelines provide a map that shows areas in the City that cannot be screened out by being located in a TPA or low-VMT generating area and identify locations where VMT analysis would be required.

3. Project VMT Screening

The above County and City screening criteria were used to screen the new fleet services facility project as follows.

3.1 Project VMT Screening Per County of Orange Guidelines

3.1.1. Project in High-Quality Transit Area (HQTa)

Although the project is within a HQTa, the project has a floor- to-area ratio (FAR) of less than 0.75. As such this criterion is not met.

3.1.2. Neighborhood Retail Project

As the project is not a neighborhood retail, this criterion is not met.

3.1.3. The project involves local-serving retail space of less than 50,000 square feet

As the project does not involve locally serving retail, this criterion is not met.

3.1.4. Affordable Housing Project

As the project is not an affordable-housing development, this criterion is not met.

3.1.5. Low VMT Area Project

While the Low VMT Areas of the County of Orange Guidelines, do not feature areas within the Santa Ana City limits, the City of Santa Ana guidelines (Figure 3) show that the project is in low VMT area (15% below OC Regional Average). **As such, this criterion is met.**

3.1.6. Small Project that generates 500 or fewer average daily trips (ADT)

The project is anticipated to generate over 500 ADT based on the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition) trip rates of 22.59 daily trips per 1000 SF for government office buildings (Land Use Code 730) alone. As such, this criterion is not met.

3.1.7. Public facilities and public service uses that support community health, safety or welfare

The project under consideration fits this category as a publicly serving project that enhances community health, safety, and welfare by supporting alternative modes of transportation (transit, walking, and biking). The project contributes to reduction in use of personal vehicles thereby directly reducing vehicle miles traveled. **This criterion is met.**

3.2. Project VMT Screening Per City of Santa Ana Guidelines

3.2.1. Projects which serve the local community and have the potential to reduce VMT

The project at hand serves the local community and has the potential to reduce VMT since convenient transit service will encourage more users to shift from personal vehicles to transit. This will in turn result in reduction in VMT. **This criterion is met.**

3.2.2. Projects that generate less than 110 net daily trips.

The project is anticipated to generate over 110 net daily trips based on the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition) trip rates of 22.59 daily trips per 1000 SF of government office building (Land Use Code 730) alone. As such, this criterion is not met.

3.2.3. Projects located within Transit Priority Areas (TPAs)

The new fleet services facility project is located within a TPA. Figure 2 below shows that the new site is located within half mile around high quality bus stops per the City's guidelines. The project is also consistent with the assumptions from the RTP/SCS per SCAG GIS Parcel Locator Database (<https://rdp.scag.ca.gov/parcel-locator>). **As such, this criterion is met.**

Figure 2. Santa Ana Transit Priority Areas Showing Project site located within a TPA

Source: City of Santa Ana Resolution 2019-049 Vehicle Miles Traveled Thresholds of Significance For Purposes of Analyzing Transportation Impacts Under the California Environmental Quality Act

3.2.4. Project located in a low-VMT generating TAZ

The new fleet services facility project is in a low-VMT generating TAZ. Figure 3 shows that the new site is located in a low-VMT TAZ per Santa Ana's threshold of significance (TAZ generating VMT 15% below the Orange County average) according to the VMT/SP map provided by the City guidelines. The proposed land use is also consistent with the existing land use and with RTP/SCS assumptions as noted earlier. **As such, this criterion is met.**

Figure 3. Project site located in a low-VMT generating TAZ

Source: City of Santa Ana Resolution 2019-049 Vehicle Miles Traveled Thresholds of Significance For Purposes of Analyzing Transportation Impacts Under the California Environmental Quality Act

3.2.5. Project located outside Santa Ana development areas that cannot be screened

The new fleet services facility project is located outside the areas in Santa Ana that cannot be screened out by being located in a TPA or low-VMT generating. Figure 4 shows that the new site is located outside of Santa Ana areas where VMT analysis is required per the City's guidelines.

Figure 4. Project site located outside Santa Ana development areas that cannot be screened

Source: City of Santa Ana Resolution 2019-049 Vehicle Miles Traveled Thresholds of Significance For Purposes of Analyzing Transportation Impacts Under the California Environmental Quality Act

4. Conclusion

Based on the VMT screening analysis presented above, the proposed new fleet services facility project is presumed to have a less than significant transportation impact both per County and City Guidelines. Therefore, the proposed project is screened out from VMT analysis.

August 21, 2025

Mr. Andrew Salas, Chairman
Gabrieleño Band of Mission Indians - Kizh Nation
P.O. Box 393
Covina, CA 91723

VIA CERTIFIED MAIL

Subject: AB 52 Notification for the New Fleet Services Facility (Project)

Dear Chairman Salas:

Orange County Public Works (OCPW), OC Development Services/Planning provides this notice pursuant to the provisions of Assembly Bill 52 and Section 21080.3.1(d) of the Public Resources Code, requiring formal notification of projects in the geographic area that is traditionally and culturally affiliated with your tribe. Pursuant to Public Resources Code Section 21080.3.1, California Native American tribes have 30 days from receipt of this notification to request consultation with OC Development Services/Planning regarding possible significant effects that implementation of this project may have on Tribal Cultural Resources.

OCPW Fleet Services Division proposes to develop a new Fleet Services Facility (Project) that will be a new stand-alone building to service the OCPW fleet vehicles. The OC Fleet Services offices are currently operating out of two separate locations in the City of Santa Ana. The proposed Project will relocate and consolidate the existing facilities to an Orange County-owned land parcel where the County Operations Center and County Data Center are located - 1400 S. Grand Avenue in Santa Ana (See Figure 1). This Project would create a centralized, modern hub for the County's fleet operations and would include one building containing vehicle maintenance bays, administrative staff offices, technician workspaces, and storage spaces. The proposed Fleet Services Facility structure would also include the future Facility Operations building, a future solar panel canopy, surface parking spaces, an extended access road, and a police car disposal lot for police cars when they are decommissioned and sold to auction.

The total size of the Project site disturbance would be approximately 200,000 square feet (4.59 acres) (See Figure 1). It is anticipated that a maximum of five (5) feet of existing earth material in the currently undeveloped Project site, excluding the proposed access roads, would be excavated and backfilled with engineered fill. Approximately 500 cubic yards of soil would be excavated for foundations of the New Fleet Facility. In addition, construction of the proposed Project will take approximately 18 months and is anticipated to be completed in late 2027.

Should you have any questions related to this project, please contact me at Virginia.Gomez@ocpw.ocgov.com or (714) 667-1614, or contact Cindy Salazar at Cindy.Salazar@ocpw.ocgov.com or (714) 667-8870.
